**25925. SCHEERPELTZ, OTTO.** Die paläarktischen Arten der Gattung *Ancyrophorus* Kr. (Col. Staphylinidae). (Norsk entomologisk tidsskrift, 1950. Bd. 8, hefte 1-3, p. 53-76, illus.) **Title tr.:** Palaearctic species of the genus *Ancyrophorus* Kr. (Col. Staph.).

Contains a table for the determination of 17 palaearctic species of rove beetles of the genus *Ancyrophorus*, with brief data on their distribution in Europe, Asia (Siberia and Turkestan) and Africa; five new species are described in the second part of this paper, including *A. strandi* n. sp. native to Målselv, northern Norway and Finnish Lapland.

**Copy seen:** DA; MH-Z.

**25926. SCHEFFER, JOHANNES, 1621-1679.** The history of Lapland, wherein are shewed the original manners, habits, marriages, conjurations, &c. of that people. Oxford, At the Theatre, 1674. 2 p. 1., 147, [1] p., front., illus., fold. map

English translation of Scheffer's *Laponia* 1673, 378 p. (copy at ICN, MH, NN), omitting quotation of "narratives . . . put down at great length in the very words of his authors." Also published

in French (1678) and German (1675), and another English (1751) translation.

On the basis of literature, records and discussion with Lapps, the author, professor at Uppsala University, gives a brief account of history and geography of Swedish Lapland, followed by an extensive study of Lappish religious, social and material culture: chapters on their pagan and christian beliefs and practices, government, trading customs and fairs, language; houses, diet and clothing; hunting, weapons, handicrafts and occupations; marriage and death customs, child-rearing; their reindeer, animal and plant life of the Lappish habitat. Includes throughout wood-cut illustrations.

**Copy seen:** DLC.

**25927. SCHEFFER, VICTOR BLANCHARD, 1906-** . Cryptorchid fur seals. (American midland naturalist, Nov. 1951. v. 46, p. 646-48, illus.)

Describes behavior, body proportions, dentition and pelage of males of *Callorhinus ursinus* with infantile testes (cryptorchidism), from the Pribilof Islands.

**Copy seen:** DGS; DSI-M.

**25928. SCHEFFER, VICTOR BLANCHARD, 1906-** . Experiments in the marking of seals and sea-lions. [Washington, 1950]. p. 1., 33 p., illus. (U. S. Fish and Wildlife Service. Special scientific report: Wildlife. no. 4) Mimeographed.

Report on usefulness and techniques of branding, tagging, shearing, painting and punching seals; results (at time of writing, available only for the Alaska fur seal) showed over 90 per cent of adult males return to their native rookery. Bibliography (28 items).

**Copy seen:** DL.

**25929. SCHEFFER, VICTOR BLANCHARD, 1906-** . The food of the Alaska fur seal. (North American Wildlife Conference. 15th, Mar. 6-9, 1950, San Francisco. Transactions, 1950. p. 410-21, illus.)

"Summary of current information on the food of" *Callorhinus ursinus* (L.), taken from accounts of naturalists during the past fifty years; includes description of feeding habits, analyses of stomach contents, and food habits in captivity. Bibliography (20 items).

**Copy seen:** DLC.

**25930. SCHEFFER, VICTOR BLANCHARD, 1906-** . Growth layers on the teeth of Pinnipedia as an indication of

age. (Science, Sept. 1950. v. 112, no. 2907, p. 309-311, illus.)

**Contains** report of a study made on the Alaskan fur seal, *Callorhinus ursinus* (L.) on the Pribilof Islands, Bering Sea. The right, upper canine, or "fang" was selected for study, since its growth-ridges are most clearly displayed. The tooth, its parts and growth are described. Only the root grows in length, the pulp depositing dentine or ivory in the root canal until, approximately at the age of 10, the canal is filled. Deposition is strongest in the winter and creates one ridge (visible on the outside of the root) each winter. The growth ridges represent accurately the age up to four, exceptionally to seven years. A preliminary survey of teeth from other pinnipeds suggests that similar conditions exist among them. Growth marks on other hard parts of mammals are briefly reviewed. Bibliography (3 items).

**Copy seen:** DA.

**25931. SCHEFFER, VICTOR BLANCHARD, 1906-** . Growth of the testes and baculum in the fur seal, *Callorhinus ursinus*. (Journal of mammalogy, Nov. 1950. v. 31, p. 384-94, incl. 2 plates, diags.)

Discussion of "certain gross aspects of the sexual development" of male seals, based on studies by the U. S. Fish and Wildlife Service (beginning in 1940) on the anatomy and behavior of marked, known-age Alaska fur seals. Conclusion notes a steady rate of growth of the baculum; that distribution of bacular lengths is evidence of the distribution of ages in commercial killings; and that baculum samplings may become an important new tool in analyzing the age composition of the killings. Bibliography (7 items).

**Copy seen:** DSI-M.

**25932. SCHEFFER, VICTOR BLANCHARD, 1906-** . A mammoth tooth from Alaska. (Nature magazine, Jan. 1952. v. 45, no. 1, p. 6, illus.)

**Contains** a note on a mammoth cheek-tooth weighing nearly four pounds, found on the beach of St. Paul Island, Alaska. Mammoth remains have not been found on this island since 1890, and are rare on the Pribilof Islands. The animal's origin from the mainland and possible routes are discussed.

**Copy seen:** DLC.

**25933. SCHEFFER, VICTOR BLANCHARD, 1906-** . Measurements of sea otters from Western Alaska. (Journal of mammalogy, Feb. 1951. v. 32, p. 10-14)

Results of study of 120 specimens of *Enhydra lutris*, mostly skulls, showing measurements for adults of both sexes, newborn and one-year-old young, sex differences, dentition, etc. Bibliography (4 items). **Copy seen:** DGS; DSI-M.

**25934. SCHEFFER, VICTOR BLANCHARD, 1906-** . Reflections on the skull of the sea otter. (Nature magazine, Mar. 1950. v. 43, p. 151-52, illus.)

Notes on the purple color retained by the skull and on its anatomy.

**Copy seen:** DGS; DSI-M.

**25935. SCHEFFER, VICTOR BLANCHARD, 1906-** . The rise and fall of a reindeer herd. (Scientific monthly, Dec. 1951. v. 73, no. 6, p. 356-62, illus., tables, diags.)

**Contains** a study of reindeer placed in 1911 by the U. S. Government on St. Paul and St. George, of the Pribilof Islands. Their numerical increase, very spectacular on St. Paul Island, and subsequent decline 1930-1950, are traced and analyzed. Decline in the amount of lichens, due to the excessive number of animals ("at least three times the carrying capacity of the range") is believed to be the main cause of the decline of the St. Paul herd; the factors responsible for the less abrupt decline on St. George are not quite clear. Bibliography (6 items).

**Copy seen:** DA.

**25936. SCHEFFER, VICTOR BLANCHARD, 1906-** . Sea birds eaten by Alaska cod. (Murrelet, Jan.-Apr. 1942. v. 23, p. 17)

Cites cases of birds found in stomach contents of *Gadus macrocephalus* in Bering Sea and Aleutian waters.

**Copy seen:** DSI-M.

**25937. SCHEFFER, VICTOR BLANCHARD, 1906-** . The striped dolphin *Lagenorhynchus obliquidens* Gill 1865, on the coast of North America. (American midland naturalist, Nov. 1950. v. 44, p. 750-58, illus.)

List with all available data from 32 records of this species occurring in waters between Valdez, Alaska and Mexico; detailed description of the species and notes on food and reproduction; with a bibliography (20 items).

**Copy seen:** DGS; DSI-M.

**25938. SCHEFFER, VICTOR BLANCHARD, 1906-** , and F. WILKE. Validity of the subspecies *Enhydra lutris nereis*, the southern sea otter. (Wash-

ington Academy of Sciences. Journal, Aug. 1950. v. 40, p. 269-72, illus.)

Detailed discussion of the California species, with comparative data and remarks on the sea otters of Alaska, the Aleutian and Commander Islands.

**Copy seen:** DGS; DLC.

**25939. SCHEFFER, VICTOR BLANCHARD, 1906-**, and others. Vitamin A in selected pale-colored livers of Alaska fur seals, 1948. Washington, U. S. Govt. Print. Off., 1950. [il], 8 p. (U. S. Fish and Wildlife Service. Special scientific report—Fisheries no. 32) Other authors: Neva L. Karriek, and F. Bruce Sanford.

Contains a study of 51 livers of the Alaska fur seal (*Callorhinus ursinus*) selected for their pale color. They were found to contain 2.4 millions "spec" units of vitamin A per pound, and 3.9 per cent oil; the vitamin A potency of the liver oil ranged from 4,170 to 634,000 units; the paleness of the liver appears to be correlated with high vitamin A potency and high oil content. Bibliography (3 items).

**Copy seen:** DI.

**25940. SCHEFFER, VICTOR BLANCHARD, 1906-**. Winter injury to young fur seals on the northwest coast. (California fish and game, Oct. 1950. v. 36, no. 4, p. 378-79, illus.)

Analysis of causes of an unusually high mortality among yearling seals, *Callorhinus ursinus*, based on over 700 bodies washed ashore along the Washington-Oregon coast in winter of 1950, including some tagged as seal pups on Pribilof Islands in 1949. Author concludes (from U. S. Weather Bureau data) that severe prolonged storms were mainly responsible.

**25941. SCHELL, IRVING ISRAEL, 1906-**. Foreshadowing the severity of the iceberg season off Newfoundland. (Royal Meteorological Society, London. Quarterly journal, Apr. 1952. v. 78, no. 336, p. 271-73, 2 tables)

Contains a discussion of the view, expressed by Sir G. Walker (*Arctic Bibliography*, No. 19082) on the apparent breakdown of relationships in world weather, which have figured in foreshadowing the severity of iceberg seasons off Newfoundland. The author, whilst admitting that some factors in apparent

control of the ice have substantially weakened, thinks that others have strengthened in the recent period. Bibliography (3 items). **Copy seen:** DLC.

**25942. SCHELL, IRVING ISRAEL, 1906-**. On some temperature trends in Iceland, northern Europe, and north-eastern U.S.A. associated with prolonged periods of severe and light ice off Iceland. Woods Hole Oceanographic Institution, Contract N6onr-27705, Technical Report, Nov. 1950. 43 p. tables, chart.

"Annual mean temperatures have been smoothed by obtaining 10-year averages, and these data for 11 decades (1831-1940) and one incomplete decade (1941-1949) have been compiled for Archangel, Bergen, Copenhagen, Edinburgh, Helsinki, Leningrad, Moscow, New Haven, Oslo, Stockholm, Stykkisholm and Vardø. These temperatures have been correlated with ice data for seas around Iceland, Archangel and Vardø for current, subsequent and previous decades. No relation could be found between ice conditions and temperatures of the previous decade but temperature anomaly in decade subsequent to severe ice conditions was generally negative, and after light ice, positive. An attempt is made to explain these relations on the basis of currents of the North Atlantic and Arctic. Effect of cities on temperature records over long periods is discussed in appendix."—*Meteorological abstracts and bibliography*, July 1952. v. 3, no. 7, p. 716-17. Bibliography.

**Copy seen:** DWB.

**25943. SCHELL, IRVING ISRAEL, 1906-**. Polar ice as a factor in seasonal weather. (In: U. S. Weather Bureau. Reports on critical studies of methods of long-range weather forecasting, pub. as: Monthly weather review, Supplement, no. 39, 1940. W. B. no. 1268, p. 26-51)

"Summary and discussion of the work of numerous investigators."—*Meteorological abstracts and bibliography*, Jan. 1951. v. 2, no. 1, p. 45.

**25944. SCHELL, IRVING ISRAEL, 1906-**. The problem of the iceberg population in Baffin Bay and Davis Strait and advance estimate of the berg count off Newfoundland. (*Journal of glaciology*, Mar. 1952. v. 2, no. 11, p. 58-59)

Contains discussion of factors which affect the forecasting of the number of

icebergs off Newfoundland from iceberg population in the Baffin Bay - Davis Strait waters, including recent estimates made on the basis of a meteorologic formula. **Copy seen:** DLC.

**25945. SCHELL, IRVING ISRAEL, 1906-**. Stability and mutual compensation of relationships with the iceberg severity off Newfoundland. (American Geophysical Union. Transactions, Feb. 1952. v. 33, no. 1, p. 27-31, 4 tables)

"Previous studies of different authors show that a relationship exists between the air pressure gradient, Labrador-South Greenland and the iceberg severity off Newfoundland. The author gives a physical interpretation and makes a stability test of this relationship. Other relationships are examined. A formula, based on data prior to 1927 and considering four factors, is derived with  $r=0.80$ . This formula is tested for the period 1927-1951. A good agreement is found, especially for years with a small number of icebergs."—*Meteorological abstracts and bibliography*, May 1952. v. 3, p. 453-54. Bibliography (8 items).

**25948. SCHERR, GEORGE H.** The effect of environmental temperature on cortisone toxicity for mice. (Science, Dec. 12, 1952. v. 116, no. 3025, p. 685, table)

Contains a report on mice kept for eight days at temperatures ranging from  $37^{\circ}\text{C}$ . to  $-7^{\circ}\text{C}$ ., and inoculated during the experiment with cortisone acetate. The toxic effects of the drug were enhanced by increased environmental temperature, while low temperatures ( $-5^{\circ}$  to  $7^{\circ}$ ) eliminated the toxic effects; all treated mice, male and female, survived the eight-day incubation period, whereas controls were all dead by the second day. A clinical use of this behavior is suggested.

**25950. SCHILLER, EVERETT L.** Studies on the helminth fauna of Alaska, I. Two new cestodes from Sabine's gull (*Xema sabini*). (Journal of parasitology, June 1951. v. 37, p. 266-72, incl. 2 plates)

Descriptions of *Haploparaxis xemae* and *Hymenolepsis haldemani*; key to

genus *Haploparaxis* and discussion of morphology of the worms found in gulls at Pt. Barrow, Alaska and near Admiralty Bay east of Pt. Barrow. Bibliography (8 items). **Copy seen:** DSI-M.

**25951. SCHILLER, EVERETT L.** Studies on the helminth fauna of Alaska, V. Notes on Adak rats (*Rattus norvegicus* Berkenhout) with special reference to helminth parasites. (Journal of mammalogy, Feb. 1952. v. 33, p. 38-49, illus., 2 plates, sketch map).

Contains report of a study conducted, in conjunction with animal-borne disease investigations by the Arctic Health Research Center, U. S. Public Health Service, Anchorage, Alaska. It was made during May 1950 with the aim to obtain data on the helminth parasites of the brown rat, which apparently became established at Adak in 1946. 224 rats were examined and five species of helminth worms were recovered from 122 animals, including *Trichinella spiralis* which infect 54 per cent of the rats. Detailed information on these helminth infections is presented, together with an ecology of the local rats, especially their relationship to other introduced mammals; suggestions as to extermination and control are made. Bibliography (8 items). **Copy seen:** DGS.

**25952. SCHILLER, EVERETT L.** Studies on the helminth fauna of Alaska, VI. The parasites of the emperor goose (*Phalacrocorax auritus* L.) with the description of *Hymenolepis philactes*, n. sp. (Journal of parasitology, Apr. 1951. v. 37, p. 217-20, incl. plate).

Record of three species of the cestode *Hymenolepis* collected from 16 of "probably the least known of American geese," during Aug.-Sept. 1950 on St. Lawrence Island, with discussion of morphology. Bibliography (5 items).

**Copy seen:** DSI-M.

**25953. SCHILLER, EVERETT L.** Studies on the helminth fauna of Alaska, VIII. Some cestode parasites of the Pacific kittiwake (*Rissa tridactyla* Ridgway) with the description of *Haploparaxis rissae* n. sp. (Helminthological Society of Washington. Proceedings, 1951. v. 18, no 2, p. 123-25, illus.)

Contains record and description of some species of tapeworms found in 37 kittiwakes collected at St. Lawrence Island (Bering Sea). A hitherto unknown species, found in the intestine of a single

host, is described. Bibliography (3 items).

**Copy seen:** DSG.

**25954. SCHILLER, EVERETT L.** Studies on the helminth fauna of Alaska, IX. The cestode parasites of the white-fronted goose (*Anser albifrons*) with the description of *Hymenolepis barrowensis*, n. sp. (Journal of parasitology, Feb. 1952. v. 38, no. 1, p. 32-34, plate)

Contains a description of a new species of tapeworm, found in the small intestine of geese near Point Barrow, Alaska; 37 birds were examined during spring of 1950 and 1951; eight of these were infected with the new parasite; two other known species of *Hymenolepis* were found among the geese. Bibliography (3 items). **Copy seen:** DA.

**25976. SCHOLANDER, PER FREDRIK, 1905-**, and others. Adaptation to cold in arctic and tropical mammals and birds in relation to body temperature, insulation, and basal metabolic rate. (Biological bulletin, 1950. v. 99, p. 259-71, tables, diags.) **Other authors:** Raymond Hock, Vladimir Walters and Laurence Irving.

Maintenance of constant body temperature was found to depend on a balance between heat production and heat dissipation and consequently there are three possible avenues for climatic adaptation, by (1) body to air gradient, (2) heat dissipation and (3) metabolic rate.

There is no evidence of adaptive, low-body temperature in arctic mammals and birds, and the body-to-air gradient can be adapted only by means of behavioral thermoregulation. The basal metabolic rate is not influenced by such factors as temperature gradient and insulation (which largely determine the heat loss), and is hence inadaptable to climate, like the body temperature. The phylogenetic adaptation to cold (or hot) climate has taken place only through factors that regulate heat dissipation, notably the fur and skin insulation.—From author's summary. Bibliography (46 items).

**Copy seen:** DSG.

**25977. SCHOLANDER, PER FREDRIK, 1905-**, and others. Body insulation of some arctic and tropical mammals and birds. (Biological bulletin, 1950. v. 99, p. 225-36, illus., diags.) **Other authors:** Vladimir Walters, Raymond Hock and Laurence Irving.

Insulation measurements on raw skins of 16 arctic and 16 tropical animals are given. A good correlation was found between thickness of fur and insulation. The smaller arctic mammals (lemmings, weasels) have much less insulation than the larger. From the size of the fox to the size of the moose, the same insulation was found per surface area. Seal blubber when submerged in water retains the same good insulation as in 0° C. air. Bear fur, because of wetting of the skin, increases heat transfer by 25-30 per cent when submerged. The beaver is better off as it retains a layer of air next to the skin. Bibliography (16 items).

**Copy seen:** DSG.

**25978. SCHOLANDER, PER FREDRIK, 1905-**, and others. Heat regulation in some arctic and tropical mammals and birds. (Biological bulletin, 1950. v. 99, p. 237-258, illus., tables, diags.) **Other authors:** Raymond Hock, Vladimir Walters, Fred Johnson and Laurence Irving.

A series of arctic and tropical mammals and birds at Point Barrow (71° N.) and Panama (9° N.) was subjected to various air temperatures in a respiration chamber where their heat production was determined. The larger arctic mammals and birds showed no increase of metabolism at -30° C. and observations on sleeping animals suggest that their zone of thermoneutrality extends to -40° C. or -50° C. Smaller arctic species show a high critical temperature and metabolic heat production increases slowly with

lowering of temperature. Experiments also showed that the heat loss below the critical temperature is proportional to the body-to-air gradient. This means that the overall insulation reaches a maximum at the critical temperature, and from then on, the heat loss follows essentially Newton's law of cooling. The very broad zone of thermoneutrality of the larger arctic species (+30° C. to -40° C.) is discussed and evaluated and compared with tropical forms.—From author's summary. Bibliography (43 items). **Copy seen:** DSG.

**25984. SCHUSTER, RUDOLF M.** The Hepaticae of the east coast of Hudson Bay (notes on nearctic Hepaticae, II). Ottawa. 1951. 62 p., 8 plates, tables. (Canada

National Museum. Bulletin no. 122. Biological series no. 42.)

Contains a report on 74 species of liverworts of the subclass *Jungermannia* and *Marchantia* collected in 1939 and 1948 by Dr. John Marr, between 54° and 60° N.; 35 are new to the region; in addition four are new to America and one undescribed. Distribution tables and phytogeographic classifications of the species follow the taxonomic list. Bibliography (43 items).

**Copy seen:** DSI.

**25985. SCHUSTER, RUDOLF M.** Notes on nearctic Hepaticae IV. *Scapania spitzbergensis* and *Scapania convexula* in North America. (Bryologist, Sept. 1951. v. 54, no. 3, p. 162-80, illus., map)

Contains a study of the two species based on varied material. It is concluded that *S. convexula* is a synonym of *S. spitzbergensis*, the separation of the two species having been based on fragmentary literature only; earlier errors in description are corrected, and the species placed in the new Sectio *Rufidulae*. It is reported from Greenland, arctic Eurasia, and Maine (U. S. A.). Bibliography (10 items).

**Copy seen:** DA.

**25986. SCHWABE, EDWARD L., and others.** The effect of prolonged exposure to low temperature on the basal metabolism of the rat. (Journal of nutrition, Feb. 10, 1938. v. 15, p. 199-210) Other authors: F. E. Emery and F. R. Griffith, Jr.

Contains an account on experiments with rats exposed to temperatures of 7° to 12° C. for the greater part of the day, during a period of 15-60 days. An increase of metabolic rate (as measured at thermal neutrality) by 11-16 per cent, and increased body temperature and retardation of gain in body weight, were observed; the respiratory quotient was not affected. Bibliography (25 items.)

"A brief presentation on how the solar eclipse of Sept. 1950 was observed with radar at Attu, Alaska, during a gale in spite of heavy rain."—*Meteorological abstracts and bibliography*, Aug. 1951. v. 2, no. 8, p. 708. **Copy seen:** DLC.

**25991. SCIENTIFIC AMERICAN.** Whale cardiogram. (Scientific American, Oct. 1952. v. 187, no. 4, p. 68-70, illus.)

Contains an account regarding a cardiogram of a young beluga taken by Paul D. White with a specially built harpoon and the usual electrocardio-

graphic equipment. The electrocardiogram was recorded for five minutes while the animal thrashed violently; the heart-beat was 20 per minute; the result is compared with those from other animals and man. **Copy seen:** DLC.

**25992. SCOGGAN, H. J.** Botanical investigations along the Hayes River route, northern Manitoba (Canada. National Museum. Bulletin 123, its Annual report for 1949-50, pub. 1951, p. 139-61, illus.)

Results of a survey by a four-man party led by the author in summer 1949 from Norway House along the Nelson-Echimamish-Hayes River system to York Factory on Hudson Bay; returning by the Nelson River and closing the season in the Wekusko and Tramping Lake area. An historical sketch and chronology is given of travels on this formerly important canoe route, which included plant collecting. Population and climate are sketched briefly and the general physiographic character of the area traversed. Three major plant communities are described and notes summarizing collections made at different points in the survey present a general picture of the types of vegetation developed in various ecological habitats. The extensive collections represent 435 species and numerous varieties of vascular plants about 45 per cent showing considerable northward extension in Manitoba from previously published reports. This material will be treated fully by the author in a flora of Manitoba. Further collections (138 of cryptograms, also mammals and birds) were made for the museum. Bibliography (17 items). **Copy seen:** DLC.

**25993. SCOTT, JAMES C. W.** The gyro-frequency in the Arctic E-layer. (Journal of geophysical research, Mar. 1951. v. 56, no. 1, p. 1-16, 7 fig., 4 tables, 15 equations)

"Calculation of the gyro-frequency in the E layer at Canadian Arctic ionospheric recording stations gives a lower magnetic field than that obtained by extrapolation of the terrestrial field measured at ground level, and at one station (Resolute Bay) a large semidiurnal variation with maxima at 06 and 18 hr. local time. Ray path deflections which can explain similar effects previously reported for the F layer cannot be responsible in the E layer because of the opposite sense of this deviation and because of the small layer-thickness. Moreover, no semi-

diurnal variation was found in the F layer. It is shown that these new W layer phenomena may be due to a variable concentration of heavy ions rising to over 4000 times the density of free electrons."—*Meteorological abstracts and bibliography*, June 1952. v. 3, p. 550-51. Bibliography (8 items).

**Copy seen:** DLC; DWB.

**25994. SCOTT, JAMES C. W.** The solar control of the E and F1 layers at high latitudes. (Journal of geophysical research, Sept. 1952. v. 57, p. 369-86, diagrs.)

Contains results of measurements of "seasonal, latitude, and solar-cycle dependence of the E-layer sensitivity to solar angle and the sub-solar frequency." "The monthly mean critical frequencies of the E and F1 layers at high latitudes are shown to vary diurnally with solar angle according to a modified Chapman law." Based on data from Resolute Bay, Baker Lake, and Fort Chimo, Canadian Eastern Arctic, and elsewhere in North America. **Copy seen:** DGS.

**25995. SCOTT, JAMES C. W., and H. C. BAZETT.** Temperature regulation. (Annual review of physiology, 1941. v. 3, p. 107-130)

Contains a review "dealing with some of the literature from Aug. 1938 to July 1940 and a few later papers." The material covers research on: the nervous system and thermal control, receptors and sensation, physical regulation, chemical regulation, slow adaptation to environmental temperature, and hypothermia. Bibliography (123 items).

**25996. SCOTT, PETER MARKHAM, 1909-**. Wild geese and Eskimos: a journal of the Perry River Expedition of 1949. London, Country Life, N. Y. Scribner's, 1951. 254 p. 13 plates, 3 maps (incl. end papers).

Narrative of a three-man expedition (with Harald Hanson and Paul Queneau) to the Perry River (flowing into Queen Maud Gulf at about 67°41' N. 102°42'

W.) region of Mackenzie District June-Aug. 1949. The purpose was mainly to study the birds particularly geese, also to make general geographical, meteorological, zoological, botanical and anthropological observations in an area little traveled by white man, and reported as breeding ground of Ross's and other geese by A. Gavin (see *Arctic Bibliography*, No. 5580, 5581). Scott gives here day-do-day account of the party's camp life and travels, terrain, vegetation, etc., the appearance, living habits and social characteristics of the Kogmuit Eskimos, who worked with the party or exchanged visits. Most of the report of work in this notable breeding ground, however, comprises detailed observations of the various species of birds; plumage flight, courting, and nesting habit, brood counts, etc., many of which are illustrated by photograph or author's sketch. The birds (about 50) and mammals (7) seen are listed, p. 247-48. Useful index at end.

**26007. SEDERHOLM, JAKOB JOHANNES, 1863-1934.** Sur la géologie quaternaire et la géomorphologie de la Fennoscandia. Helsingfors, 1911. 66 p., illus., diagr., 2 fold maps. (Finland. Geologiska kommission. Bulletin, v. 5, no. 30) **Title tr.:** On the Quaternary geology and the geomorphology of Fennoscandia.

Contains sections on: the Quaternary deposits in Fennoscandia; extension of the continental glacier in northern Europe and the transport of Fennoscandian erratic blocks; ice movement in Fennoscandia; lines of fracture and their significance in Fennoscandian geomorphology; extent of the sea at the end of the glacial period; postglacial submersion. Bibliography (75 items). **Copy seen:** DLC.

**26008. SEDERHOLM, JAKOB JOHANNES, 1863-1934.** Weitere Mitteilungen über Bruchspalten mit besonderer Beziehung zur Geomorphologie von Fennoskandia. Helsingfors, 1913. 66 p., illus., 1 plate, diags., maps. (Finland. Geologiska kommission. Bulletin, v. 6, no. 37) **Title tr.:** Further reports on rifts with special reference to the geomorphology of Fennoscandia.

The author deals with the deep troughs in the Fennoscandian lakes and their connection with the rift areas and compares the conditions with those of other countries and modern seismic areas (Italy, California, Alaska). The role of land ice in exposing rifts is discussed. The Norwegian shore area, the bays and larger lakes are analyzed in connection with rift formations. The river valleys are concluded to have been preformed by rifts and generally the geomorphology of Fennoscandia is viewed as having been effected largely by forces within the earth rather than by atmospheric agents. **Copy seen:** DLC.

**26009. SEDLETŠKIĬ, I., and A. MALOVICHKO.** Rôle of colloidal-disperse

minerals in the processes of ground freezing. (Akademiia nauk SSSR. Comptes rendus (Doklady), 1945. nouv. ser., v. 47, no. 2, p. 130-33)

"Experiments were performed on samples of the clay minerals nontronite and kaolinite, on samples of unconsolidated rocks containing large proportions of these minerals, and on sand to show the physical effects of freezing and thawing. Structures peculiar to the individual clay minerals were developed in the pure samples which were recognizable in the natural specimens, modified due to the presence of other minerals."—Geological Society of America, *Bibliography and index of geology*, 1945-46, v. 11, p. 295.

**26010. SEDLETŠKII, I., and others.** X-ray studies of processes of ground freezing. (Akademiia nauk SSSR. Comptes rendus. (Doklady), 1945. nouv. ser., v. 47, no. 4, p. 294-95) *Other authors:* Mikhail Ivanovich Sumgin, and A. Malovichko.

"Specimens of soil, prepared from air-dry clay and sand and moistened to a desired degree, were sealed into cardboard boxes measuring 115 x 80 x 10 mm. The specimens were x-rayed before freezing, after standing for 24 hrs. in a chamber at -10° C., and after thawing for 24 hrs. at room temperatures. Results suggest that x-ray pictures may be used to study changes occurring in the internal structure of specimens and the method of moisture migration within soil samples."—SIPRE.

**26014. SELANDER, NILS STEN EDWARD, 1891-** Floristic phytogeography of south-western Lule Lappmark (Swedish Lapland) I-II. Kärleväxtfloran i Sydvästra Lule Lappmark. Uppsala, Almqvist & Wiksell, 1950. 2 v. (1: 22 p., illus., 12 plates. 2: 152, 2 p., 448 text maps. (Acta phytogeographica suecica, 27-28) **Title tr.:** (v. 2) Flora of vascular plants of southwestern Lule Lappmark.

Contains (in v. 1) historical notes on botanical exploration of Lule Lappmark, geobotanical survey with data on the origin of the flora, local distribution, migration of plants, altitudinal belts, climatic changes, index of the species and a bibliography (440 items). Vol. 2, issued in Swedish, gives a taxonomic survey of the flora, including a Latin description of *Antennaria lapponica* n. sp., and notes on habitats and detailed local distribution of 496 species of vascular plants, also index, cited literature (p. 143-46) maps. English summary, v. 2, p. 139-42. **Copy seen:** MH-A.

**26015. SELIAKOV, N. I.** Nekotorye nabludeniia nado l'dom i profsessami, sviazannymi s ego obrazovaniem. (Akademii nauk SSSR. Doklady, 1950. t. 70, p. 821-24, illus.) *Title tr.:* Some observations on ice and the processes connected with its formation.

Discussion of the method of formation of ice crystals, freezing and thawing, types and evaporation of crystals, and energy released during freezing; based on observations and studies of arctic rivers and seas. "Ice crystals are made visible for study purposes by 3 methods: (1) desiccation, (2) etching or outlining, and (3) light project. It was determined by these methods that ice crystals were a few cm. in size. The orientation of ice crystals in relation to the freezing water surface and the physical properties of melting ice, were determined by developing the melting pattern method, a technique first devised by Tyndal. Two methods of freezing water are described: (1) side cooling and (2) surface cooling with constant pressure underneath the ice. Two types of "freezing out" (vymorazhivanie) are distinguished: (1) when evaporation takes place during the crystallization process, and (2) when evaporation originates from the solid phase surface, after the liquid has been totally crystallized. The latter process is called sublimation."—SIPRE.

**26016. SELIGMAN, GERALD.** The growth of glacier crystal. (Journal of glaciology, Mar. 1949. v. 254-66, tables, graphs, diagrs.) Also published (apparently in briefer form) as: International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo, 1948. Procès-verbaux des séances. t. 2. Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 216-20.

"Ice crystal growth in the tongues of alpine glaciers was observed. Crystal sizes were obtained from pencil rubbings on paper. The areal proportions of crystals of each size present were recorded on a histogram. Crystal sizes observed at or near the glacier surface increase from bergschrund to snout. The relationship of crystal size to length of travel and to glacier speed indicate that while time must influence crystal growth in active ice, there are also other factors. Larger crystals were found in longer glaciers and smaller crystals in steep glaciers. Scan-

dinavian type glaciers lacked uniformity in crystal size in a given area."—SIPRE. Bibliography (20 items).

*Copy seen:* DGS; DLC.

**26017. SELIGMAN, GERALD.** Growth of glacier crystals. (Nature, Mar. 1948. v. 161, no. 4091, p. 485, illus.)

Contains preliminary note to the as yet unsolved problem of the growth of ice crystals in glaciers. In observations on alpine glaciers, the author found that (a) the crystals in flowing ice are not nearly so large as often reported; (b) under certain conditions they are "surprisingly small"; (c) there seems to be some relationship between crystal size and the inclination of the glacier bed. A simple method of recording crystal size of glaciers (by rubbings with a pen on paper held against the ice) is given.

*Copy seen:* DA.

**26018. SELIGMAN, GERALD.** The growth of the glacier crystal: some further notes. (Journal of glaciology, Mar. 1950. v. 1, p. 379-81)

"The root mean square diameter of crystals inside a tunnel in the Z'Mutt Glacier was 1.7 cm. The measurement 8 m. vertically above this point was 2.2 cm., or an increase of nearly 30 per cent. It was observed in the Upper Grindelwald Glacier that smaller crystals are caused by strain from greater stresses. Ice crystals rapidly grew in size when the stress was removed. A rubbing made of a blue band in an artificial tunnel in the Bas Glacier d'Arolla showed a sharply defined central zone containing large crystals. Smaller crystals were found in the areas adjacent to the central zone. Rubbings made along apparent shear planes showed very small crystals. It was observed that cracks and incipient crevasses in the ice may pass through the centers of crystals."—SIPRE.

**26020. SELLE, WILBUR ARTHUR, 1901-** . Body temperature; its changes with environment, disease, and therapy. Springfield, Ill., Thomas [1952]. 112 p., illus. (American lecture series, publication no. 147. American lectures in physical medicine)

Contains a comprehensive but concise review of the field, with chapters on: (1) the significance of temperature regulation and heat control; normal values and variations of body temperature; (2) heat production (basal heat production, chemical regulation, effect of food intake, role of liver, viscera and muscular activity); (3) heat dissipation (physical heat loss, physiological adjustments); (4) integrated temperature control; (5) neural mechanisms of temperature regulation (central and peripheral); (6) internal disturbances of heat regulation; (7) environmental disturbances of heat regulation (high and low temperatures); (8) allergies (to cold or heat). All chapters (excepting 6, p. 48-62) have a direct or indirect bearing on the problem of the organism's response to environmental (low) temperature. Bibliography (222 items).

**Copy seen:** DLC.

**26021. SELLERS, E. A., and others.** Acclimatization and survival of rats in the cold: effects of clipping, of adrenalectomy and of thyroidectomy. (American journal of physiology, May, 1951. v. 165, p. 481-85) Other authors: S. S. You, and Newell Thomas.

Contains an account of animals kept at  $1^{\circ} \pm 1.5^{\circ}$  C. Clipped rats died within 3-23 hours when exposed to this cold, but when acclimatized for two or more months prior to clipping, most survived 17 days and some even two months; similarly adrenalectomized and thyroidectomized rats survived cold exposure much longer after previous acclimatization. The essential role of the thyroid and cortical hormones, for survival in the cold, and as indicated by the experi-

ments, is discussed. Bibliography (4 items).

**Copy seen:** DLC.

**26022. SELLERS, E. A., and S. S. YOU.** Effect of "acclimatization" on survival of rats in the cold after shaving, after adrenalectomy and after thyroidectomy. (Revue canadienne de biologie, Mars 1951. v. 10, p. 86)

Contains an abstract on experiments showing that rats subjected to cold, then shaved and further exposed to cold, survived much longer than similar animals not "acclimatized" prior to shaving. Survival time of adrenalectomized and thyroidectomized rats following cold exposure was also longer in acclimatized animals.

**Copy seen:** DLC.

**26023. SELLERS, E. A., and R. WEN YOU.** Prevention of dietary fatty livers by exposure to a cold environment. (Science, Dec. 30, 1949. v. 110, p. 713)

Contains a brief report on experiments with rats, fed a severely hypolipotropic diet and kept at a temperature of  $2.5 \pm 1^{\circ}$  C. The animals deposited 3-4 times less fat in their livers than controls kept at room temperature, due apparently to the increased total metabolic rate in the cold environment.

**Copy seen:** DLC.

**26024. SELLERS, E. A., and S. S. YOU.** Role of the thyroid in metabolic responses to a cold environment. (American journal of physiology, Oct. 1950. v. 163, p. 81-91, 4 fig.)

Contains a study on the relationship of the thyroid and pituitary of adult rats to changes in metabolism taking place in a cold environment ( $1.5^{\circ} \pm 1^{\circ}$  C.); the experiments indicate that while increased thyroid activity is not essential for an elevation in metabolic rate, part of the elevation observed depends on the presence of thyroid hormone and is associated with the ability of the animals to survive. Bibliography (10 items).

**Copy seen:** DLC.

**26025. SELLERS, E. S.** The selection of lubricants for use at low temperatures. (Polar record, July 1951. v. 6, no. 42, p. 237-44, incl. tables, 10 refs.)

"A lubricating oil must be sufficiently viscous to maintain a lubricating film and should exhibit strong adherence to the bearing surfaces. The oil should have no corrosive action on the component parts and should resist oxidation. It should not dissolve water and it should not represent a fire hazard. Engine oils

must be diluted with kerosene or gasoline at temperatures as low as  $-70^{\circ}$  F to prevent solidification. Synthetic oils of the polyalkylene glycol type have proven advantages in engine starting, but develop sludge under operating conditions. Naphthene base oils with special additives have been used though a slight solubility for water is evident. Similar oils and special greases have been developed for general machinery and hydraulic transmission gears. Non-spreading lubricants developed for instruments and fine mechanisms may solidify at low temperatures and may on occasion be replaced by powdered graphite. The best low temperature lubricant must be designed for the specialized application."—SIPRE. Bibliography (10 items).

**26042. SEPPÄNEN, O.** Tuntsa-Oulankajoen sekä Jäämeren päävesistöä-luoden metsät ja niiden kaukokuljetus-mahdollisuudet. Helsinki, 1939. 91 p. plates, illus., maps, tables. (Acta forestalia fennica, 47:5) *Title tr.:* The forests in the Tuntsa-Oulanka and Arctic Ocean main waterway regions and long-distance transport.

*Contains* data on the forests and transportation of timber in these northeastern (Oulanka River ca. 66°30' N. 28°30' E., Tuntsa, ca 67°40' N. 29°40' E.) and northern regions of Finland, an area (49,642 sq. km.) from which raw materials for the wood industry are economically important to the country, but in which the usual method of transporting felled timber to the place of consumption (i. e. by floating down the waterways) is precluded because the main rivers flow southeastward through Russian territory into the White Sea, or northward into the Arctic through a section of Finland where the population is sparse, industry undeveloped, highways few, and no railroads. For each district of these main watersheds, the author gives detailed information on types of forest,

amounts of timber (including prospective felling quantities for the next ten years), ownership (state forests, etc.), market. For each district, he analyzes the local transportation problems, working out possible solutions, in most cases suggesting routes and methods (usually a combination of floating and portaging by motor ferry), estimating distances, time required and costs for transporting the timber to Finnish industrial centers. Summary in English, p. 80-91.

**26056. SETÄLÄ, EMIL NESTOR, 1864-1935.** K. B. Wiklund (1868-1934). (Finnisch-ugrische Forschungen. Anzeiger, 1934. Bd. 22, no. 1-3, p. 52-54)

*Contains* obituary outlining life and achievements of this Swedish scholar who contributed very much to linguistic research on the Lapp language.

*Copy seen:* DLC; InU.

**26057. SETÄLÄ, EMIL NESTOR, 1864-1935.** Lappische Lieder aus dem XVII-ten Jahrhundert, nach den Originalhandschriften herausgegeben von E. N. Setälä. (Suomalais-ugrilainen seura. Aikakauskirja, 1890. v. 8, p. 105-123) *Title tr.:* Lapp songs from the 17th century, edited from the original manuscripts by E. N. Setälä.

*Contains* (1) Lappish text of two songs by a native, "Oloff Matzon Lappo," found by Setälä in the University of Uppsala Library in the winter of 1888, first published by Johannes Scheffer q. v., in his *Laponia* 1673; (2) text of a Lapp bear ritual song also found in Uppsala; (3) an anonymous communication "about the song used by Lapps when they strike the magic drum."

*Copy seen:* DLC; InU.

**26058. SETÄLÄ, EMIL NESTOR, 1864-1935.** Otto Donner, in memoriam. (Suomalais-ugrilainen seura. Aikakauskirja, 1911-12. v. 27, p. 15-32; the same in Finnish on p. 1-14) *Title tr.:* To the memory of Otto Donner.

*Contains* a speech in French and Finnish delivered at the annual meeting of the Finno-Ugric Society, Dec. 2, 1909. Donner's life (1835-1909) is outlined and tribute paid to his contribution to knowledge of Finno-Ugric languages: his principal work, *Vergleichendes Wörterbuch der finnisch-ugrischen Sprachen*, 1874-88 (q.v.) never outdated, his sojourn among the Lapps of Sorsele in 1874, collecting their songs (*Lappalaisia lauluja*, 1876, q.v.) and other publications; his activities as founder of Finno-Ugric Society in 1883 and its president for many years.

*Copy seen:* DLC; InU.

**26059. SETÄLÄ, EMIL NESTOR, 1864-1935.** Ueber Art, Umfang und Alter des Stufenwechsels im Finnisch-Ugrischen und Samojedischen. (Finnisch-ugrische Forschungen. Anzeiger, 1912. Bd. 12, no. 1-3, p. 1-128) *Title tr.:* The kind, extent and age of the stage shift in the Finno-Ugric and Samoyedic languages.

*Contains* a linguistic investigation of the stage shift of nasals, half vowels, liquidæ, consonants and sybilants, also their combinations, in the Finno-Ugric and Samoyedic languages. The stage shift in all these languages is mainly of the same nature and kind, evidently a common inheritance from olden times, proving the relationship between the Finno-Ugric and Samoyedic languages.

**26068. SHACKLETON, PHIL.** Whaling in Manitoba. (Forest and outdoors, Dec. 1947. v. 43, no. 12, p. 406-407, illus.)

Contains notes on the white whale and the whaling methods practiced in the Hudson Bay; protective measures adopted at the international meeting in Washington in 1946; beginning of whaling in Manitoba.

**Copy seen:** DLC.

**26069. SHAKHOV, A. A.** Zemledelie i kormodobyvanie Pechorskogo kraia i puti ikh razvitiia; issledovaniia i materialy. Moskva, 1936. 183 p., illus., maps. **Title tr.:** Agriculture and fodder-production of the Pechora region and ways of their development; studies and materials.

Contains an outline of the climate, soil and flora of the Komi district based on the literature and on investigations (particularly in the valley of the Pechora River and its left tributaries, the Izhma, Tsylna, Pizhma) of the Academy of Sciences expedition under Prof. Shennikov in 1934.

In his account of agriculture in the Pechora region, author deals with the area under cultivation, northern limits, relation to climate and land forms; also with cultivation practices, etc., potential increase in productivity by a northward extension of cultivation, and by improved methods. Types of soils are characterized and areas available for cultivation noted. Conditions of cattle breeding, fodder-growing areas and pasture lands are described and measures

recommended for their improvement. Bibliography (175 items). Summary and contents table in English.

**26073. SHARP, ROBERT PHILLIP, 1911-** Accumulation and ablation on the Seward-Malaspina Glacier system, Canada-Alaska. (Geological Society of America. Bulletin, July 1951. v. 62, p. 725-43, illus. (map, diagrs.), 2 plates)

Partial report on work done on Project Snow Cornice, 1948-49. The glacier system and physical setting near the international boundary between 59°40'–60°30' N. are described. The nature of accumulation and ablation and (in detail) the methods used for measuring both are discussed, as well as results of accumulation surpluses, daily gross ablation, material balance and wastage deficit below the firn limit. "Upper Seward Glacier is the principal source of nourishment for Malaspina Glacier, a piedmont sheet on the southern Alaska coastal plain. The system covers 1,650 sq. mi. and involves 450 cu. mi. of ice. Accumulation in the upper glacier is mostly by direct snowfall. The annual accumulation surplus was measured by digging pits in various parts of the surplus area and measuring thickness and density of the annual firn area. Ablation was measured by placing a calibrated rod in the firn to a depth of 50 cm. and noting the daily decrease. Annual surplus in the accumulation area was 69 in. of water in 1948-1949, 26 in. of water in 1947-48, 17 in. in 1946-1947, and 30 in. during 1945-1946. Daily gross ablation of firn in mid-summer on upper Seward Glacier averaged 0.30 in. of water. Daily gross ablation on clean Malaspina ice averaged 2.23 in. of water in 1949. A surplus of  $9 \times 10^{13}$  cu. in. of water resulted in the 1948-1949 budget year. The budget year 1947-1948 produced a deficit of  $2.144 \times 10^{14}$  cu. in. Under existing conditions a normal year produces a deficit of about  $2 \times 10^{14}$  cu. in. of water."—SIPRE. Bibliography (17 items).

**26075. SHARP, ROBERT PHILLIP, 1911–** . Features of the firn on upper Seward Glacier St. Elias Mountains, Canada. (Journal of geology, Nov. 1951. v. 59, p. 599-621, illus., incl. map, 2 plates)

Based on studies made at 60°23' N. 139°15' W. on the eastern part of upper Seward Glacier in Yukon Territory, as

part of Project Snow Cornice, during the summers of 1948 and 1949. "The diagenetic changes within firn, leading to an increase in density and producing structures such as ice layers, lenses, and glands, are discussed. Density increases irregularly downward in the Seward firn, with layers of exceptionally low density underlying impermeable horizontal ice masses. The mean rate of density increase with depth in the first 50 ft. is 0.0054/ft. The rate of density increase in time varies with depth and with the season. Mean density of the 1948-49 firn layer increased by 0.10 in 10 weeks during the summer of 1949, but mean density of the 1946-47 layer at a depth of 15-18 ft. increased only 0.021 in a year. On the upper Seward, the increase of firn density is caused about 25 per cent by meltwater freezing and about 75 per cent by compaction-settling within the zone of annual chilling, the upper 40-50 ft. Horizontal layers and lenses of ice in firn are formed by freezing of meltwater that has percolated downward and collected above or moved laterally along impermeable horizons. An estimated 20-25 per cent of the Seward firn is converted to solid ice by this process before passing beyond the depth of annual chilling . . ." (Author's abstract). Bibliography (24 items).

**26078. SHARP, ROBERT PHILLIP, 1911-** . Meltwater behavior in firn on upper Seward Glacier, St. Elias Mountains, Canada. (International Geodetic and Geophysical Union. Association internationale d'hydrologie scientifique. Assemblée générale de Bruxelles 1951. t. 1, p. 246-53, illus., *issued separately as:* California Institute of Technology, Division of the Geological Sciences. Contribution no. 563, 1952.)

Contains results of studies of the volume and percolation velocity of daily meltwater flow carried out by Project Snow Cornice during 1948-49. Demonstrates that vertical downward movement of meltwater occurs in a series of daily waves, and that variations in rate and volume of flow at different depths and at different times can be attributed to inhomogeneities within the firn. Concludes that year-around flow of large subglacial streams is sustained by what appears to be a normal water table relation within upper Seward glacier.

"Field studies on Malaspina Glacier were conducted in 1951 to determine how much glacier flow is due to intergranular shifting and how much to intergranular slippage. The crystallographic investigation of thin sections of surface ice by Rigsby indicated a complex, intergrown pattern excluding flowage by intergranular shifting if the same conditions existed in deeper regions of the glacier. The strong preferred optical orientation of the crystals and its relation to banding indicate slippage along glide planes in the individual crystals. Attempts were made to obtain the vertical velocity profile of the glacier to determine its mode of flowage. A vertical hole, 1000 ft. deep, was bored into the glacier with an electrically heated hot point. The drill pipe was left in the hole to measure

the subsequent deformation. A resurvey of the pipe is planned for 1952."—SIPRE.

Succinct statement of research accomplished on the Seward ice field, summer 1949, in measurement of the year's precipitation, density of firn layer, ablation, thermal studies, meltwater circulation, gravity determinations, and other glaciological problems.

*Copy seen:* DGS.

**26081. SHARP, ROBERT PHILLIP, 1911-** . Thermal regimen of firn on upper Seward Glacier, Yukon Territory, Canada. (Journal of glaciology, Mar. 1951. v. 1, p. 476-87, map, diagrs.) Based on observations during Project Snow Cornice, 1948-49.

"Temperatures were measured within the firn and ice of the upper reaches of the Seward Glacier to a depth of 204 ft. by means of the thermohms and a Wheatstone bridge. Thermal boring proved a feasible means of penetrating this glacier. The winter's chilled layer here develops a thickness of 40-50 ft. and attains temperatures of at least  $-13^{\circ}$  C. Deterioration of the chilled layer is rapid and irregular in the final phase and is attributed largely to freezing of percolating meltwater. Meltwater exerts such a powerful influence on thermal regimen that bodies of firn in environments with mean annual temperatures below freezing may, nonetheless, be geophysically temperate because of extensive warming by meltwater in summer. In both 1948 and 1949, the annual chilled layer on the upper Seward Glacier disappeared within the first 10 days of July. The slow development and rapid deterioration of diurnal crusts on firn and the lag effects at depth reproduce in miniature the behavior of the annual chilled layer. On the basis of its thermal regimen the upper Seward Glacier is geophysically temperate." (Author's Abstract) Bibliography (34 items).

**26083. SHASTIN, N. R., and A. T. PETRJAJEFF.** Rachitis bei Kindern auf der Insel Kolguyev. (Jahrbuch für Kinderheilkunde, 1933. v. 140, p. 314-26, illus., tables) **Title tr.:** Rickets among children on Kolguyev Island.

Contains report of an expedition sent to Kolguyev (date not given) by the Children's Clinic of the Medical Institute of Smolensk, Director, N. R. Shastin, which examined all children on the island up to the age of 14. Following an outline of the area, its climate, inhabitants and their diet, the problem of rickets is dealt with: 100 percent of the children are affected, viz: 20.6 per cent with light cases, 8.5 per cent with moderate, and 41.5 per cent with severe cases. 70 per cent of children 3-7 years of age, are affected with severe rickets. The cause of high rickets incidence lies in the climate and the mode of life of the Nentsy (Samoyeds). It is urged that cod-liver oil be introduced into the diet to prevent a crippling of the whole population. The idea that rickets is a rare disease in the Arctic should be revised. Scurvy, tuberculosis, child-infections and acute digestive disturbances are almost absent; respiratory diseases, rare, the authors state.

**26111. SHIMKIN, DEMITRI BORIS, 1916-** Fort Yukon, Alaska, an essay in human ecology, I. A comprehensive survey of the Fort Yukon region in the Fourth Judicial Division; its resource pattern: problems and potential. Juneau, Alaska, Alaska Development Branch, March 1951. 50 p. reproduced from typewritten copy.

"This report summarizes available information on the ethnological and historical background of the Fort Yukon region; its present general significance, and its relationship to other districts in Alaska and Canada. The discussion of the natural environment stresses the known and potential resource patterns [water-power, agriculture, timber, mining with analysis of hydrological and soil conditions]. The demographic section reviews the age and sex structure, vital statistics and population potential;

seasonal and secular mobility; public health, and education. The principal economic subjects include sources of income; the annual cycle and interrelationships of economic activities; community incomes, prices, and expenditures. Finally comes a general evaluation of socio-economic conditions and problems at Fort Yukon, some possible approaches to their solution, and brief comparisons with the problems existing in other Arctic and sub-Arctic regions."—p. 1. The report is based on materials gathered in the summer of 1949: records of 42 household units, census data, commercial price lists and operation records, medical data, etc. Bibliography (38 items).

**Title tr.:** Poisonous plants of meadows and pastures.

A comprehensive work with 27 contributing authors and as editorial board: A. F. Gammerman, I. A. Gusynin, M. M. Il'in, B. N. Klopotov, V. L. Nekrasova, A. A. Nikitin, A. A. Fedorov, and chief editor B. K. Shishkin.

*Contains* an introductory review (p. 6-18) of poisonous plants and of the chemical characteristics of poisonous substances of vegetative origin. Then follows account of poisonous plants of meadows and pastures of the U.S.S.R. (p. 19-467) with brief descriptions, data on distribution, chemical analysis, poisonous substances and toxic properties. Subdivision of poisonous plants by clinical characteristics of poisoning is given (p. 468-85); also methods of the investigation and evaluation of hay (p. 486-97). Bibliography (278 items) and indexes of Russian and Latin names are appended. Many species, native to northern regions of the U.S.S.R. are included in this study.

**26134. SHMIDT, PETR ĪUL'EVICH, 1872-1949.** On the Pacific halibut. (Akademiā nauk SSSR. Doklady, 1930. ser. A, No. 8, p. 203-208, illus., tables)

Author concludes that the Atlantic halibut does not occur in the Pacific and is replaced there by a different species.

**Copy seen:** DLC.

**26135. SHMIDT, PETR ĪUL'EVICH, 1872-1949.** A revision of the genus *Crossias* Jordan et Starks (Pisces, Cottidae). (Akademiā nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1929, pub. 1930. t. 30, vyp. 4, p. 503-506)

**Contains** a critical revision of four species of ichthyological genus *Crossias*, with a synopsis of species, critical notes and data on distribution; includes four species native to the Okhotsk Sea.

**Copy seen:** DLC; MH-Z.

**26136. SHMIDT, PETR ĪUL'EVICH, 1871-1949.** A revision of the genus *Gymnacanthus* Swainson (Pisces, Cottidae). (Akademiā nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1927. t. 28, vyp. 1, p. 25-32)

**Contains** a synopsis of the species and a critical revision of five species and three new subspecies, some having circumpolar distribution, with synonymy, critical notes and a table of measurements of two species, *G. herzensteini* and *G. detrisus*.

**Copy seen:** DLC; MH-Z.

**26137. SHMIDT, PETR ĪUL'EVICH, 1872-1949.** A revision of the genus *Hemilepidotus* Cuvier (Pisces, Cottidae) and of the allied genera. (Akademiā nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1929. t. 30, vyp. 3, p. 359-69)

**Contains** a synopsis of species and an enumeration of six species of ichthyological genus *Hemilepidotus*, with tables of measurements, synonymy and data on geographic distribution; includes five species distributed in Bering and Okhotsk Seas and Aleutian waters.

**Copy seen:** DLC; MH-Z.

**26138. SHMIDT, PETR ĪUL'EVICH, 1872-1949.** A revision of the genus *Icelus* Kröyer (Pisces, Cottidae) with the description of a new species from the Okhotsk Sea. (Akademiā nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1927. t. 28, vyp. 1, p. 1-8, illus.)

**Contains** a key to the species of the ichthyological genus *Icelus* and a critical revision of six species, including a description of *I. ochotensis* n. sp. largely distributed in northern Okhotsk Sea, and critical notes on other species occurring in Okhotsk and Bering Seas, Aleutian and Svalbard waters. (*I. bicornis* subsp. *spitzbergensis*).

**Copy seen:** DLC; MH-Z.

**26139. SHMIDT, PETR ĪUL'EVICH, 1872-1949.** A revision of the genus

*Myoxocephalus* Til. (Pisces, Cottidae) and of some allied genera of the Pacific. (Akademiâ nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1929. t. 30, vyp. 3, p. 405-426, illus.)

Contains a synopsis of genera and species of ichthyological family Cottidae and a critical revision of 20 species, including 14 of the genus *Myoxocephalus*, with descriptions of *Porocottus sellaris ochotensis* and *Myoxocephalus verrucosus ochotensis* n. subsp., tables of measurement, critical notes and data on distribution; the majority of the species are distributed in the northern Okhotsk Sea, Bering Sea and Aleutian waters.

**Copy seen:** DLC; MH-Z.

**26140. SHMIDT, PETR ÎUL'EVICH, 1872-1949.** A revision of the genus *Triglops* Reinhardt (Pisces, Cottidae). (Akademiâ nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1929, pub. 1930. t. 30, vyp. 4, p. 513-23, illus.)

Contains a synopsis of four species of ichthyological genus *Triglops*, synonymy, a description of *T. pingelli pacificus* n. subsp., tables of measurements and data on distribution in Greenland, Barents, Kara, White, Okhotsk Seas.

**Copy seen:** DLC; MH-Z.

**26141. SHMIDT, PETR ÎUL'EVICH, 1872-1949.** Ryby Okhotskogo moriâ. Moskva-Leningrad, 1950. 370 p., 48 illus., 20 plates, tables, maps. (Akademiâ nauk SSSR. Tikhookeanskii Komitet. Trudy, t. 6) **Title tr.:** The fishes of the Sea of Okhotsk.

Contains a monographic study in 5 sections: the history of research on the Okhotsk fishes (p. 19-31); the ichthyofauna of this sea (p. 32-238); its composition and distribution (p. 239-89); its origin (p. 290-313); fish fauna of Okhotsk Sea and arctic ichthyofauna (p. 314-34). The 270 forms are treated (in section 2) in a taxonomic system, data for each species comprising synonyms, morphology (including that of variations and races); occurrence, geographical distribution, etc. Section 3 deals with numerical composition compared with other seas; distribution of the fauna according to families and groups; the problem of origin of the Okhotsk fishes is dealt with (sec. 4) from a geological-historical point of view, with the cooling of the sea assumed to be an important distributive factor. Finally Okhotsk fish fauna is analyzed along similar lines in its relation

to that of the arctic seas. Bibliography (about 350 items). **Copy seen:** DLC.

**26142. SHMIDT, PETR ÎUL'EVICH, 1872-1949.** Ryby Tikhogo okeana. Ocherk sovremennykh teorii i vozzrenii na rasprostraneniie i razvitiie fauny ryb Tikhogo okeana. Moskva, Pishchepromizdat, 1948. 123 p., maps, tables.

**Title tr.:** Fishes of the Pacific Ocean. An outline of present-day theories and views on the distribution and development of the fish fauna in the Pacific Ocean.

Contains sections on the tropic and temperate regions, the fishes of Japan and the Sea of Japan; the fishes of the Okhotsk Sea (p. 74-85); fishes of Bering Sea (p. 86-95); division of the fauna of the moderate region, its origin and influence on the arctic region (p. 96-120). Bibliography (about 60 items).

**Copy seen:** DLC.

**26143. SHMIDT, PETR ÎUL'EVICH, 1872-1949.** Three new deep-sea fishes from the Okhotsk Sea. (Akademiâ nauk SSSR. Comptes rendus (Doklady), 1938. nouv. ser., v. 19, no. 8, p. 653-56)

Preliminary report on fishes collected in 1932 by research vessels of the Pacific Scientific Institute of Fisheries and the Leningrad Hydrological Institute.

**Copy seen:** DLC.

**26144. SHMIDT, PETR ÎUL'EVICH, 1872-1949.** Two new species of *Arctedellus* Jordan from the Okhotsk Sea. (Akademiâ nauk SSSR. Comptes rendus (Doklady), 1937. nouv. ser., v. 15, no. 9, p. 571-72)

Described fishes (sculpins) were collected in 1932 and are semi-bathyal in nature.

**Copy seen:** DSI-M.

**26178. SHUMACKER, HARRIS B., Jr., and others.** Studies in experimental frostbite, I. The effect of heparin in preventing gangrene. (Surgery, 1947. v. 22, p. 900-901, tables, diagrs.) **Other authors:** Beverly H. White, Earle L. Wrenn, Jr., Alfred R. Cordell and Thomas F. Sanford.

A study undertaken to verify earlier claims that heparinization is very effective

in preventing gangrene following frostbite. Domestic rabbits were used, the hind limb being immersed in an ether dry-ice mixture; degree of coldness of the mixture, as well as duration of exposure, varied. Cases in which solid freezing of limb did not take place were discarded. Various amounts of heparin in aqueous solution were administered intermittently by intravenous route. Details of each experiment; dressing; etc., are given. The results lead to the conclusion that "heparinization is a valuable, but not an invariably reliable therapeutic aid in the prevention or limitation in extent and degree of gangrene in experimental frostbite of rabbits." Bibliography (6 items).

**Copy seen:** DSG.

**26179. SHUMACKER, HARRIS B., Jr., and others.** Studies in experimental frostbite, II. Arteriograms. (Yale journal of biology and medicine, 1948. v. 20, p. 519-31, illus., tables) **Other authors:** Beverly H. White and Earle L. Wrenn.

Report on freezing experiments made on dogs' and rabbits' hind limbs for various periods and by a variety of methods, followed by making of arteriograms (technical details on p. 520-21). The experiments demonstrate a normal arterial network in extremities which survived frostbite without gangrene (due to successful anticoagulant therapy); opacification of the arterial tree was absent in the area in which a deep gangrene developed, suggesting thrombosis of the arteries in the affected area. Generally the intensity and duration of circulatory disturbances caused by cold, varied with the intensity and duration of exposure, with the extent of the area exposed, with the character of the tissue frozen and possibly with the species of animal. The experiments suggest that there is no full arterial circulation to a frozen part during the period following thawing. Bibliography (5 items).

**26184. SHVETSOV, I. F.** K voprosu o svyazi temperatury i moshchnosti vechnoy merzloty s geologicheskimi i gidrogeologicheskimi faktorami. (Akademiya nauk SSSR. Izvestiya. Seriya geologicheskaya, 1941. no. 1, p. 114-24, tables) *Title tr.*: On the relation of the temperature and thickness of permafrost to geologic and hydrogeologic factors.

"Data on permafrost temperatures and climate at 11 localities in the U.S.S.R. and Spitsbergen indicated that the temperature of the permafrost was not completely dependent on climate. Geological structures and ground water conditions are factors also in determining soil temperatures. Three basic permafrost regions are established: semi-arid regions, areas with extensive ground water, and regions with mineralized ground water. The temperature of the semi-arid regions corresponds well with the average annual air temperature. Regions with extensive ground water are characterized by temperatures higher than the average annual air temperature. The temperature of the permafrost in regions with highly mineralized ground water tends to be lower than the average annual air temperature."—SIPRE. Bibliography (4 items). Summary in English.

**26188. SIDOROV, ALEKSEI SEME-NOVICH. 1892-** Eigentumsmarken (pas) der Syrjänen. (Suomalais-ugri-lainen seura. Aikakauskirja, 1932. v. 45, no. 5, p. 1-34, 3 plates) **Title tr.:** Marks of ownership (pas) among the Zyryans.

Contains investigation based on printed sources and material collected by the author during his trips in 1919 and from the Zyryan soldiers in Leningrad in 1927-28, also on results of a survey made by a native teacher and his pupils. The ownership marks are not only cut in the ears of animals (or bound on the necks), but also imprinted on tools and implements; they are used as a boundary mark, and even accepted by the author-

ities as valid signature on legal papers. Some signs are purely geometrical, others represent stylized animals (squirrel, hare, etc.), or objects. Originally they were the sign of a clan (probably connected with totemistic ideas), later a family mark only. When a family splits, the sons add a small new mark to their father's, excepting, usually, the youngest who inherits the father's. Therefore, related families are recognizable by their signs. The Permian property marks differ considerably from the Zyryan. Illiterate Zyryan merchants keep their "account books" engraved on the sticks, the debtors being indicated by their family signs. (A calendar on a wooden sticks also is in use on the upper Vychegda). All the old persons know the property signs which are still (1932) in common use in the Districts of Pomozdin (upper Vychegda) and Udora.

**SIEROSZEWSKI, WACŁAW, 1858-1945.**

**26192. SIEROSZEWSKI, WACŁAW, 1858-1945.** Ākuty; opyt ětnograficheskago izslědovaniĀ. t. 1. S.-Peterburg, Imper. Russkago Geograficheskogo Obshchestva, 1896. xii, 720 p., 168 text illus., port., fold. map. **Title tr.:** The Yakuts; results of an ethnographical investigation.

*Contains* monographic description of country and people: physical geography, climate, vegetation, wild and domestic animals; origin, wanderings, and history of the Yakut people; their territory and numbers, etc., relations with Tungus and Russians; racial characteristics; kinds of production; food and beverages; clothing; dwellings; handicrafts and art, utensils and implements; classes according to age and wealth; how the people work; laws and justice; family, children, love and marriage; folklore; beliefs (on death and burial, shamanism, spirits, etc.). The work, though including extensive references to the literature, was based mainly on the observation and experience of the author, a landowner, with keen interest in ethnographic matters who dwelt in Verkhoyansk 1880-83, then traveled to Sredne-Kolymsk, Andylakh (eight-month sojourn), Yakutsk, the village of Bafagantaiskiĭ on the Aldan River in 1885, and the village of Namskiĭ, 1887-92;

he learned the Yakut language and thus was able to get material first-hand.

Further volume(s) are not known to have been published. Vol. 1 was also published in Polish 12 lat w Kraju Jakutów 1900 (*Arctic Bibliography*, No. 16082) and 1931 (as t. 11-12 of his *Dziela zbiorowe*, copy in DLC).

An English abstract of this work was made by W. J. Sumner (see *Arctic Bibliography*, No. 16084). This was condensed and republished as *Social life in an arctic environment*, in: Thomas, William I., ed. *Source book for social origins*, Univ. of Chicago Press, 1909, p. 74-92. **Copy seen:** CtY; DLC.

**26193. SIGAFOOS, ROBERT SUMNER, 1920-** . Frost action as a primary physical factor in tundra plant communities. (*Ecology*, Oct. 1952. v. 33, p. 480-87, incl. illus., diags.)

"Frost action, a process of sub-aerial erosion in cold climates, affects all land surfaces in tundra regions. Ice formation breaks rock into fine particles, heaves soil, thrusts unconsolidated materials, promotes solifluction of soil masses and creates new exposed surfaces. Plant communities exemplifying the effects of frost action upon vegetation can be classified according to the drainage conditions of the substratum in which they grow. Heath and dryas mats occur in areas of minor frost heaving of soil and intensive frost riving of rock in well-drained soil. Willow-birch-heath occur in areas where frost action is slight, though more intense than where heath and dryas mats prevail. Cotton grass tussock-birch-heath occur on poorly drained soils where frost action is intense and soil movement frequent. Sedge sod and willow shrub occur in boggy areas with slow downslope movements."—SIPRE. Bibliography (19 items).

**26195. SIGAFOOS, ROBERT SUMNER, 1920-**, and **D. M. HOPKINS.** Soil instability on slopes in regions of perennally-frozen ground. (National Research Council. Highway Research Board. Frost action in soils, a symposium. *Its*: Special report, 1952. no. 2 (N. R. C. pub. 213), p. 176-92, illus.)

"Processes of intensive frost action were studied on Seward Peninsula during the summers 1947-1950. Slopes subject to creep are common in permafrost areas because of poor drainage, wet soils, disturbances caused by alternate freezing and thawing, and the presence of glide planes in the regions. Vegetation cover modifies but does not prevent soil movement on slopes. Soil movement on slopes produces characteristic micro-relief features including soil terraces, soil lobes, peat-mound stripes, peat rings, tussock-birch-heath stripes, rock stripes, and swales. The degree of instability of the soil, the drainage conditions, and the danger of subsidence upon thaw can be estimated by a recognition of the significance of these features. The study of micro-relief is an aid in selecting the best of several routes for road construction."—SIPRE. Bibliography (13 items).

*Copy seen:* DGS.

**26196. SIGAFOOS, ROBERT SUMNER, 1920-**. Some botanical problems in the interpretation of aerial photographs of tundra areas. (Photogrammetric engineering, June 1950. v. 16, p. 429-31, incl. table)

"Factors required for proper interpretation of vegetation and surficial geology through use of aerial photographs are given. Photographic studies of permafrost in tundra regions is facilitated only so far as the vegetation and micro-relief forms indicate the nature of the frozen substratum."—SIPRE.

**26199. SIGURDSSON, SIGURDUR.** Tuberculosis case-finding survey of the total population of Reykjavik, Iceland in 1945. (U. S. Public Health Service. Public health reports 1947. v. 62, p. 1593-606, tables, graphs)

In 1945 a tuberculosis case-finding survey (tuberculin tests and photoroentgenograms) was conducted at Reykjavik covering the whole population of 46,000. 99.32 per cent of those expected to attend were examined. Of those examined 1.6 per 1000 were found to suffer from active tuberculosis, calling for immediate treatment and 15.2 per 1000 exhibited old tuberculous changes. All these cases were previously unknown to the Health Center. The value of surveys, like the one reported, is stressed.—From Summary.

**26200. SIGURJONSSON, JULIUS.** Epidemiologic characteristics of poliomyelitis in Iceland. (American journal of hygiene, Jan. 1950. v. 51, p. 109-125, 3 fig., 7 tables)

Contains sections on the geography, climate, population and living conditions of the area; public health and medical care; prevalence of contagious diseases; reporting of polio; its prevalence (1902-1947); seasonal and age distribution; observations on mode of spread. Widespread epidemics, severe as compared with Northern Europe and North America, and occurring at about 10 years interval, were observed. Cases are reported in every month of the year, with a maximum in the fall. A shift to older

age groups has been observed in recent years. Bibliography (17 items).

(Suomalainen eläin-ja kasvitieteellinen seura Vanamo. Eläintieteellisiä julkaisuja. Annales zoologici, 8:6) **Title tr.:** On the casual links of the migrations of the "silk-tail," *Bombycilla g. garrulus* (L.).

An analysis of the causes leading to normal, intermediary and mass migrations of this bird, which ranges far north of the Arctic Circle in Scandinavia. Remarks on its migrations in Hungary and Finland; variations in the yield of ash-tree berries and their connection with the migrations; periodic population increase and mass-migrations. Bibliography (44 items).

**Copy seen:** DLC.

**26203. SIIVONEN, LAURI.** Zur Ökologie und Verbreitung der Singdrossel (*Turdus ericetorum philomelus*, Brehm). Helsinki, 1939. 289 p., tables, diags., illus., figs. (Suomalainen eläin-ja kasvitieteellinen seura Vanamo. Eläintieteellisiä julkaisuja. Annales zoologici, v. 7, no. 1) **Title tr.:** The ecology and distribution of the song thrush (*Turdus ericetorum philomelus*, Brehm).

Contains a treatise covering the whole area where this species occurs (including northern Scandinavia) and dealing in the main with two ecological problems: (1) the relation between climate and vegetation on one hand, and the distribution and frequency of this thrush on the other; and (2) this species' requirements of its environment. For comparison several other species of thrushes are discussed. The study includes sections on: geographical distribution (breeding

and wintering areas, migrations, etc.); distribution and density in relation to the vegetation; the biology of breeding (areas and preferred localities, nest-position, -construction, -protection, eggs young, etc.); the song and factors influencing it; biology of nutrition (diet, regional and seasonal variations, etc.); general behavior of the thrush. Bibliography (over 350 items).

**26204. SILIN-BEKCHURIN, A. I.** Razvedka podzemnykh vod v oblasti veehnoi merzloty. (*In his: Spetsial'naii gidrogeologiya*. Moskva, Gosgeoizdat, 1951, p. 272-77, incl. illus., diags.) **Title tr.:** Survey of underground waters in permafrost region.

"The underground waters of permafrost are divided into suprapermafrost, intrapermafrost, and subpermafrost waters. The water above permafrost furnishes a constant supply of water during spring, summer and fall. The sources of suprapermafrost waters are the meltwaters from snow, rain, and other types of surface waters. Maximum yield is obtained during the late summer when the active layer is thawed to the maximum depth. Intrapermafrost water is water within the permafrost occurring in thick alluvial deposits near rivers or old river channels. The subpermafrost waters are divided into shallow and deep-lying waters. Shallow subpermafrost water includes alluvial waters appearing in broad valleys of large rivers where the deposits are not completely frozen. It is suggested that large nonfreezing springs, icings, and hydrolaccoliths usually fed by waters from considerable depths, be investigated during surveys for water supply."—SIPRE.

"A detailed description of the orbicular rock in Kemijärvi, with four analyses, is given. The origin of this rock by metamorphic differentiation in connection with granitization is discussed. New observations on the orbicular rock in Esbo, with one analysis are presented."—Abstract, p. 107. Bibliography (20 items).

**Copy seen:** DLC.

**26213. SIMPSON, C. J. W.** British North Greenland Expedition; report by the expedition leader on Reconnaissance of Queen Louise Land 1951. [London, 1952?]. [iii], 44 p. (mimeographed), 40 photographs, 2 fold. maps in pocket.

Contains report on a five-man expedition in July 17-Aug. 25, 1951 "to reconnoitre approaches to the northern part of Queen Louise Land and to choose a suitable base for a large expedition the following year. It was hoped to discover whether there were any lakes there fit for use by flying boats."

Following account of a flight with

P.-É. Victor to "free"-drop supplies at the inland-ice station of Expéditions polaires françaises, and another flight to parachute his own party's supplies, author describes the journey with dogs, then with back-packs, from Mörkefjord (76°55' N. 20°30' E.) across Mörkefjordsplateau and Storstrømmen (glacier) to Dronning Louises Land; reconnaissance in the region roughly 77°-77°15' N. 23°-25°30' W., and survey of a lake tentatively called Adastra Lake (77° N. 23°30' W.)

*Appendices* describe (a) geography and glaciers of the region, (b) geology, (c) flora and fauna, (d) weather (briefly noted because the party's meteorological instruments were damaged in parachute drop), (e) survey by F. R. Brooke of Adastra Lake and sketch map of Dronning Louises Land (maps in pocket). The notable photographs show geographic (particularly glaciers) wild life (musk oxen, hare), etc. mentioned in text.

**26220. SIPLE, PAUL ALLMAN 1908-** . Ice-blocked drainage as a principal factor in frost heave, slump, and solifluction. (National Research Council. Highway Research Board. Frost action in soils, a symposium. *Its:* Special report, 1952. no. 2 (N. R. C. pub. 213), p. 172-75)

*Contains* discussion of the mechanisms which operate in water-saturated soil, above the impermeable frozen layers in the soil and obstruct normal gravitational drainage. "Expansive action of diurnal freezing in the active soil zone deforms the soil and permits formation of pockets, lenses, and layers which refill with free water of ice. The thicker these free-water layers become, the greater becomes the frost heave force . . . Water accumulating at the impervious base of the active zone on sloping land tends to move the soil laterally. Soil slump occurs when the force of gravity on the sloping water-saturated soil exceeds the forces holding the soil in place. This action may be controlled by an impervious ground surface cover preventing melted snow from reaching the active layer; by drainage at the critical depth; by vertical sumps draining through frozen soil to an absorptive soil layer."—SIPRE.

*Contains* chapters on: the preparation of fur skins, spinning and needlework, weaving, girdle- and mat-making, dyeing, girdle-making from roots, bark and nettles, the preparation of birch bark for various purposes, glue-making, blacksmith and foundry work, tools for general use, native names for materials, tools and implements. Detailed description is given of various techniques, with illustrations of the tools and of persons at work. The material is based on the author's observations and refers largely to the Vasyugan (left tributary of the Ob' ca. 58° N. 80° E.) Ostyaks, though other local groups of the Ob'-Irtysh basin are well represented.

**26222. SIRELIUS, UUNO TAAVI, 1872-1929.** [Notes]. (Suomalais-ugrilainen seura. Aikakauskirja, 1901. v. 19, no. 3, p. 32-33)

*Contains* notes in French on Sirelius' travels Sept. 1899-Jan. 1900, among the Ostyaks living in the districts of Obdorsk and Surgut, on the rivers Jugan, Agan, Toromjugan, Pym, Salyan, Irtysh and Konda, where he met also some Voguls and Samoyeds. He chiefly studies the hunting and fishing techniques of these peoples, collected museum objects, made photographs, also noted mythological beliefs and folklore. His trip was sponsored by Finno-Ugric Society, and these notes appear in its report for 1900.

**26224. SIRELIUS, UUNO TAAVI, 1872-1929.** Die syrjänische Wohnung in ihren verschiedenen Entwicklungsstadien; eine vergleichende Untersuchung. (Suomalais-ugrilainen seura. Toimituksia, 1928. no. 58, p. 331-65, 34 illus.) *Title tr.:* The Zyryan dwelling in its different stages of evolution; a comparative study.

An important ethnological treatise on the dwellings of Zyryans, living on the banks of the rivers Loz'va (59°32' N. 60°25' E.), Vychegda (61°15' N. 46°35' E.), and Lokehim (61°30' N. 51°37' E.), visited by author, 1907. These people are settled agriculturalists and cattle breeders who also like to hunt in fall and winter. Their dwellings have separate rooms for humans and animals, although they are under the same roof, the common roof itself being a later development when the separate buildings were put together. The development of a stable (stall) is discussed, also the difference in type of house of the people who have landed property and those who have not. The houses are built of logs, and the village is a typical "sippendorf," not the Russian "street-village." *Copy seen:* DLC; InU.

**26225. SIRELIUS, UUNO TAAVI, 1872-1929.** Ueber das Jagdrecht bei einigen finnisch-ugrischen Völkern. Helsinki, 1914. 34 p. (Suomalais-ugrilainen seura. Toimituksia, v. 35, no. 14) *Title tr.:* On hunting rights among some of the Finno-Ugric peoples.

*Contains* a study of the hunt in Samoyed, Ostyak, Vogul, Zyryan, Lapp and Tungus groups. Hunting grounds or woods were considered common property of the whole clan, division of the hunting or snaring grounds among the individual families being a later development (e. g. among the Lapps). In regard to division of the take, a kind of communism was practiced in the primitive society, for essential game only however, e. g. wild reindeer; the smaller game (e. g. foxes) were the sole property of the successful hunter. Among Lapps and Samoyeds, hunting parties were organized with the whole clan participating, one man from each family taking part, and the take was divided in as many parts as there were tents (families) in the settlement, the head man however getting a somewhat larger share. Whoever was too lazy to take part in the

hunt, got nothing. Late-comers, or members of another hunting party, arriving after the kill (if they came not too late) got a share.

*Copy seen:* DLC; InU.

**26226. SIRELIUS, UUNO TAAVI, 1872-1929.** Ueber die Art und Zeit der Zählung des Renntiers. (Suomalais-ugrilainen seura. Aikakauskirja, 1916-20 v. 33, no. 2, p. 1-35, 6 illus.) *Title tr.:* The method and time of the domestication of reindeer.

*Contains* comparative ethnological and archeological study dealing chiefly with the Finns, Lapps, and Samoyeds, but including references to other northern Asiatic peoples; based on the author's personal observations, archeological objects and literature. The reindeer was tamed by hunters to serve as a decoy in hunting the wild reindeer, especially at the rutting season, and as a draft animal. The idea and possibility of domesticating wild reindeer probably derived from use of fenced enclosures (Lapp: *wuobman*) as a hunting technique. Prehistoric sledges found in Finnish swamps are of the same type as Samoyedic sledges of today. Those found in Finland were made of a species of pine (*Pinus cembra*) native only to northeastern European Russia. Author concludes that the reindeer was certainly used as a draft animal in the stone age, and that the Lapps probably learned reindeer husbandry from Samoyeds in northern Russia before coming to Fennoscandia. *Copy seen:* DLC; InU.

**26227. SIRELIUS, UUNO TAAVI, 1872-1929.** Über die primitiven Wohnungen der finnischen und Ob-ugrischen Völker. (Finnisch-ugrische Forschungen, 1906, Bd. 6, p. 74-104, 121-54, illus. 1-50c; 1907, Bd. 7, p. 56-128, illus. 51-85; 1908, Bd. 8, p. 8-59, illus. 85-147; 1909, Bd. 9, p. 17-113, illus. 148-217; 1911, Bd. 11, p. 23-122, illus. 218-55) *Title tr.:* The primitive dwellings of the Finnish and Ob-Ugrian peoples.

*Contains* ethnological study in five parts chiefly based on author's own investigations among the Ostyaks and Voguls, and on the literature. The first part deals with the form of the dwelling, its dependence largely on the form of production: agriculturalists have stable dwellings. The Lapps, Voguls and Ostyaks, non-agricultural peoples, have tents with a pointed roof. The materials (hides and birch-bark), form, and technique of building these tents are in-

vestigated. The second section (1907) contains among other things, descriptions of the pointed-roof tents found among the Zyryans and Karelians; the so-called "Lapp ditch" and its influence on the Karelians; also comparative references to Ostyak and Yakut dwellings. The third section (1908) deals with tents with a ridge roof (Firstdach) and rectangular (vierwändige) log-houses as found among the Ostyaks, Voguls, Zyryans, and other Finno-Ugric peoples. The native names for these structures and their parts are explained. The fourth section (1909) is a comparative study of these three types of dwellings as used by the Finns (especially Karelians), Estonians, Livonians, and Lapps, with many references also to the Zyryans and others treated extensively in earlier parts. Special attention is given to the origin of windows among the Ob-Ugrians and Zyryans. The fifth part (1911) is based on Finnish structures with extensive data (in text and illus.) on comparable forms used by the Lapps, Zyryans and others. Description is given of the interior of the log living-house, its fireplace, oven and chimney, the horizontal log ceiling, sleeping banks made of clay and wooden frames, the floor and cellar. The bath-house, formerly a living-house then used for various purposes (e. g. for domestic animals in winter), and its equipment are described, also the kiln, its outfitting and use. Summer and winter living-houses are discussed, the smoky hut (a living hut without smoke vent), its interior and equipment.

**26245. SKÖGSTRÖM, VÄINÖ.** Lumiaurojen standardisoinnista. (Teknillinen aikakauslehti, 1948. 38:10, p. 322-24, diagrs.) **Title tr.:** Standardization of snow plows.

"A committee was organized in 1943 for the purpose of standardizing the various types of snow plows. It was found that much time, effort, and money were wasted because of (1) the large variety of blades being used (30 different types); (2) the types of appliances used for propelling the plows; and (3) the various methods of connecting the plows to these appliances. The committee prepared detailed suggestions for a universal coupling for the plows, and for the standardization of the blades. It was determined that the most suitable height at which to fasten the blade was  $550 \pm 50$  mm. from the ground. The size of the holes was increased to 19 mm. The shape of the holes was made cylindrical to provide 4 different ways to fasten the blade to allow even wear. A study of the most suitable metal for use in the blade was postponed because of the poor quality of metals obtainable during the war years."—SIPRE.

**26256. SKRZYŃCKI, ADOLF.** Jakuten-bräuche. (Urquell, 1898. Ser. 3, Bd. 1, p. 6-8) **Title tr.:** The customs of Yakuts.

Contains notes on healing of eyes, performances of shamans, fear of sickness and death and abandonment of sick persons; also story told by a man who was hired as a "funeral director" by the Yakuts.

**Copy seen:** DLC; InU.

**26257. SKRZYŃCKI, ADOLF.** Der Selbstmord bei den Tschuktschen. (Urquell, 1894. Ser. 2, Bd. 5, p. 207-208) **Title tr.:** Suicide among the Chukchis.

Contains note on self-sacrifice to avert epidemics; three kinds of ritual death: by knife, lance, or lasso (strangulation); cremation of the corpse and sacrifice of a reindeer.

**Copy seen:** DLC; InU.

**26258. SKVORTSOV, V. V.** Primenenie samokhodnogo kopra dlâ rykhleniâ merzlogo grunta. (Elektricheskii stant'sii, Jan. 1952. t. 23, no. 1, p. 52) **Title tr.:** Use of an automatic pile-driver for breaking up frozen ground.

Contains a description of a pile driver, with a specially adapted dentated "digger" and its application in digging holes for electric poles.

**Copy seen:** DLC.

**26259. SKYWAYS.** Arctic survival. (Skyways, Jan. 1949. v. 8, no. 1, p. 26-27, 50-51, incl. illus.)

Contains account of 5½-day course conducted weekly from Oct. to April at Alaskan Air Command Arctic Indoc-trination School, Marks Air Force Base, Nome, Alaska. Air crewmen are taught survival techniques; construction of tundra shelters, snow caves, snow houses, etc.

**Copy seen:** DLC.

**26260. SLATER, CLARENCE S., and HENRY HOPP.** The action of frost on

the water stability of soils. (Journal of agricultural research, May 1949. v. 78, p. 341-46, tables)

*Contains* report on laboratory experiments involving freezing and thawing at different rates, repeated once and five times under various moisture conditions. The results indicate that freezing and thawing decreased the water stability of moist soils; the detrimental effect of freezing and thawing was most marked with soils of high moisture contents; the rate of freezing and thawing had no effect on loss of water stability. Practical application implies: drainage of soils to keep moisture low, reducing the depth and frequency of freezing. Bibliography (9 items).

**26268. SMIRNOV, I. I.** Osobennosti tehnika nekotorykh infektsionnykh zabolevanii v zapol'ar'e. (Klinicheskaiä meditsina, 1947. v. 25, no. 10, p. 73-75) **Title tr.:** Peculiarities of the course of some infectious diseases in polar regions.

Vorkuta (68° N. 64° E.), a rapidly growing coal-mining town and center in the Komi A.S.S.R., has a high percentage of immigrants, who had never previously lived in arctic areas. Contrary to claims otherwise, scarlet fever in the period under review (1944-47) was found as common if not commoner than in the temperate regions. Details given suggest a generally milder and shorter course of this disease with less and milder complications. One case of chicken-pox and no case of whooping cough were observed during the three-year period. Typhus and paratyphus were, contrary to expectations, sporadic; typhus appeared in a generally mild form; paratyphus A was twice as common as B. Bacillary dysentery appears as a typical, summer disease. Cases of malaria-relapse are high among people who come from malaria-infested areas. No malaria mosquitoes are reported in the region, but relapses occurred even among people who had had the disease 5-10 years earlier or had never had symptoms before. Possibility is not excluded that infected mosquitoes are carried into the area by trains or that few may even breed locally.

**26283. SMIRNOVA, E. V., and A. L. STRUTSOVSKAIA.** Vspyshka kori v zapoliarnom poselke. (Pediatriia, 1949. no. 4, p. 20-25, illus., table) **Title tr.:** An outbreak of measles in an arctic village.

Contains a report on an outbreak of measles in July-Aug. 1948 in an unidentified village of 144 persons mostly Nentsy (Samoyeds) with a few Russians. 88 fell sick, 11 died; 100 per cent of those who had no measles previously were affected; immunity had in some cases persisted for 30 years; the disease had appeared a year previously in a settlement, 600 kilometers to the south, and gradually made its way northward. In adults, clinical symptoms were severe, with characteristic intestinal symptoms and a deep disturbance of the general condition; periods of incubation and of the appearance of symptoms were normal. Lack of dead among adults (contrary to literary sources) is attributed to the fact that the outbreak occurred in the summer, to good aeration and living conditions. Three of the dead had scarlet fever at the same time. One case was observed in a five-day old child, born to a sick mother, suggesting an intra-uterine infection.

**26284. SMITH, C. H.** The problem of control for topographic mapping on northern Canada. (Surveying and mapping, Oct.-Dec. 1951. v. 11, no. 4, p. 368-73)

Contains outline of Canadian mapping policy and aims in small-, medium- and large-scale mapping, by the Deputy Director of Military Survey Army Headquarters, Ottawa. Then follows a presentation of the special problems of mapping in the northern Canadian mainland and arctic islands. The lag in primary geodetic control due to difficult terrain and transportation problem is discussed. Three types of areas are described and transportation found best adapted to the terrain is noted: pack horse, helicopter, tractor train, dog team, etc. The Survey's use of multiplex and conventional methods in northern mapping to date is outlined. Its investiga-

tion of Shoran-controlled photography as means of rapidly extending the primary net, is appraised, and plan to test "next fall," another electronic method: Decca, a long-wave system of British design, is discussed.

**26302. SØRENSEN, JON, 1868-** . The saga of Fridtjof Nansen, by Jon

Sørensen; translated from the Norwegian by J. B. C. Watkins. New York, The American Scandinavian Foundation, W. W. Norton & Co., Inc. [c1932]. 6 p. l. [3]-372 p. front.; illus., plates. Also published in German translation: *Fridtjof Nansens saga*, Hamburg, 1939. (316 p., plates, maps). Copy in DLC.

Planned as a publication to celebrate Nansen's 70th birthday, then on his untimely death (1930) extended in scope, this work written by a friend, with Nansen's approval and his family and colleagues' cooperation, is to that extent the explorer-scientist-humanitarian's official biography. In subjective style, with quotations from diaries, correspondence, etc., it describes Nansen's family background and upbringing, his skiing, trip on the whaler *Viking* 1882, his (the first) crossing of the Greenland icecap 1888, the *Fram* drifting expedition 1893-96, etc. Sørensen sketches briefly Nansen's scientific interests; outlines his role in Norwegian politics and diplomacy; his post-war repatriation and rehabilitation work 1920-30. Final chapters deal with Nansen's honors and awards, his humanitarianism, family life, artistic talent, published works. Detailed index is included. Illustrations are based on photographs, also drawings by Nansen and Werenskiöld.

*Contains* an introduction giving an historical outline of Russian marine exploits and a biographic sketch of Mikhail Petrovich Lazarev (1788-1851) with appreciation of his work (p. 3-21). Then follows an account of his first voyage (1813-1816) in the *Suvorov* from Kronstadt to Rio-de-Janeiro, thence around Africa to Port Jackson (Sydney, Australia), then to Alaska and, following the west coast of the Americas, around Cape Horn and back home. The second voyage (1819-21) was to, and around the Antarctic, Australia and the Pacific. The third voyage (1822-1825) on the *Kreiser* and *Ladoga* was along a route similar to the first. Brief accounts are given (p. 58-63, 187-200) of Lazarev's activities in Alaska (around Novo-Arkhangel'sk or Sitka) during the first and third trip, life and conditions there, etc. Bibliographical footnotes.

**26335. SOLECKI, RALPH S., 1917- and R. J. HACKMAN.** Additional data on the Denbigh Flint Complex in northern Alaska. (Washington Academy of Sciences. Journal, Mar. 1951. v. 41, p. 85-88, illus., map)

Preliminary report on two discoveries in northern Alaska during the summer of 1950, of artifacts similar to those reported in J. L. Giddings' *Early flint horizons on the north Bering Sea coast*, 1949. The site of the new finds is by Lake Natkuk near Anaktuvuk Pass "one of the best migration pass routes through the Brooks Range Province to the northern slope of Alaska." Author describes the sites, the artifacts (with illustration) and remarks on significance of these finds "in the chain of evidence of an ancient trail leading from the Bering Straits area into the heart of the continent."

**Copy seen:** DSI-M.

**26336. SOLECKI, RALPH S., 1917-.** Archeology and ecology of the arctic slope of Alaska. (In: Smithsonian Institution. Annual report for 1950, pub. 1951, p. 469-95, illus., 6 plates, 2 maps)

A study linking ecological conditions culminating in the abundance of herbivorous mammals, with the migration of man from Asia and his first settlement here in glacial and post-glacial times. At least four cultures are represented in

the archeological finds of this area. These are (in chronological order): (1) the Folsom or Paleo-Indian culture; (2) the polyhedral flintcore and lamellar-flake people; (3) a prehistoric inland culture (probably Eskimo) blending into that of (4), the historic inland Nunatagmiut Eskimos. Bibliography (32 items).

**Copy seen:** DLC.

**26337. SOLECKI, RALPH S., 1917-.** How man came to North America. (Scientific American, Jan. 1951. v. 184, no. 1, p. 11-15, illus., incl. map)

Author outlines theory that man (following earlier migrations of game animals) entered the New World from Asia via a narrow intercontinental glacier-free land bridge in the latter part of the Pleistocene and early part of the Recent geological periods, roughly 20,000 to 10,000 years ago, "in a series of pulsations continuing over a long time." He summarizes finds of artifacts in North Alaskan localities since 1947 by Giddings and others (including Solecki), some (like those of Paleo-Indians of New Mexico) the work of Folsom Man, others Mongolian-type. He concludes that "the initial migration route into the interior of the continent was probably over the north unglaciated part of Alaska and then down the Mackenzie Basin."

**Copy seen:** DLC.

**26338. SOLECKI, RALPH S., 1917-.** New data on the inland Eskimo of northern Alaska. (Washington Academy of Sciences. Journal, May 1950. v. 40, p. 137-57, illus., 3 sketch maps)

"Appraisal of the archeological resources and possibilities for further research in the interior around the headwaters of the Colville River basin." On the basis of data submitted by members of U. S. Geological Survey parties, 1949 (one of which the author accompanied) and on available published literature, author gives descriptions of the country, the Nunatagmiut Eskimos formerly inhabiting the region, their livelihood, shelter and trade; notes on recent investigations and origins and archeology of the inland Eskimos. Bibliography (31 items).

**Appendix:** Description of the sites and artifacts.

**Copy seen:** DGS; DLC.

**26339. SOLECKI, RALPH S., 1917-.** Notes on two archaeological discoveries in Northern Alaska, 1950. (American

antiquity, July 1951. v. 17, p. 55-57, illus.)

Pre-Eskimo artifacts discovered on the Kuguruk River, north edge of the Brooks Range (DeLong Mts.) are pictured, described and discussed as further evidence "to indicate that the pass routes through the Brooks Range in northern Alaska were traversed by some of the earliest culture bearers. . . . The fact that these early manifestations were found in glaciated areas conclusively points out that these sites were occupied within post-glacial times." Bibliography (4 items).

**Copy seen:** DLC.

**26340. SOLECKI, RALPH S. 1917-** . A preliminary report of an archaeological reconnaissance of the Kukpowruk and Kokolik Rivers in northwest Alaska. (American antiquity, July 1950. v. 16, p. 66-69, illus.)

The author, attached to a U. S. Geological Survey party in 1949, explored part of the north slope of Alaska. On the basis of his and the Survey party's finds he postulates three phases of cultural history in the region: the University of Alaska Campus phase, the Colville Basin phase, and the Western interior Eskimo phase; remarks on the migration route from Asia, and the linking of inland prehistoric Eskimos to the inland Nunatagmiut Eskimos of historic time. Bibliography (7 items).

**26343. SOLNTSEV, N. A.** Snezhniki kak geomorfologicheskii faktor. Moskva, Gosudarstvennoe izd-vo geograficheskoi literatury, 1949. 92 p., incl. illus. **Title tr.:** Snow patches as geomorphological factor.

"Observations indicate that snow patches form in areas of relatively little snowfall when extensive melting does not occur during winter months. Snow drifting and accumulation in ravines, crevices, and hollows induce the development of snow patches or fields which persist throughout the spring, and frequently throughout the summer. The erosion taking place underneath the snow fields during warm weather months facilitates solifluction. Nivation occurs on slopes lacking vegetation. Flat areas such as Central European U.S.S.R. are not subject to nivation. The nivation processes are retarded in Arctic areas by relatively low temperatures. Intensive nivation processes take place in the vicinity of Ufa, on the Central Siberian plateau, in Yakutia and Zabaysk due to late springs, well developed configuration, and relatively high elevation."-SIPRE. Bibliography (64 items).

**26374. SPATH, LEONARD FRANK, 1882-** Additional observations on the invertebrates (chiefly ammonites) of the Jurassic and Cretaceous of East Greenland, II. Some Infra-Valanginian ammonites from Lindemans Fjord, Wollaston Forland; with a note on the base of the Cretaceous. København, C. A. Reitzel, 1952. 40 p., illus. (Meddelelser om Grønland. Bd. 133, no. 4) Results of the Geological expedition til Ostgrønland, 1936-1938, under the leadership of Laue Koch.

**Contains** descriptions of a new ammonite subfamily, Tollinae, a new genus, *Praetollia* and two new species, *P. maynci* and *P. aberrans* from Infra-Valanginian beds of the Lindemans

Fjord region (74°40' N. 20°30' W.) of East Greenland. Author discusses the difficulties in correlation, from boreal to southern and from continent to continent in view of the lack of information concerning faunal succession in the Arctic and stratigraphic knowledge of the Jurassic - Cretaceous boundary. Bibliography (59 items). **Copy seen:** DGS.

**26375. SPEALMAN, C. R.** Effect of ambient air temperature and of hand temperature on blood flow in the hands. (American journal of physiology, Dec. 1945. v. 145, p. 218-222)

*Contains a study on blood flow in hands of young men sitting in warm, comfortable, and cold environments with their hands immersed in water of 2° to 35° C. At any given hand temperature blood flow was greater the warmer the body. Bibliography (10 items).*

**Copy seen:** DLC.

**26376. SPEALMAN, C. R.** Effect of local temperature upon blood flow in extremities. (Federation proceedings, Mar. 1945. v. 4, p. 67)

*Contains a brief abstract on observations on the volume of blood-flow through the hand. Blood flow was least when hands were moderately cold (15°-20° C.); when hands were very cold, blood flow approximated that in warm hands; this holds when subject was in a comfortable environmental condition. When the subject was cold, the blood flow in the hand showed a similar trend though it was considerably less at any given temperature.*

**Copy seen:** DLC.

**26377. SPEALMAN, C. R., and others.** Influence of environmental temperature and posture on volume and composition of blood. (American journal of physiology, Oct. 1947. v. 150, p. 628-39) *Other authors:* M. Newton, and R. L. Post.

*Contains a study on man exposed for about a week to either heat or cold, and also on the effect of prolonged standing or lying down. The concentration of plasma protein and hemoglobin increased on cold exposure, and decreased on exposure to heat. The amount of plasma protein decreased during the first few days of cold exposure and increased in the heat experiments. The environmental extremes did not affect the amount of the circulating hemoglobin. Plasma protein increased in amount during standing and decreased in the recumbent*

position; no change in the amount of hemoglobin was observed. Bibliography (13 items).

**Copy seen:** DLC.

**26378. SPEALMAN, C. R.** Laboratory and field studies: water. (*In:* Newburgh, L. H., ed. Physiology of heat regulation and the science of clothing, 1949. p. 370-74, diagr., table)

*Contains an analysis of heat loss during cold immersion and of measures and equipment to prevent it. The value of various types of protective clothing is discussed. Bibliography (10 items).*

**Copy seen:** DLC.

**26379. SPEALMAN, C. R.** Laboratory and field studies: wet cold. (*In:* Newburgh, L. H., ed. Physiology of heat regulation and the science of clothing, 1949. p. 367-70, tables)

*Contains account of wet cold particularly as affecting human feet: "immersion foot" and "trench foot," causative factors, pathology, prevention, footgear requirements, etc.*

**Copy seen:** DLC.

**26380. SPEALMAN, C. R., and others.** Observations on energy metabolism and water balance of men subjected to warm and cold environments. (American journal of physiology, Feb. 1948. v. 152, p. 233-41) *Other authors:* W. Yamamoto, E. B. Bixby, and M. Newton.

*Contains a report on experiments which demonstrated that energy metabolism was not greatly affected by environmental extremes; basal metabolism (in one experiment) was slightly higher during exposure to cold for a few days, than prior to exposure; diets consumed in the heat contained somewhat more fat and less carbohydrate or protein than those consumed in the cold; there was evidence for storage of water on changing from a warm to a cold environment and loss of water under the reversed circumstances. Bibliography (18 items).*

**Copy seen:** DLC

**26381. SPEALMAN, C. R.** Physiologic adjustments to cold. (*In:* Newburgh, L. H., ed. Physiology of heat regulation and the science of clothing, 1949. p. 232-39)

*Contains information of a quantitative nature necessary for the development of a science of clothing. Includes sections on physiologic mechanisms of cold adjustment, acute and chronic exposure to cold. Bibliography (57 items).*

**Copy seen:** DLC.

**26382. SPECK, FRANK GOULD-SMITH, 1881-1950.** Analysis of Eskimo and Indian skin-dressing methods in Labrador. (Ethnos, Stockholm, 1937. Bd. 2, no. 6, p. 345-53, 11 illus.)

Technique of preparation of different kinds of skins, native terms.

*Copy seen:* DSI-M; INU.

**26386. SPIRIDONOV, N. I. Ūkagiry.** (In: Bol'shaia sovetskaiā ēnsiklopediā. 1926-47. v. 65, col. 167-69, map) Title tr.: The Yukaghirs.

Account of this fragment (about 1000) of an ancient and formerly numerous group living on the tundra of the Kolyma region in Yakutia; their history and relationship with the Tungus, their migratory way of life; settlements; domestic animals and reindeer; fishing and hunting; social organizations and family life; language and religion, ancestor cult and shamanism; their liberation by the Russian revolution and subsequent autonomy with cultural and economic freedom.

*Copy seen:* DLC.

**26387. SPIRIN, IVAN TIMOFEEVICH.** Pokorenie severnogo polūsa. Moskva. Gos. izd-vo geograficheskoi literatury. 1950. 314 p., illus., tables. Title tr.: The conquest of the North Pole.

Contains an account of the air expedition to the North Pole in the spring of 1937, for the establishment of the Soviet Drifting Ice-Floe station "North Pole". Introductory chapters (p. 3-65) recount previous arctic explorations, dealing with earliest Russian settlement of the Arctic, attempts at a northeast passage, attempts to reach the North Pole and R. E. Peary's success, attempts to reach the Pole by air, Russian colonization of the Arctic, etc. Then follow chapters on preparations for the present expedition headed by Otto Ū. Shmidt, its plans and members; detailed itinerary (Moscow - Nar'yan Mar - Matochkin Shar - Ostrov Rudol'fa - North Pole and back); the establishment of the four-man scientific party on a large floe near the Pole which subsequently drifted southward off the East Greenland coast. Rudol'f Island is described (p. 155-96), the polar area (p. 254-82). The significance of the work of the drifting ice-floe station is discussed. The author was chief pilot of the air expedition.

**26388. SPIZHARSKII, T. N., and others.** Geologiā ūzkhnoi chasti Sartano-Adychanskogo mezhdurech'ia. Leningrad. 1940. 137 [2] p. incl. tables, illus., 2

plates, fold. map. (Vsesoŭŭznyĭ arkti-cheskil institut. Trudy, t. 146) **Title tr.:** Geology of the southern part of the Sartang - Adycha River region.

**Contents:** Spizharskil, T. N., and I. Z. Khelfets. Geologiya, geomorfologiya i metallogeniya Sartano - Adychanskogo mezhdurech'ya. (Geology, geomorphology and metallogeny of the Sartang - Adycha River region), p. 5-126, including bibliography (56 items).

Kiparisova, L. D. Novaya fauna verkh-nego triasa Verkhoyan'ya. (New fauna of the Upper Triassic of Verkhoyan'ye), p. 127-38.

Result of the Adycha - Yana Geological Expedition of the Arctic Institute 1937-38 under the senior author's leadership, in the region 64°40'-66° N. 132°30'-138° E. Chapters on geomorphology (relief, river systems, lakes); stratigraphy; vulcanism; petrographic work; tectonics; metallogeny; and fossils.

"Upper Paleozoic, Triassic, Jurassic, and Quaternary deposits occur in the headwater region of the Sartang and Adycha Rivers [left tributaries to the Yana, in Yakutia] . . . Igneous intrusions, mainly granodiorites, traverse the Permian to Jurassic beds. Several of the igneous rocks are described. Upper Triassic cephalopods, pelecypods, and brachiopods (including new species) are also described."—Geological Society of America. **Bibliography and index of geology, 1941-42.** Fold. map scale 1:500,000 with contours, shows hydrological network and geology with profile inset. **Copy seen:** DLC.

**26389. SPUHLER, JAMES N.** Some genetic variations in American Indians. (In: Viking Fund Summer Seminar in Physical Anthropology. 4th Sept. 1949. Papers on . . . the American Indian, 1951, p. 177-202)

Author applies three criteria in selecting characters for the present analysis: (1) genetic determinants of variation in character must be "known"; (2) character must be "common" in most Indian populations; (3) distributional data for the character must be available for one or more Indian populations; (the terms "common" and "known", as used here are explained. On the basis of these three criteria, the following factors were chosen for study: secretor factor; PTC taste

reaction; phlebograms of the anterior thorax; color perception; occipital (lambdoidal) hair whorl; palmaris longus muscle; peroneus tertius muscle; number of vallate papillae. Data on these factors for Indians are compared with those of Eskimos and other groups. Whilst the data obtained were too scanty for an analysis of relationships of American native peoples, they do indicate that the Indians are more closely related to the Mongoloid races than to the Negroids or Caucasoids. Bibliography (nearly 100 items). **Copy seen:** DAL.

**26390. SSYTSCH-AWERINZEW, NATHALIE.** Über *Pleuronectes glacialis* aus dem Weissen Meere. (Zoologischer Anzeiger, 1929. Bd. 91, no. 5-8, p. 156-67, diag.) **Title tr.:** On *Pleuronectes glacialis* from the White Sea.

Contains a comparative morphological and ecological study of this flatfish, carried out in Dvina Bay of the White Sea, with 15 tables of morphological data on *P. glacialis* and two related species, *P. flexus* (White Sea) and *P. platessa* (Barents Sea).

**26412. STEFANSSON, VILHJALMUR, 1879-** . The diets of explorers. (Military surgeon, July 1944. v. 95, no. 1, p. 1-3)

*Contains* a general account of diets of

arctic travelers, including the author himself. The idea is advanced that a pure meat diet, raw or cooked, and irrespective whether visceral in origin, like liver, kidney, or muscle meat, is the best for survival and for antiscorbutic value. Mixed diets or exclusively white-man's diets are insufficient for survival in the Arctic. Doubts are expressed as to the value of lime juice, as used in the past, and other customary items believed to have antiscorbutic value.

**26417. STEIN, IRWIN D.** Physical medicine and cold injury of the limbs. (Archives of physical medicine, June 1947. v. 28, p. 348-51)

Contains a general account dealing with types of cold injury; pathologic physiology and treatment. The author recommends as "ideal treatment", maintenance of the affected limb in a cool room 65°-75° F. during the acute phase, followed by exercise, and surgery in serious cases. Coping with excessive sweating is also discussed.

**26419. STEINERT, WALTHER.** Die Wirkung des Landschaftszwanges auf die materielle Kultur der Eskimo. Diss.

Hamburg, 1935. 4 p. l., 62 p., illus., map. **Title tr.:** The effect of environment on the material culture of the Eskimo.

Ph.D. thesis which attempts to show how greatly the mode of life and forms of production depend upon the natural environment, arctic conditions forcing natives of the region to evolve cultural attributes so effective for survival that their adoption by the white man has lessened the hazard of his travel in the North. Five subjects were investigated: dwellings, clothing, tools and implements, getting of food, and preparation of food. Nine groups of Eskimos were taken into consideration on those five points: the Central, Caribou, East and West Greenland, Polar, Labrador, northwestern Alaskan, Mackenzie, western Alaskan Eskimos and the Kodiak Islanders. All are of the same Eskimo type, although their ergology shows much variation, due to different environment, as is apparent from the different types of dwellings (drawings on p. 59). Seemingly irrational behavior is discussed, e. g. the Caribou Eskimos' not hunting seal nor using the train-oil lamp) and explained as due to religious beliefs based on attachment to the (inland) landscape. Boas' theories are frequently criticized and rejected by the author.

**26420. STEINITZ, WOLFGANG, 1905-** . Ostjakische Chrestomathie; mit grammatikalischem Abriss und Wörterverzeichnis. Stockholm, Ungarisches Institut an der Universität Stockholm und Finnisch-Ugrisches Seminar an der Universität Uppsala, 1942. 102 p. mimeographed. **Title tr.:** Ostyak language chrestomathy (or reader), with a grammatical sketch and a vocabulary.

**Contains** introduction in German, giving general information on the Ostyaks, their dialects, history of linguistic research in the Ostyak language and a bibliography. Then follows a grammatical sketch of the Sherkaly dialect (used on the middle Ob') and texts of eight legends, three tales, 27 riddles, one prayer, and two bear festival songs. A tale in the Synja dialect is added also, two texts exemplifying an attempt to base the Ostyak literary language on the Obdorsk dialect.

**26421. STEINITZ, WOLFGANG, 1905-** . Ostjakische Volksdichtung und

Erzählungen. 2. Teil [sec. 1]. Stockholm, 1941. 208 p. **Title tr.:** Ostyak folk poetry and narratives. pt. 2 [sec. 1]

**Contains** comments and explanations of the texts which were published in the first part of this work (*Grammatische Einleitungen und Texte mit Übersetzungen*, Tartu, 1939, xi, 460 p.): essay on the Ostyakian and Vogulian folk poetry (the meter, parallelism, etymological figures, poetical formulas, use of possessive suffixes -en, etc.), a note on A. Regulys' transcription of Ostyak texts, and commentary on the texts in Synja and Sherkal dialects published in the first volume (linguistic and folkloristic explanations, description of customs connected with these narratives and songs, etc.) Steinitz frequently quotes from, and gives critical remarks on works of his predecessors: A. Reguly, J. Pápay, S. Patkanov, K. F. Karjalainen, B. Munkácsi, and others. Author's foreword (dated July 1, 1941 from Stockholm, Universität ungarisches Institut) states that this, the first section of pt. 2, is to be followed by a second section giving commentary on the Chermislian texts in pt. 1.

**26431. STEPANOV, D. L.** Brakhiopody mshankovykh izvestniakov Kolvinskogo raiona (Severnii Ural). Chast' I. Strophomenacea. 63 p., 4 plates. (Leningrad. Neftanof geologo-razvedochnyi institut. Trudy, ser. A, 1934. vyp. 37) **Title tr.:**

Brachiopoda of the bryozoan limestones of the Kol'va River region (Northern Urals). Part I. Strophomenacea.

*Contains* a study of fossil brachiopods of the area around the middle course of the Kol'va (tributary to the Kama River, ca. 61° N. 57° E.) from the collection made by G. A. Dutkevitch in 1930. In this, the first part, only the group of Strophomenacea is described in detail, including some 35 forms, four of them new species. An introductory section gives a description of the area and the conditions of the formation, an outline of earlier work on the group, etc.

*Copy seen:* DLC.

**26432. STEPANOV, D. L.** Brachiopody mshankovykh izvestniakov Kolvinskogo raióna (Sev. Ural). Chast' 2. Leningrad, Izd-vo Gos. Leningr. univ-ta, 1937. 101 p., illus., plates 1-12. *Title tr.:* Brachiopoda of the bryozoan limestones of the Kol'va River region (Northern Urals). Pt. 2.

*Contains* descriptions of some 50 species of fossil brachiopods from the Kol'va River region of the Northern Urals, with synonyms, diagnoses of five new species and four new varieties, dimensions, critical notes and data on local distribution. In this part, a synopsis is given of all species investigated (in pt. 1-2), a general survey of the fauna, a discussion of the geological age of the limestones (latest period of the Upper Carboniferous), and a bibliography (102 items). Summary in English.

**26433. STEPANOV, N. N.** K istorii osvoboditel'noi bor'by narodnostei severovostoka Sibiri v XVII v. (*In:* Akademiia nauk SSSR. Institut étnografii. Pamiaty V. G. Bogoraza, 1865-1936. 1937, p. 213-26, illus.) *Title tr.:* A contribution to the history of the struggle for liberation of the peoples of northeastern Siberia in the 17th century.

Though Siberia was officially conquered in 1581, its peoples struggled against their Russian conquerors during the entire 17th and 18th centuries. This author controverts view expressed by N. Kozmin in 1931, that Siberia was actually conquered not by weapons, but by the merchandise of Moscow. Stepanov shows that the natives of Siberia did not need Russian merchandise: they had their own natural economy, and got what else they needed from Mongolia, Bukhara and China. The merchandise of Moscow had

to conquer its markets with weapons and the conquest was possible only because of Russians' monopolistic use of fire-arms.

**26436. STEVENSON, ALEX.** The 1950 eastern Arctic patrol. (Arctic circular, Dec. 1950. v. 3, p. 70-72)

Account of the maiden voyage of the Canadian Dept. of Transport vessel *C. D. Howe* to provision northern stations and carry out activities for six departments: Resources and Development, National Health and Welfare, Transport, Mines and Technical Surveys, Justice, and Post Office.

*Copy seen:* CaMAI; DLC.

**26437. STEVENSON, ALEX.** The 1951 Eastern Arctic Patrol. (Arctic circular, Feb. 1952. v. 5, no. 2, p. 19-21)

*Contains* report of the 29th annual Eastern Arctic Patrol, carried out by the Canadian Dept. of Transport vessel *C. D. Howe*, based mainly on the captain's log.

Outlines of the itinerary (Cape Harrison on Labrador, Chimo, Churchill on Hudson Bay, the Baffin Island posts, Dundas Harbour on Devon Island, where a R.C.M.P. post was closed and Craig Harbour on Ellesmere where the post was reopened). The activities by personnel from several government agencies included medical and dental work at each settlement and an eye survey; hydro-

graphic work; ice reconnaissance and air photography of settlements by helicopter; delivery of mail and supplies to the posts; promotion of the Canadian Handicrafts Guild's Eskimo art and craft program (collecting and instruction, etc.); administrative work at the posts and stations; rescue of the disabled Catholic mission ship *Regina Polaris*.

**26438. STEWART, BENJAMIN DUANE, Jr., 1911-** . Alaska's Operation Snowball keeps Thompson Pass on Richardson Highway open throughout the winter. (Pacific builder and engineer, Apr. 1950. v. 56, no. 4, p. 77-79, incl. illus.)

"A description is presented of the machinery, methods and organization adopted in keeping an Alaskan highway open during the winter of 1949/50. The formation of ice on the highway from seepage created a special problem. Such seepages were controlled by erecting along the road shoulders, a fence of canvas strung on poles frozen into the ice. The water freezes on reaching the fence and gradually forms an embankment. Excessive ice formation as occurs near culverts is treated by thawing the culverts with small-diameter steam pipes. The steam is generated in portable heaters mounted on lorries. Narrow drainage trenches across the road are recommended when temperatures are extremely low. The difficulties of operating motor vehicles at very low temperatures are enumerated."—SIPRE. **Copy seen:** DLC.

**26440. STICHEL, HANS.** Ein Beitrag zur nordischen Schmetterlingsfauna und anknüpfende Bemerkungen. (Berliner entomologische Zeitschrift, 1908. Bd. 53, Heft 1, p. 61-124, plate 3) **Title tr.:** A contribution to the fauna of northern butterflies with accompanying notes.

Contains a systematic list of 63 species and many forms of northern butterflies and moths, based chiefly on a collection of H. Rangnow and his son in the Gällivare region of Lule Lappmark in 1907, and on some other sources; includes descriptions, critical notes, keys and data on Scandinavian and total distribution. See also the author's *Zweiter Beitrag*, 1911. **Copy seen:** MH-Z.

**26441. STICHEL, HANS.** Kritische Sichtung der Variationsstufen von *Pieris napi* L. im palaearktischen Gebiet (Lep. Rhop.). (Berliner entomologische Zeitschrift, 1910, pub. 1911. Bd. 55, Heft 3-4, p. 233-51) **Title tr.:** A critical revision of variation forms of *Pieris napi* L. in the palaearctic region (Lep. Rhop.)

Contains a critical revision of variation forms of a very polymorphous species of cabbage butterflies *Pieris napi*, described in some earlier papers of the author (see his *Beitrag z. nord. Schmetterlingsfauna*, 1908), and in the works of other entomologists, including f. *bryoniae* native to northern Scandinavia and U.S.S.R., and f. *frigida* (*kamtschadalis*) from the Kamchatka Peninsula. **Copy seen:** MH-Z.

**26442. STICHEL, HANS.** Zweiter Beitrag zur nordischen Schmetterlingsfauna und anknüpfende Bemerkungen. (Berliner entomologische Zeitschrift, 1911. Bd. 56, p. 33-104, 273, plate 3) **Title tr.:** Second contribution to the northern butterfly fauna with supplementary notes.

Contains a critical revision of 102 species and varieties of butterflies collected by H. Rangnow in 1908, during his second trip to the Gällivare region in Lule Lappmark (many of which were described by the author in his *Ein Beitrag zur nordischen Schmetterlingsfauna*, 1908, q. v.), with additional data and descriptions of newly found species and forms. *Arctica festiva lemniscata* subsp. nov. is new to science. Many species native to northern parts of Fennoscandia and European Russia and

Siberia are included. Bibliography (131 items). A few corrections to this work are added (*Berichtigungen zur zweiten Beitrag*) on p. 273.

**26454. STONE, KIRK HASKIN, 1914-** . Some geographic bases for planning new Alaskan settlement. (In: Alaskan Science Conference . . . 1950. Selected papers, 1952. p. 136-50, 6 maps)

Contains a study of geographic and cultural facts and factors on which planning for permanent settlement could be based. An historical survey and analysis is made of Russian (1740-1830) and Russian-English (1830-1867) settlement, with conclusions (among others) that the present coastal population pattern was established before the Alaska Purchase, and that new settlement may be conceived as permanent on a basis other than agricultural. Further necessary research is indicated.

**26455. STORÅ, RAGNAR.** [För faunan nya nematocerer]. (Notulae entomologicae, 1935. v. 15, no. 4, p. 111-13) **Title tr.:** [Nematocera new to the fauna of Finland.]

Contains (in this paper without a formal title), a list of 14 nematocerans new to the fauna of Finland, including 2 species found in Kuusamo region, one in Kuusamo and Petsamo, and one in Petsamo.

**Copy seen:** DLC; MH-Z.

**26456. STORÅ, RAGNAR.** [För faunan nya nematocerer.] (Notulae entomologicae, 1936. v. 16, no. 4, p. 124-25) **Title tr.:** [Nematocerans new to the fauna of Finland.]

Contains a list (without a formal title) of ten nematocerans new to the fauna of Finland, including brief descriptive notes on *Chironomus luctuosus* and *C. mendax* n. spp. found by R. Kruger in Kuusamo, and records six other species in Kuusamo and one in "Lapponia."

**Copy seen:** DLC; MH-Z.

**26457. STORÅ, RAGNAR.** Mitteilungen über die Nematoceren Finlands II. (Notulae entomologicae, 1939. v. 19, no. 1-2, p. 16-30, illus.) **Title tr.:** Notes on Nematocera of Finland, II.

Contains a systematic list of 54 species of midges occurring in Finland, including descriptions of *Cricotopus bilobatus* n. sp., native to Karesuando, Swedish Lapland and Kola Peninsula; *Psectrocladius fenicicus* n. sp.; *Chironomus* (*Cryptochironimus*: *Harnischia*) *viridulus* var. *Krogerusi* n. var., and *Tanytarsus* (s. str.) *heusdensis* var. *kuusamoensis* n. var. Data are given on distribution, biology and ecology of 15 other species from Kuusamo region and Finnish Lapland. This is a continuation of the author's *Mitteilungen*, 1937 (see *Arctic Bibliography* No. 17068).

**Copy seen:** DLC; MH-Z.

**26458. STRAND, ANDREAS, 1895-** . *Agathidium bicolor* J. Sahlb. (Norsk entomologisk tidsskrift, 1937. Bd. 5, hefte 1, p. 38-40)

*Contains* a comparative study of two closely related species of beetles, *Agathidium badium* native to southern Norway, and *A. bicolor* spreading up to 69°40' N. (Målselv).

**Copy seen:** DA; MH-Z.

**26459. STRAND, ANDREAS, 1895-** . *Agathidium pallidum* Gyll. (Col. Liodidae) als gute Art. (Norsk entomologisk tidsskrift, 1938. Bd. 5, hefte 2, p. 82-83, illus.) **Title tr.:** *Agathidium pallidum* Gyll. (Col. Liodidae) good species.

*Contains* a taxonomic discussion of identity of a beetle, *Agathidium pallidum*, described by Gyllenhiel but reduced to a synonym by W. Hellén. The author studied several specimens of this beetle from Målselv, northern Norway, and recognized it as a valid species.

**Copy seen:** MH-Z.

**26460. STRAND, ANDREAS, 1895-** . Bemerkninger vedkommende koleopterfaunaen i Rana. (Norsk entomologisk tidsskrift, 1938. Bd. 5, hefte 2, p. 83-86) **Title tr.:** Remarks concerning coleopterous fauna of Rana.

*Contains* general notes on coleopterous fauna of the Rana region, in northern Nordland, a list of 19 beetles having a tendency to spread northward from Trøndelag and another list of 43 species living in Rana region but missing in Trøndelag.

**Copy seen:** MH-Z.

**26461. STRAND, ANDREAS, 1895-** . Bemerkungen über nordische *Corticaria* und *Corticarina*-Arten, nebst Beschreibung von zwei neuen Arten. (Norsk entomologisk tidsskrift, 1937. Bd. 5, hefte 1, p. 7-33, illus.) **Title tr.:** Notes on northern species of *Corticaria* and *Corticarina* with descriptions of two new species.

*Contains* a critical revision of 21 species of *Corticaria* and seven of *Corticarina*, almost all of them native to northern regions of Norway; *Corticaria munsteri*, *C. spinulosa* and *Corticarina obfusculata* described as new to science; list of localities is given for each species.

**26462. STRAND, ANDREAS, 1895-** . Bidrag til kjendskapet til Norges Carabusfauna. (Norsk entomologisk tidsskrift, 1928, pub. 1929. Bd. 2, hefte 5,

p. 255-59) **Title tr.:** A contribution to the knowledge of *Carabus* fauna on Norway.

*Contains* critical notes on the treatment of Norwegian species of ground beetles in two works of P. Born, *Zoogeographisch-carabologische Studien*, 1908, and *Die Carabenfauna Norwegens*, 1926, q. v.; deals with the distribution of *Carabus problematicus*, in northern Norway.

**Copy seen:** DA; MH-Z.

**26463. STRAND, ANDREAS, 1895-** . Coleopterologische Bemerkungen auf Grund der Typensammlungen in Lund. (Opuscula entomologica, 1937. Bd. 2, häft. 3, p. 110-12) **Title tr.:** Coleopterological notes on the basis of the collection of the types in Lund.

*Contains* critical notes on two coleopters, on the basis of the study of type specimens deposited at Entomological Museum at Lund; one of them is *Quedius fellmani*, described by J. V. Zetterstedt (in his *Insecta lapponica*, 1840, p. 62, q. v.) from Swedish Lapland and found by the author in northern regions of Norway.

**Copy seen:** DA; MH-Z.

**26464. STRAND, ANDREAS, 1895-** . De fennoskandiske former av *Carabus problematicus* Hbst. (Col.). (Norsk entomologisk tidsskrift, 1935. Bd. 4, hefte 1-2, p. 56-74, text map) **Title tr.:** Fennoscandian forms of *Carabus problematicus* Hbst. (Col.).

*Contains* a taxonomic and zoogeographic study of a ground beetle, *Carabus problematicus* and its three varieties, one of which *C. p. strandi* is native to northern Norway, Swedish and Finnish Lapland, and Kola Peninsula; list of localities is given for each variety.

**Copy seen:** DA; MH-Z.

**26465. STRAND, ANDREAS, 1895-** . Drei neue Lathridien (Col.) aus Fennoscandien. (Norsk entomologisk tidsskrift, 1940. Bd. 5, hefte 4, p. 178-80, illus.) **Title tr.:** Three new Lathridiae (Col.) from Fennoscandia.

*Contains* diagnoses of three new beetles of the family Lathridiidae, including *Corticaria obsoleta* n. sp. occurring in Kittilä, Finnish Lapland.

**Copy seen:** MH-Z.

**26466. STRAND, ANDREAS, 1895-** . Inndeling av Norge til bruk ved faunistiske oppgaver. (Norsk entomologisk tidsskrift, 1943. Bd. 6, hefte 4-5, p. 208-224, text map) **Title tr.:** Subdivision of Norway into faunistic regions.

Contains a scheme of subdivision of Norway into 18 biogeographic regions in respect to the fauna, with a numbered list of small local districts in each of main regions and another alphabetic list of districts with symbols (of main regions) and numbers. This scheme was worked out by the author to replace an earlier subdivision, introduced in 1924 by K. Dahl, J. Lid and T. G. Münster, and was approved at the meeting of the Norwegian Entomological Society, May 6, 1942. Summary in French, p. 213.

**Copy seen:** MH-Z.

**26467. STRAND, ANDREAS, 1895- .** Koleopterologiske bidrag I-IV. (Norsk entomologisk tidsskrift, 1932, Bd. 3, hefte 1-2, p. 97-100; (II) 1937, Bd. 5, hefte 1, p. 24-28; (III) 1945, Bd. 7, hefte 3-4, p. 122-33, illus.; (IV) 1946, Bd. 7, hefte 5, p. 175-84)

Contains critical notes on about 125 Norwegian species of beetles and data on their distribution; includes about 20 species native to northern Norway and Swedish and Finnish Lapland.

**Copy seen:** MH-Z.

**26468. STRAND, ANDREAS, 1895- .** and H. K. HANSEN. Målselvns Koleoptera. (Norsk entomologisk tidsskrift, 1932. Bd. 3, hefte 1-2, p. 17-71) **Title tr.:** Coleoptera of Målselv.

Contains a study of coleopterous fauna of Målselv in northern Norway, carried out in the summers of 1928-30; with list of typical forms for various habitats (banks of water basin, marshes, wet vegetation, etc.); and a systematic list of 786 species with dates, localities, brief data on habitat and a table with data on distribution of species in families. For additions and corrections see A. Strand, *Rettelser til "Målselvns Koleoptera"*, 1936.

**Copy seen:** DA; MH-Z.

**26469. STRAND, ANDREAS, 1895- .** Eine neue *Dorcatoma*-Art (Col. Anobiidae) aus Norwegen. (Norsk entomologisk tidsskrift, 1938. Bd. 5, hefte 2, p. 80-82, illus.) **Title tr.:** A new *Dorcatoma* species (Col. Anobiidae) from Norway.

Contains a diagnosis of a new beetle of the family Anobiidae, *Dorcatoma robusta* n. sp. captured by the author in Rundhaug, Målselv (69° N. 19° E.) on June 13, 1937, and a comparison with *D. dresdensis*, native to the same region.

**Copy seen:** MH-Z.

Contains descriptions of five new rove beetles of the genus *Gyrophaena* from various European regions, including *G. pseudonana* n. sp. found in Rundhaug, Målselv, northern Norway, in 1937.

**Copy seen:** MH-Z.

**26471. STRAND, ANDREAS, 1895- .** Die nordischen Arten der Gattung *Hydnobius* Schn. (Col. Liod.). (Norsk entomologisk tidsskrift, 1944, pub. 1943. Bd. 7, hefte 1-2, p. 74-79, illus.) **Title tr.:** Northern species of the genus *Hydnobius* Schm.

Contains a table for the determination of 7 northern species of coleopterous genus *Hydnobius* (2 are new), critical notes on some of them, and list of localities for all species; including *H. hyperboreus* n. sp. (Karasjok and Lakselv) and 3 other species from northern Norway.

**Copy seen:** DA; MH-Z.

**26472. STRAND, ANDREAS, 1895- .** Die nordischen *Gyrophaena* Mannh. (Col. Staph.), mit Beschreibung von zwei neuen Arten. (Norsk entomologisk tidsskrift, 1935. Bd. 3, hefte 5, p. 395-404, illus.) **Title tr.:** Northern *Gyrophaena* Mannh. (Col. Staph.) with descriptions of two new species.

Contains a revision of 16 northern rove beetles of the genus *Gyrophaena*, with a table for the determination of the species, diagnoses of 2 new species and list of Norwegian localities for all species, including 5 species native to northern regions.

**Copy seen:** DA; MH-Z.

**26473. STRAND, ANDREAS, 1895- .** Die norwegischen Arten der Gattung *Acrotichis* Motsch. (Col. Ptiliidae). (Norsk entomologisk tidsskrift, 1941. Bd. 6, hefte 1, p. 25-30, illus.) **Title tr.:** Norwegian species of the genus *Acrotichis* Motsch.

Contains historical notes on the study of coleopterous genus *Acrotichis*, a diagnosis of *A. norvegica* n. sp. and a list of 16 species with Norwegian localities; includes 10 species native to northern Norway.

**Copy seen:** DA; MH-Z.

**26474. STRAND, ANDREAS, 1895- .** *Phytodecta norvegicus* n. sp. (Col. Chry-

somelidae). (Norsk entomologisk tidsskrift, 1936. Bd. 4, hefte 3, p. 104-105, illus.)

*Contains* a diagnosis of a new beetle, *Phytodecta norvegica* n. sp. collected by L. R. Natvig and by the author at Målselv, northern Norway (ca. 69° N.)

**Copy seen:** DA; MH-Z.

**26475. STRAND, ANDREAS, 1895-** . *Quedius pseudolimbatus* n. sp. (Col. Staph.). (Norsk entomologisk tidsskrift, 1938. Bd. 5, hefte 2, p. 79-80, illus.)

*Contains* a diagnosis of a new species of rove beetles, *Quedius pseudolimbatus* n. sp. found by the author on June 28, 1930, in Målselv, northern Norway, and comparison with related species.

**Copy seen:** MH-Z.

**26476. STRAND, ANDREAS, 1895-** . Rettelser og tilføielser til "Målselvens Koleoptera". (Norsk entomologisk tidsskrift, 1936. Bd. 4, hefte 3, p. 106-109)

**Title tr.:** Corrections and additions to "Målselvens Koleoptera."

*Contains* a list of about 50 beetles with additional data or corrections to the work of the author and H. K. Hanssen, *Målselvens Koleoptera*, 1932, q. v. dealing with coleopterous fauna of that region in northern Norway.

**Copy seen:** DA; MH-Z.

**26477. STRAND, ANDREAS, 1895-** . Seven new species of Coleoptera from Norway. (Norsk entomologisk tidsskrift, 1946. Bd. 7, hefte 5, p. 168-72, illus.)

*Contains* diagnoses of seven new species of beetles from various regions of Norway, including *Clambus borealis* and *Oxyptoda (Podoxya) hansseni* n. spp. native to northern Norway.

**Copy seen:** DA; MH-Z.

**26478. STRAND, ANDREAS.** *Stenus (Hemistenus) pseudopubescens* n. sp. (Col. Staph.). (Norsk entomologisk tidsskrift, 1940. Bd. 5, hefte 4, p. 180-82)

*Contains* a description of a new rove beetle *Stenus pseudopubescens*, native to many localities in Norway, including Tromsø and Finnmark, northern Norway, and Råneå, Norrbotten, Sweden; text in German.

**Copy seen:** MH-Z.

**26479. STRAND, ANDREAS, 1895-** . Über *Philonthus nigriventris* Ths. (Col.) eine in Scandinavien bisher z. T. verkannte Art. (Norsk entomologisk tidsskrift, 1936. Bd. 4, hefte 3, p. 102-104) **Title tr.:** On *Philonthus nigriventris* Ths. (Col.) a

species to some extent misunderstood in Scandinavia.

*Contains* a critical study of two closely related and often confused species of beetles, *Philonthus nigriventris* Thomson and *P. setosus*, both native to northern Scandinavia, with lists of localities for each species.

**Copy seen:** DLC; MH-Z.

**26480. STRAND, ANDREAS, 1895-** . Über *Rhynchaenus flagellum* Erics. (Col. Cure.). (Norsk entomologisk tidsskrift, 1941. Bd. 6, hefte 1, p. 31-33, illus.)

**Title tr.:** On *Rhynchaenus flagellum* Erics.

*Contains* a taxonomic and nomenclatorial study of a northern snout beetle, *Rhynchaenus flagellum*, distributed in northern Norway (Tromsø, Finnmark and Sørvaranger) Swedish Lapland and Vestspitsbergen (Colesbukta, Hiorthhamn i. e. Muskushamn, and Adventdalen) and comparison with related species: *R. foliorum*, *R. saliceti* and *R. angustifrons*.

**Copy seen:** DA; MH-Z.

**26481. STRAND, ANDREAS, 1895-** . Über *Stenus crassus* Steph. und *nannus* Steph. (Col. Staph.) und verwandte Formen. (Norsk entomologisk tidsskrift, 1942. Bd. 6, hefte 2-3, p. 70-74) **Title tr.:** On *Stenus crassus* Steph. and *nannus* Steph. (Col. Staph.) and related species.

*Contains* a comparative taxonomic study of two species of rove beetles, *Stenus crassus* and *S. nannus*, both native to northern Norway, and related species, including *S. formicetorum*, occurring in Målselv.

**Copy seen:** DA; MH-Z.

**26482. STRAND, ANDREAS, 1895-** . Zetterstedts funn av norske coleoptera. (Norsk entomologisk tidsskrift, 1945. Bd. 7, hefte 3-4, p. 134-35) **Title tr.:** Zetterstedt's finds of Norwegian Coleoptera.

*Contains* a list of Norwegian beetles described by J. V. Zetterstedt in his *Fauna insectorum Lapponica*, 1828, q. v., and *Insecta Lapponica*, 1840, q. v., with their modern equivalents, including 14 native to northern Norway.

**Copy seen:** DA; MH-Z.

**26483. STRAND, ANDREAS, 1895-** . Zwei neue Käfer aus Nord Norwegen. (Norsk entomologisk tidsskrift, 1943. Bd. 6, hefte 4-5, p. 206-207, illus.) **Title tr.:** Two new beetles from northern Norway.

*Contains* descriptions of two new species of beetles, *Liodes sparre-schneideri*, found

in Finnmark, and *Myllaena hyperborea* n. sp. native to Tromsø and Finnmark provinces. **Copy seen:** MH-Z.

**26484. STRAND, EMBRIK, 1876-** . *Chloroclystis chloerata* Mab. v. *hadenata* Fuchs, en for Skandinavien ny Geometer. (Entomologisk tidskrift, 1902. Årg. 23, häft. 1, p. 48) **Title tr.:** *Chloroclystis chloerata* Mab. v. *hadenata* Fuchs, a geometrid new for Scandinavia.

**Contains** critical note on this geometrid, new to lepidopterological fauna Norway, found in Tysfjorden, Nordland.

**Copy seen:** DLC; MH-Z.

**26485. STRAND, EMBRIK, 1876-** . *Depressaria arctica* Strand, n. sp. (Archiv for matematik og naturvidenskab (1901-1902, pub. 1902. Bd. 24, nr. 7, p. 1-4)

**Contains** German description of *Depressaria arctica* n. sp. collected by the author in 1900, near Storaas, Tysfjorden, northern Norway. **Copy seen:** MH-Z.

**26486. STRAND, EMBRIK, 1876-** . Die Dietyriden, Dysderiden, Drassiden, Clubioniden und Agaleniden der Collett'schen Spinnensammlung. Christiania, A. W. Brøgger, 1904. 16 p. (Norske videnskabs-akademi, Oslo. Forhandling, 1904, no. 5) **Title tr.:** Dietyridae, Dysderidae, Drassidae, Clubionidae and Agalenidae of Collett's spider collection.

**Contains** a systematic list of 51 species of spiders (two are described as new) in five families, with localities, including *Gnaphosa montana* and *G. anglica* native to Tromsø and *Tegenaria derhami* from Lofoten Islands. This was published as a supplement to the paper of R. Collett, *Oversigt over Norges Araneider, 1-2, 1876-77, q. v.*

**Contains** a systematic list of 142 hemiptera (in 17 families), including many species native to the Nordland region of northern Norway.

**Copy seen:** DLC; MH-Z.

**26493. STRAND, EMBRIK, 1876-** . Oversigt over de skandinaviske arter av slekten Lycosa (Latr.). (Entomologisk tidskrift, 1898. Årg. 19, häft. 3-4, p. 145-58) **Title tr.:** A review of Scandi-

navian species of the genus *Lycosa* (Latr.).

Contains tables for the determination of 40 Scandinavian species (imagines) of arachnid genus *Lycosa* and of 31 species of their larvae; the distribution is not cited but the list includes at least one arctic species, *L. lapponica*.

**Copy seen:** DLC; MH-Z.

**26494. STRAND, EMBRIK, 1876-** . Orthoptera og Hymenoptera samlede i 1900. (Archiv for matematik og naturvidenskab, 1900-1901, pub. 1901. Bd. 23, no. 6, p. 1-7) **Title tr.:** Orthoptera and Hymenoptera collected in 1900.

Contains a list of ten orthopters, including *Podisma frigida* from Tysfjorden, northern Norway, and another list of 78 Norwegian hymenopters (Hymenoptera phytophaga) determined by F. W. Konow, also 43 species of Hymenoptera aculeata determined by J. D. Alfken, including several species native to Tysfjorden region.

**Copy seen:** MH-Z.

**26495. STRAND, EMBRIK, 1876-** . *Plutella hyperboreella* Strand n. sp. (Entomologisk tidsskrift, 1902. Årg. 23, hæft. 1, p. 63-64)

Contains a German description of a new beetle *Plutella hyperboreella* n. sp. collected by the author in Kaafjord, Alten, Finnmark province, Norway.

**Copy seen:** DLC; MH-Z.

**26496. STRAND, EMBRIK, 1876-** . Theridiiden aus dem nordlichen Norwegen. (Archiv for matematik og naturvidenskab, 1901-1902, pub. 1901. Bd. 24, nr. 2, p. 1-66, illus.) **Title tr.:** Theridiidae from northern Norway.

Contains descriptions of two new genera, two subgenera and 11 new species of spiders of the family Theridiidae, collected by the author in Nordland province, northern Norway and on Lofoten Islands in the summers of 1899-1900 (p. 1-48); and a systematic list of 66 species earlier described from the same regions, with data on habitat and local distribution.

**Copy seen:** MH-Z.

**26497. STRAND, EMBRIK, 1876-** . Trichoptera og Neuroptera-Planipennia. (Entomologisk tidsskrift, 1901. Årg. 22, hæft. 2-3, p. 93-96) **Title tr.:** Trichoptera and Neuroptera-Planipennia.

Contains a list of 52 Norwegian species of Trichoptera, and 22 of Neuroptera-Planipennia, including at least ten species of these flies native to Nordland.

**Copy seen:** DLC; MH-Z.

Contains a description of the sea otter; its fur; hunting of the animal; its behavior in the sea and on land; Steller's first observations on it about 1740. Bibliographic footnotes.

**Copy seen:** DSI-M.

**26499. STRASSL, HANS.** Ein Nomo-gramm für die Dauer von Polartag und Polarnacht bei beliebiger Ekliptikschiefe. (Polarforschung, 1951, Bd. 3, Jahrg. 21, p. 40-43, incl. diag.) **Title tr.:** Nomo-gram for duration of the polar day and night for any given inclination of the ecliptic.

The nomogram is shown, with full discussion and formulae for its construction and use. **Copy seen:** DGS.

**26499A. STRAY, KRISTIAN.** Experimental investigations of the reaction of the skin to cold; a contribution to the prophylaxis of freezings. Oslo, J. Dybwad, 1943. 216 p. (Norske Videnskaps-Akademi, Oslo. Mat.-naturv. klasse, 1943, no. 3)

Contains an extensive study of the anatomical, physiological and prophylactic aspects of cold injury, with the experimental part performed largely on the author himself. Includes an introductory section on the anatomy of the skin, and on its reaction to irritants (said to be the first general review of these questions and their literature). Then follow three chapters on: (1) cutaneous reactions to cold in the face and ears, as studied on recruits, with data on relation of skin temperature to occupation and hair color; relations and differences in temperature of the cheek, zygomatic arch, ears and nose; reactions and reactive changes to cold; local frostbite, etc. (2) Experimental studies on the re-

action of skin to cold air, dealing with heat exchange and balance; temperature and reactive changes of the skin; venous congestion, etc. (3) Prophylactic measures against freezing, with discussion of the characteristics of various protective substances; and account of author's experiments on wet skin, ordinary cleansed skin, and talcum-treated skin, using paraffin, cod-liver oil, vaseline, lanolin and other fatty or fat-like substances as protection against cold. Bibliography (about 300 items). **Copy seen:** DLC.

**26500. STRECKER, ROBERT L., and others.** Notes on mammals from Alaska. (Journal of mammalogy, Nov. 1952. v. 33, p. 476-80, sketch map) *Other authors:* F. A. Ryser, W. J. Tietz, and P. R. Morrison.

Contains records on 200 rodents belonging to some 15 species, trapped during July-Aug. 1950 in Alaska from Barter Island off the north coast to Valdez, Prince William Sound. Data include localities at times of trapping; size and weight; sex; abundance, etc.

**Copy seen:** DGS.

**26501. STRECKER, ROBERT L., and P. R. MORRISON.** Observations on lemmings from Barter Island, Alaska. (Journal of mammalogy, May 1952. v. 33, p. 180-84, plate)

Contains a brief report on field observations made on the island and adjacent North Alaskan coast in Aug. 1950, on the habitat of the animals, and also data on the growth of young, collared lemmings (*Dicrostonyx rubricatus* (*rubricatus*)) in captivity, their food preferences, behavior, fur, etc. Bibliography (6 items).

**Copy seen:** DGS.

**26502. STREICHER, EUGENE, and others.** Effects of extreme cold on the fasting pigeon with a note on the survival of fasting ducks at  $-40^{\circ}$  C. (American journal of physiology, May 1950. v. 161, p. 300-306) *Other authors:* D. B. Hackel and W. Fleischmann.

Laboratory study of "the blood glucose level of animals placed in the cold as an index to their nutritional status. Determinations of liver glycogen were also made to compare the rate of its depletion in the fasting pigeon at  $-40^{\circ}$  C. with birds fasted at room temperature." Author describes methods, reports results (including survival time (48 to 144 hours and effect of wind on survival of pigeons at  $-40^{\circ}$  C.) and notes that "the

insulation afforded by the feathers is essential to the survival." Bibliography (15 items). **Copy seen:** DLC.

**26503. STRELKOV, S. A.** O nekotorykh osobennostyakh gidrograficheskoi seti v nizov'yakh Eniseia. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1949. t. 81, no. 5, p. 549-54, maps) **Title tr.:** On some peculiarities of the hydrographical net of the lower Yenisey.

The author describes some peculiarities of the tributaries of the lower Yenisey ( $69^{\circ}$ - $72^{\circ}$  N.) such as the relative independence of the course of the tributaries from the Yenisey valley and the phenomenon that close to it there are located upper courses of rivers of other basins. These peculiarities are analyzed and explained in detail.

**26504. STREL'NIKOV, I. D.** K poznaniu fauny Karskogo moria. (Predvaritel'nyi otchet o zoologicheskikh rezul'tatakh Karskoi ekspeditsii 1921 g.). (Leningrad. Leningradskii nauchnyi institut imeni P. F. Lesgafta. Izvestiia, 1923. t. 6, p. 71-81, table) **Title tr.:** Studies of the fauna of the Kara Sea. (Short preliminary report of the zoological results of the Kara Expedition 1921).

Author distinguishes four hydrobiological sectors in the area studied. Hydrologically the area has three components: (1) arctic water, present at all depths; (2) the waters of the Ob' and Yenisey, on the surface near the shore; (3) the Atlantic waters of the several branches of the Gulf Stream. The effect of these complicated hydrological conditions on the life of the sea are discussed. Summary in English. **Copy seen:** DLC.

**STREL'TSIN, G.,** see Koncha, V., & others. Khibinogorskaiia obogatitel'naia fabrika. 1933. No. 23378.

**26505. [STRENTSEL', IVAN IVANOVICH, 1811-1881].** Russkiiia ekspeditsii dlia opisaniia svernykh beregov Sibiri i prilizhashchikh ostrovov, 1734-1862 gg. Kronshtadt, 1877. 117 p. ("Iz n<sup>o</sup>n<sup>o</sup> 'Kronshtadtskogo Vrestnika' za 1876.")

**Title tr.:** Russian expeditions for the surveying of the northern coasts of Siberia and adjoining islands, 1734-1862.

Contains historical data on many Russian expeditions in arctic seas to explore the northern coasts of Siberia and European Russia, beginning with the work of the members of the second Bering or Great Northern Expedition—Malygin,

Ovčyn, Minin, Pranchishchev, Lasinius, "Brothers" Laptev and Cheliúskin, who described the coast from the Ob' to Kolyma River (1739-42); expeditions of Capt. Billings and Sarychev from the Kolyma eastward (1737), Lt. Anzhu (from Yana River) and Capt. Vrangél' (from the Kolyma, 1820-24); Ivanov, Ragozin and Berezhnykh explored the estuary of the Pechora River, Kanin Peninsula and Vaygach Island; Capt. F. P. Litke's four expeditions (1821, 1822, 1823, 1824) to Novaya Zemlya and survey of the Murmansk coast; his work in that region continued by Pakhtusov, Tšivolka, Krotov, Krapivin, Kazakov and Eremin. One of these expeditions under direction of the academician Behr and Tšivolka (in 1837) not only surveyed the coast of Novaya Zemlya but studied geology, fauna and flora of that island; another early expedition of Lt. Chichagov in 1764 and 1765, trying to find Northeast Passage, visited and surveyed Svalbard. Many other less important expeditions are briefly described in this work which was first published in *Kronshtadtskii vĕstnik* 1876 (not seen).

**26507. STRESEMANN, ERWIN.** Birds collected in the North Pacific area during Capt. James Cook's last voyage (1778 and 1779). (Ibis, Apr. 1949. v. 91, p. 244-55)

On the basis of data in John Latham's *General synopsis of birds*, 1781, Thomas Pennant's *Arctic zoology*, 1784, and the narrative of Capt. Cook's third expedition (pub. 1784), the author arranges the bird species of this voyage, according to the localities visited; using throughout the "sequence of modern taxonomy." Stresemann's is the first study of this material

since Latham and Pennant published their works, and includes birds from Prince William Sound, Unalaska, St. Matthew Island, Bering Strait, the ice of Chukchi Sea, Norton Sound, and Kamchatka. Bibliography (10 items).

**Copy seen:** DSI-M.

**26508. STRODE, HUDSON, 1893-** Finland forever. New ed. New York, Harcourt, Brace [1952]. 472 p. illus.

**Contains** author's impressions of Finland based largely on a visit there in 1939. Chapters 6-8 (p. 94-151) recount his experience of a two-day bus trip up the Arctic Highway from Rovaniemi to Liinahamari on the coast, a visit to the nickel mines, etc. Then follow chapters on history, modern progress, personages, war with Russia, etc. The present edition is similar to the first (1941) with an added section covering the period since 1940.

(Sovetskaiā geologiā, Dec. 1940. no. 12, p. 75-85, map) **Title tr.:** Magnetic anomalies of the Northern region and the task of geophysics in investigating its depth structure and mineral deposits.

*Contains* a report on geomagnetic observations in northern European Russia over an area of 1 million km<sup>2</sup>, from 10,000 points (1 point: 100 km<sup>2</sup>). Observations were largely made along rivers and main roads and were more frequent south of the 60° N. lat. parallel. Nonetheless, several areas with magnetic anomalies are outlined and the implications of these anomalies with regard to the presence of salt domes, etc., are discussed. An outline for further, more intensive studies is given.

**Copy seen:** DLC.

**26512. STRONG, HAROLD N.** Survive in the Arctic! (Flying safety, Oct. 1952. v. 8, no. 10, p. 2-6, illus.)

*Contains* essential instructions to fliers for survival after emergency landing in arctic regions. Includes information on signals; use of the aircraft as shelter; building a snow shelter; first aid; prevention of snow-blindness; making goggles, etc.; blubber and other stoves; maintaining morale.

**Copy seen:** DP.

Rogers, with additions.

*Contains* Latin translation of species descriptions and German translation of the text of W. F. Rogers, *Synopsis*, 1856, q. v., with critical notes and additions by E. Suffrian. The second part of this paper includes five species native to "Russian America." *Copy seen:* MH.

**26519. SUHONEN, L.** Kemijoensillat rovaniemellä. (Teknillinen aikakauslehti, 1930. v. 20, p. 420-29, illus., map,

diagrs.) *Title tr.:* The Kemi River bridges at Rovaniemi.

*Contains* data on bridge construction in cold weather in an 0° C. yearly isotherm area (Rovaniemi 66°32' N. 25°53' E.). "A description of the simultaneous building of the Ounaskoski Bridge, length 340 m. and the Suutarinkorva Bridge, length 296.10 m. . . . in 1927-30 is presented. The steel railroad bridges have combination piers and ice breakers constructed of granite blocks joined by cement. A 1:3 ratio of cement was used in under-water construction and 1:4 above the water. The building work in the winter time was hampered by the freezing of materials and machinery and by the formation of frazil ice in the Kemi River which raised the water level at the bridge to 60 m. and increased the velocity from 2.0-2.5 m/sec. to 4m/sec. The scaffoldings were protected against sharp ice sheets, 1-3 cm. thick, by putting in pilings with iron reinforcements on the upstream side."—SIPRE.

**26520. SUHONEN, L.** Maantie-ja juna-liikenteen dynaamisesta vaikutuksesta ounaskosken ja suutarinkorvan siltoihin. Maantieliikenne. (Teknillinen aikakauslehti, 1931. v. 21, no. 7-8, p. 413-19, illus., diagrs.) *Title tr.:* Dynamic influences of road and railway traffic on the Ounaskoski and Suutarinkorva bridges.

*Contains* data on the vibrations "caused by horses running in different directions and over different spans" and the "deflections caused by locomotives at varying speeds." The measurements were made from the ice in the spring. These bridges span the Kemi River at Rovaniemi in northern Finland. Summary in English. *Copy seen:* DLC.

**26521. SUHONEN, L.** Ratapölkkyjen keskimääräinen ikä maassamme ja niiden kyllästyksen kannattavuus. (Teknillinen aikakauslehti, 1935. v. 25, no. 12, p. 411-20, tables, diagrs.) *Title tr.:* Average age of sleepers and profitability of impregnation.

On basis of statistics covering 17 years. the author shows that the unimpregnated railroad sleepers (ties) last longer (barring mechanical injury) in northern than in southern Finland. Data on impregnating the ties are presented. English summary, p. 420. *Copy seen:* DLC.

**26522. SUHONEN, L.** Uusimmista kiskon kiinnitystavoista ratapölkkyihin (Ar-

vostelua, Huomiota ja kokeiluja erritain-kin kiilakiinnitystä ja pohjoismaisia olo-  
suhteita silmälläpitäen). (Teknillinen  
aikakauslehti, 1937. v. 27, p. 345-57,  
illus., diagrs.) **Title tr.:** New methods  
of fastening rails to sleepers [etc.]

Contains discussion of means for at-  
taching railroad rails to wooden ties  
(sleepers) to give security under low-  
temperature conditions. The Belgian  
method (system Ougrée) used experi-  
mentally was found efficient except for  
tendency of wedges to crack and work  
loose under winter conditions. The  
author presents here an improvement on  
the Ougrée system, by a simple device  
locking the wedge in place. Summary  
in English. **Copied seen:** DLC.

**26531. SUNDELL, A. F.** Snötäcketts höjd i Finland Januari-Maj 1891. Helsingfors, 1892. 60 p., tables. (Fennia, 7:3) *Title tr.:* Thickness of the layer of snow fallen in Finland from January till May 1891.

On the basis of reports of 165 observers, observations are presented according to localities and districts with notes on the atmospheric conditions, etc. The variations, in depth of snow cover are mapped and analyzed. Total depth of snow is also given for particular water drainage areas and the total depth for the whole country is calculated.

**26539. SURVEYING AND MAPPING.** Map reproduction in arctic areas. (Surveying and mapping, Oct.-Dec. 1951, v. 11, p. 350-52, incl. illus.)

"A complete heating, cooling and ventilating system which will regulate temperature on standard map reproduction van-type bodies mounted on a standard military truck chassis in sub-arctic temperatures is described. The major components of the heating and air cooling system are mounted over the

cab in an aluminum shell, and the ventilating system is located in the van. A gasoline-burning aircraft heater which burns general-purpose gasoline supplied from the truck's gasoline tank is used. A maximum of 200,000 B.t.u./hr. are provided. The heater can be started at temperatures down to  $-70^{\circ}$  F. and operated with 110 v.-a. c. power and will heat the van interior to  $+65^{\circ}$  F. within 1 hr. from the initial cold start."—SIPRE.

**26570. SWEETMAN, WILLIAM J., and others.** Better forage for Alaska. Palmer, Alaska, 1950. 19 p., illus., tables. (Alaska. Agricultural Experiment Stations. Circular no. 12) *Other authors:* H. J. Hodgson and A. H. Mick.

*Contains* a report and recommendations based on recent field studies. Oats and peas are recommended for silage; instructions for planting and harvesting of these plants, as well as brome grass and clovers, are given, also directives in use of manure and fertilizers.

**Copy seen:** DA.

**26571. SWEETMAN, WILLIAM J., and others.** Raising dairy calves and heifers in Alaska. Palmer, Alaska, May 1951. 12 p. illus., tables. (Alaska. Agricultural Experiment Station. Circular no. 17; published in cooperation with U. S. Dept. of Agriculture, Agricultural Research Administration) *Other authors:* Wallace R. Middleton and Fred Swingle.

*Contains* brief instructions how to raise herd replacements in Alaska. Includes directives as to feeding of cows and offspring; shelter; composition and economics of feed; rations for calves, etc.

**Copy seen:** CA:MAI.

**26572. SWENSON, OLAF, 1883-**. Northwest of the world; forty years trading and hunting in northern Siberia. New York, Dodd, Mead Co., 1944. 6 p. l., 270 p., 8 plates.

*Contains* account of the author's experiences operating as a trader out of Seattle, to the Kamchatka and Chukotka from 1900 till about 1930, including his shipwrecks, and trips as far as Cham Bay, Sredne Kolymsk, and overland by Verkhoyansk to Yakutsk. He describes local conditions in places he visited from time to time; his relations with natives, many of them friends of long standing, and with Russian officials; also occasional encounters with, or news of other traders, whalers and expeditions such as the *Karluk* drift, Ben Eielson's last flight, etc. Scattered throughout the book are many realistic observations on native life as Swenson knew it, particularly that of Chukchis (e. g. p. 20-33), also Yakuts (p. 218f, 228f, 231-34, 237, 240-44, 253f) and Lamuts (p. 218f). He notes difference between coast Chukchis, called "Ankalin," and the inland deer-breeders, or "Chowchus." The Karakees, living at

Navarin, seem to him a different sort of people from the Chukchis. Anecdotes are given of an operation, performed by a Chukchi medicine man (p. 81-83), of native thievery and honesty, etc.

**26573. SWIFT, RAYMOND W.** The effect of feed on the critical temperature for the albino rat. (Journal of nutrition, Nov. 1944. v. 28, no. 5, p. 359-64, table, diagr.)

The heat production of six mature, male rats was determined at environmental temperatures of 15° to 34° C. both while the animals received a diet with a high dynamic effect, and while they were fasting. The zone of thermal neutrality for the fasting rats was found to be from 28° to 33° C.; the effect of feed was to lower both limits of this range by 1° C. About one third of the heat increment of the food, as observed in the zone of thermal neutrality, was manifest below the critical temperature. Bibliography (5 items).

**Copy seen:** DSG.

**26574. SWIFT, RAYMOND W., and RICHARD M. FORBES.** The heat production of the fasting rat in relation to the environmental temperature. (Journal of nutrition. Sept. 1939. v. 18, no. 3, p. 307-318, illus.)

Contains a report on the heat production of albino rats in the post-abortive state, kept at environmental temperatures of 7.5°-35.0° C. The critical temperature for fasting rats was found to be 30° C. The metabolism was constant over a range of 30° C. to 33° C. The percentage of total heat, eliminated as latent heat of water vapor, increased steadily from 7.9 per cent to 59.2 per cent, with rise of environmental temperature from 7.5° C. to 35° C., though the absolute amount of heat eliminated in this manner was practically constant up to 31° C., above which a definite increase took place. Bibliography (12 items).

**26590. TALLGREN, A. M.** Biarmia. (Eurasia Septentrionalis antiqua, 1931. v. 6, p. 100-120, 8 illus., map)

Contains analysis of the saga of Ottar's voyage to the "Biarmenland" about 870 A. D. described in the "Saga of Olaf the Saint" by Alfred the Great in 1026. The Norwegians sailed eastwards of Nordkap, reached the land of Biarmia, bartered their goods for furs, and plundered the Jomali's sanctuary of the Biarmians who seemed to them to speak the same language as the Lapps. Tallgren tries to localize Biarmialand and investigates archeological objects from Permian territory, which, however, do not show any Scandinavian influence. Conclusion is made that Biarmia must lie somewhere in Karelia, and that the description of the sanctuary was made following the facts found among the Lapps.

**26606. TANNEHILL, IVAN RAY, 1890-** . Weather around the world. [2d ed.] Princeton, Princeton University Press, 1952. 212 p. illus.

Contains a popular account of the weather of the earth. Following sections on the various meteorological phenomena, the climate of the earth's main regions is

described, including the arctic areas in Asia (p. 117) and America (p. 136-39).

**Copy seen:** DLC.

**26607. TANNER, VÄINÖ, 1881-1948.** Ett arktiskt kulturproblem; några synpunkter. (Terra, 1932. 44:3, p. 167-74) **Title tr.:** A problem of arctic culture; some points of view.

Discussion of finds of harpoon points in 7th-12th century deposits on Kjelmo, an islet in the mouth of the river Potsjoki, apparently once inhabited by ancestors of Skolt Lapps; with remarks also on various other archeological finds of stone age artifacts in northern parts of Fennoscandia. Author relates these finds to the "Eskimo-type" culture observed by Nordenskiöld on the Vega expedition, and by others on Yamal Peninsula and other parts of the arctic coast. Tanner postulates some prehistoric connection between "Eskimo-type" culture and that of the progenitors of the Skolt Lapps.

**Copy seen:** DLC.

**26608. TANNER, VÄINÖ, 1881-1948.** The Köllaž' Jokk' Gaece esker once more. Helsinki, 1934. 8 p., illus. (Fennia, 60:2)

On the basis of four excavations into the Köllaž' Jokk' Gaece esker (69°25' N. 30°39' E.), the author states his belief that the folding and slipping were caused by the melting of "the ice remains under and at the sides of the former sub-aerial, glacio-fluvial river's deposits". The creation and formation of the esker's covering was shown clearly by the excavations to belong to the passive phase, contrary to De Geer's findings on the Stockholm eskers. The excavations and material found are described.

**Copy seen:** DLC.

**26609. TANNER, VÄINÖ, 1881-1948.** Patajärvi i Petsamo, en sjö med högeligen växlande vattenstånd. (Terra, 1932. 44:1, p. 76-84, illus., diags.) **Title tr.:** Patajärvi in Petsamo, a lake with highly fluctuating water level.

A description of this closed lake (69°39'15" N. 31° E.) and its surroundings is given. Dried up during the winter and the beginning of spring, it is quickly filled in May (?) and June by rain and spring water, and in September it begins to dry up again. The oscillation of the water level measured is 12.11 m., and may reach some 15 m. The water apparently leaves the lake by percolating through the gravel bottom.

**Copy seen:** DLC.

**26610. TANNER, VÄINÖ, 1881-1948.** Petsamon nikkelimalmit. (Teknillinen aikakauslehti, 1925, v. 15, no. 11, p. 533-37) *Title tr.:* Petsamo's nickel ores.

*Contains* a description of the work of the Finnish Geological Commission's four-man party in the Petsamo area in 1924, prospecting for new nickel pyrite ores. Electrical tests were used in places where the underlying rock was covered. Geological and chemical analysis are given of the ore bodies located.

**26611. TANNER, VÄINÖ, 1881-1948.** The problem of the eskers; the esker-like gravel ridge of Čahpatoaiv, Lapland. Helsinki, 1932. 13 p. plates, map. (Finland. Geologiska kommissionen, Bulletin no. 99)

■ *Contains* an account of a geological and geomorphological study of the Čahpatoaiv ridge, northwestern Petsamotunturit (69°20' N. 30°20' E.). The results suggest that the gravel ridge represents an esker-like embryo formed by glacio-fluvial accumulation and subsequently re-formed by glacio-fluvial waters.

*Copy seen:* DLC.

**26612. TANNER, VÄINÖ, 1881-1948.** The problems of an esker, Kõllaž' Jokk' Gaece in Petsamo, Lapland. Helsinki, 1928. 32 p. illus., fold. map. (Fennia, v. 50, no. 38)

*Contains* report on an investigation of the Kõllaž' Jokk' Gaece esker (69°30' N. 30°40' E.) a comparatively simple special type of glacio-fluvial deposits. An analysis of the recession of inland ice; late glacial drainage and the physiography, etc., of the range are given. The author discards the possibility that this esker was formed by aggradation of the bed of a subglacial stream or at the mouth of a sub- or englacial ice tunnel. He suggests that the accumulations were successively deposited in a glacio-fluvial stream running along the sloping surface of the receding inland ice. Bibliographical footnotes.

**26613. TANNER, VÄINÖ, 1881-1948.** The problems of the eskers, II. The Väçer esker, Inari, Lapland. (Finland. Geologiska kommission. Bulletin, 1930. no. 92, p. 33-39, illus., diags.)

Author shows that this esker was formed by a glacial river running super- or englacially, and not formed by the subglacial tunnel river, postulated in the theories of Strandmark and De Geer

(1897), though these theories are not necessarily invalidated. Tanner suggests that mode of formation of eskers cannot be expressed by a simple theory, that the genesis in each case must be determined separately.

**26614. TANNER, VÄINÖ, 1881-1948.** The problems of the eskers, V. The Tälisvuom'-puoltsha esker in Enontekiö Lappmark. Helsinki, 1937. 28 p., 3 plates, illus., fold. map. (Fennia, 63:1)

*Contains* introductory remarks on the moving of the last ice sheet; areal description of the glacio-fluvial deposits and drainage features; areas of erosion and accumulation, esker chain, erosion valleys; results of morphological analysis of the glacio-fluvial area of this esker (about 69°5' N. 21°40' E.) and conclusion that this and esker formations studied previously by Tanner "have risen by sub-areal accumulation in valleys in the dead land ice margins, but that in no place has the sub-glacial esker theory proved itself applicable to esker formation in supra-aqueous areas." Bibliography (20 items).

**26615. TANNER, VÄINÖ, 1881-1948.** Studier öfver kvartärsystemet i Fennoskandias nordliga delar, I. Till frågan om Ost-Finmarkens glaciation och nivåförändringar. Helsingfors, 1907. 177 p., 23 illus., diags., 6 plates (3 fold.) incl. maps. (Finland. Geologiska kommission. Bulletin, 3:18) *Title tr.:* Studies on the Quaternary system of the northern parts of Fennoscandia, I. On the glaciation and changes of level in eastern Finnmark.

*Contains* (on the basis of studies made during two field trips in 1905), a general outline of the petrology and geological formations and Pleistocene deposits (distribution of moraines and erratic blocks); the ancient littoral formations of the arctic sea and a descriptive list of subfossils of the Quaternary especially shells. Summary in French. Also published in Fennia, v. 23, no. 3, 1906. (see *Arctic Bibliography*, No. 17411). *Copy seen:* DLC.

**26616. TANNER, VÄINÖ, 1881-1948.** Studier öfver kvartärsystemet i Fennoskandias nordliga delar, II. Nya bidrag till frågan om Finnmarkens glaciation och nivåförändringar. Helsingfors, 1907. 127 p., illus., tables, diags., 4 plates (maps, diags.). (Finland. Geologiska kommission. Bulletin, 4:21).

Also published as: Fennia 26:1) **Title tr.:** Studies on the Quaternary system of the northern part of Fennoscandia, II. New investigations on the glaciation and changes of level of Finnmark.

**Contains** report of a study made in 1906 at Nordkap and Nordkyn: observations on the erosion by inland ice, striae, petrology and the distribution of moraines and erratic blocks, all suggesting a movement of glacial masses from south to north. Also, a description of the arctic sea, the altitude of its littoral lines; pumice stone thrown ashore by the Quaternary seas and subfossils of this era indicating changes in sea level, apparently caused by the (indirect) effect of climatic changes. In the final chapter on glaciation, evidence is brought forward against the existence of an interglacial epoch. Summary in French.

**26635. TAYLOR, GÉRALD.** L'optique et les expéditions polaires. Paris, Hermann & Cie, 1952. 24 p. illus., diagrs. *Title tr.*: Optics and polar expeditions.

Contains a republication of five papers which originally appeared in *L'Opticien lunetier et l'optique française*, June-Nov. 1951. They are based on experience of the P.-É. Victor French Polar Expeditions, 1948-50 of which the author participated in three summer missions and (as physician) one wintering on the Greenland icecap (approx. 71° N. 41' W. These papers deal with (1) the protection of eyes in polar regions; (2) atmospheric refraction and mirages; (3) rainbows and halos; (4) auroras and luminescence of the night sky; (5) utilization of optical apparatus. The first paper notes similarity of the problem of protecting eyes in polar regions and on mountain glaciers, and the dissimilarities due to the long duration of light and darkness during the arctic summer and winter. Experience on the icecap with various kinds and colors of glasses and goggles in the summer is described; requirements imposed by light and color of the landscape, winds, frost, etc.; (6) experience with glasses and goggles in the winter, especially during blizzards, also the use of masks is indicated. *Copy seen:* CaMAI.

**26638. TAYLOR, RAYMOND FRANK, 1897-** . Pocket guide to Alaska trees. Washington, D. C., U. S. Govt. Print. Off. 1950. 63 p., illus., map. (U. S. Dept. of Agriculture. Agriculture handbook no. 5, revision of Misc. pub. no. 5)

Descriptions of about 30 trees (names, leaves, bark, wood, growth, range, etc. and briefer notes on a dozen shrubs. "Three general types of vegetation occur: (1) spruce-birch forest of the interior; (2) non-forested tundra of arctic and Bering Sea slopes, and (3) dense hemlock spruce forests of the coast. Coastal forests—existing on the Pacific side of the Alaska Range from the southeastern tip to Kodiak—contain 70 per cent hemlock, 25 per cent spruce, 5 per cent cedar and others. Interior forests contain spruce and birch, and are bounded on the south by the Alaska Range, north and west by tundra and grasslands. The grasslands of the non-forested areas occur in the Alaska Peninsula, the Aleutian Islands, and the south slopes of the Alaska Range. Tundra covers the section bordering the Bering Sea and the Arctic Ocean north of Brooks Range . . ."—SIPRE. *Copy seen:* CaMAI; DLC

**26639. TAYLOR, THOMAS GRIFFITH, 1880-** . Canada; a study of cool continental environments and their effect on British and French settlement. [2d ed. rev.] London, Methuen; New York, Dutton [1950] xv, 526 p., illus., maps. (Methuen's advanced geographies) First published in 1947.

Extensive study based on 12 years residence and travel in the country including a survey of the Northwest

Territories, the Yukon, and the Alaska Highway. Section I, "Position, discovery and general physical features" includes discussion of the North in regard to its exploration, climate, soils and vegetation. Section II, "The natural regions and their varied environments", includes (p. 284-303) the tundra lands (Tuktuk on Port Brabant region, Keewatin, Southampton Island and Ungava, Hudson Strait and Bay, the Canadian Archipelago, Ellesmere, Baffin and Devon Islands, Sverdrup and Parry Islands, Victoria and Banks Islands, the seas north of the mainland). Section III, "The environments as related to men," includes reference to northern regions under: spread of settlement; fishing and the fur trade; forests, paper pulp and water-power; mining industry; communications, population problems, present and future. **Copy seen:** DLC.

Sostavil kapitan Tebiën'kov. [Sanktpeterburg], 1852. 3 p., 1 l., 39 maps. —Gidrograficheskiia zamiechaniia k atlasu siëverozapadnykh beregov Ameri-

ki, ostrovov Aleutskikh i nfekotorykh drugikh miest Siëvernago Tikhogo okeana. Sanktpeterburg, v tipografii morskogo kadetskago korpusa, 1852. 2 p. l., 7, 148, 17, [2] p. **Title tr.:** Atlas of the northwest coast of America from Bering Strait to Cape Corrientes and the Aleutian Islands with the addition of a few parts of the northeast coast of Asia. Compiled by Captain Teben'kov.—Hydrographical notes to the atlas of the northwest coast of America, Aleutian Islands and some other places in the North Pacific Ocean.

Atlas contains 38 maps 20' x 25', viz: map of the general area (15°-67° N. 130° E.-100° W.) 20 maps of northwestern America; 10 maps of Alaska, Kodiak, the Aleutian Islands and adjacent regions; 7 maps of the northeast coast of Asia. These maps have inset maps of bays, harbors, channels, river mouths, etc.

Text ("Hydrographical notes") contains a list and description of earlier maps and atlases of the area and a history of the present undertaking which began in 1825 and was ready for print in 1845. This is followed by a description of each map (or group of maps of the same general region) which includes: an outline of the region and its extent; character of coast line and the coasts, islands, bays, capes, river mouths, etc., data when that region or locality was first sighted or visited; dates and brief account of succeeding landings, explorations, mappings, etc.; description of anchorages, currents and (occasionally) fauna and flora of region, etc.

**26655. THALBITZER, WILLIAM CARL, 1873-** . The Eskimo numerals. (Suomalais-ugrilainen seura. Aikakauskirja, 1908. v. 25, no. 2, p. 1-25)

*Contains* names for numerals from 1 to 21 used by the Eskimos of East and West Greenland, Mackenzie River and southwest Alaska. The Eskimo numerals are new formations developed within the original language common to all Eskimo tribes, the oldest forms being those in the Alaskan dialects. Early linguistic relations between the Eskimos and the Finns, Samoyeds and Koryaks is possible, but there are no traces of non-Eskimo or pre-Eskimo words in their system of numerals or in the etymology of words used for its designation. Eskimos use their fingers and toes for counting, and can seldom grasp more than twenty, i. e. "a man counted to the end."

Traces the development of Eskimo literature from its oral myths, folk tales, songs, and poetry, through a transition period (1721-1905) in which books and newspapers began to be produced, to the modern period characterized by

original Greenlandic writings in prose, poetry and drama. Bibliography (11 items). **Copy seen:** DSI-M.

**26657. THEIS, FRANK V.** Frostbite of extremities; clinical and pathologic considerations in its diagnosis and treatment. (Archives of physical therapy, Nov. 1940. v. 21, p. 663-70, 5 fig.)

*Contains* sections on the physiology of body heat, pathophysiology of frostbite, differential diagnosis, clinical observations, treatment. The author stresses the difficulties in differentiating arteriosclerosis but especially thromboangiitis obliterans from frostbite. Bibliography (12 items).

**Copy seen:** DLC.

**26658. THEISEN, EILERT.** Tanafjorden; en Finnmarksfjords oseanografi. Bergen, J. Grieg, 1946. 78 p., illus. (incl. map), 8 fold. plates (diagns.). (Norway. Fiskeridirektoratet. Skrifter, ser. havunder søkelser. Report on Norwegian fishery and marine investigations. v. 8, no. 7) **Title tr.:** Tana Fjord; oceanography of a Finnmark fiord.

Specialized, mathematical analysis of the dynamic oceanography of a northern Norwegian fiord, 70°30'-71° N. 27°45'-29° E., based on current, density, temperature, salinity, (some) phosphate, oxygen and pH data, June 10-11 and July 1934, June 1939 and 1923, comparative for 1878, 1927, 1930 and 1937; with note on three subsidiary fiords. Bibliography (23 items).

**Copy seen:** DI.

**THELLIER, ÉMILE**, see Cailleux, A., & É. Thellier. Sur la détermination de la couche de sol gelé. 1947. No. 21073.

**26659. THÉRIEN, MERCEDES.** Action synergique de l'acide ascorbique et du sang de rats exposés au froid sur le poids des surrénales de rats normaux. (Revue canadienne de biologie, Juillet 1952. v. 11, no. 2, p. 190-94, 2 tables) **Title tr.:** Synergistic action of ascorbic acid and of blood or rats exposed to cold upon the weight of the adrenals of normal rats.

*Contains* a report on experiments demonstrating that whole blood of rats exposed to cold (and therefore likely to contain a certain amount of ACTH) when injected into rats kept at normal temperature, causes a significant increase of their adrenals; if the recipient rats were pre-treated with ascorbic acid, the weight of the adrenals was further in-

creased following injection of blood from cooled animals. Bibliography (8 items). Summary in English. **Copy seen:** DLC.

**26660. THÉRIEN, MERCEDES, and L.-P. DUGAL.** Ascorbic acid and acclimatization of animals to cold environment. (Federation proceedings, Mar. 1949. v. 8, p. 156)

*Contains* an abstract of a study on guinea-pigs, which, contrary to rats, previously studied by the authors, are unable to synthesize ascorbic acid. As the environmental temperature fell, the guinea-pigs needed more and more of that vitamin. A retention of ascorbic acid during cold, a direct relation between its content in the adrenals and adaptability to low temperature, and a prevention of cold hypertrophy of the adrenals by ascorbic acid, were also observed.

**Copy seen:** DLC.

**26661. THÉRIEN, MERCEDES, and others.** Effets de l'acide ascorbique sur plusieurs variables biologiques normalement affectées par le froid. (Canadian journal of research, Dec. 1949. v. 27, sec. E, no. 6, p. 349-63, tables, diagrams) *Other authors:* J. Leblanc, O. Héroux, and L. P. Dugal. **Title tr.:** Effects of ascorbic acid on several biological variables normally affected by cold.

*Contains* a study on the effects of ascorbic acid administration to guinea pigs exposed to cold. The results showed: an inhibition of thymus atrophy normally occurring during cold and other stress; acceleration of thyroid enlargement; weight increase of the spleen; decrease of histamine content of the adrenal; increase of adrenal activity, as suggested by the cholesterol changes; prevention of initial hypotension due to cold or restitution to normal, if hypertension develops due to long cold exposure. Bibliography (15 items.)

**26662. THÉRIEN, MERCEDES, and L.-P. DUGAL.** La nécessité de l'acide ascorbique pour l'acclimatation au froid du cobaye. (Revue canadienne de biologie, 1947. v. 6, p. 548-51) **Title tr.:** Need of ascorbic acid for acclimatization of guinea pigs to cold.

*Contains* a report on experiments which have demonstrated that resistance and adaptation to cold depend directly on the daily intake of vitamin C; drop in temperature resulted in a corresponding depletion of this vitamin; the amount of

food ingested during cold was the same in all groups. **Copy seen:** DLC.

**26663. THÉRIEN, MERCEDES, and L.-P. DUGAL.** Studies on the relations between ascorbic acid and adrenal function. (Revue canadienne de biologie, Mars 1952. v. 11, no. 1, p. 86)

Contains an abstract on experiments showing that in normal rats ascorbic acid does not prevent the action of ACTH on the adrenal; in fact, both seem to act synergistically on the adrenal weight; this was found by injecting blood of animals exposed to cold into controls, kept at room temperature, receiving or not receiving vitamin C. The latter does not replace the action of ACTH in hypophysectomized animals, but a synergistic action between ACTH and the vitamin upon adrenal weight seems to exist here too. **Copy seen:** DLC.

**26670. THOMAS, CAROLINE BEDELL, and T. A. WARTHIN.** The response of normal dogs and dogs with experimental hypertension to a standard cold stimulus. (American heart journal, Apr. 1940. v. 19, p. 316-29, 5 fig.)

*Contains* a study on normal dogs, dogs with "renal hypertension" and dogs with "hypertension from buffer nerve section". In the normal animals a standard local, cold stimulus was followed by a negative pressor response in 83.2 per cent increasing to 89.6 per cent as the animals became accustomed to the test. In the experimental groups, none was found to correspond with human "normal hyperreactors" nor with subjects suffering hypertension. **Bibliography** (13 items). **Copy seen:** DLC.

**26671. THOMAS, CHARLES W., 1903-**. Ice is where you find it. [1st ed.] Indianapolis, Bobbs-Merrill [1951] 378 p., illus.

*Contains* story of the exploits of the "Greenland Patrol" during World War II, American defense forces in Greenland and adjacent waters following the German occupation of Denmark in 1940. Chapters on the Sabine Island expedition 1943 to destroy a German weather reporting station there; the Jan Mayen expedition 1943, to set up a high-frequency direction finder station; the northeast Greenland operation, 1944: capture of German party on Little Koldeyway, capture of trawler *Enternestiene*; southwest Greenland operation: shore duty based on Narsarssuaq 1945-46; the country and people; the Antarctic expedition 1946-1947. Bering Sea patrol, 1948, with sketches of Alaska and the people who live there. Includes discussion throughout of *Wind* class ships and other vessels. Useful index. **Copy seen:** DLC.

**26672. THOMAS, HAROLD ALLEN, Jr.** Report on investigation of sewage treatment in low-temperature areas; for the Subcommittee on Waste Disposal. (National Research Council. Committee on Sanitary Engineering and Environment. Bulletin, 1950. p. 390-432, tables)

"The design of sewer installations was investigated for large communities in the low temperature area of Alaska and Canada. Factors influencing design include relatively high wind velocities; highly mineralized and cold water; slow biochemical reactions; and high temperatures in sewer lines leading to corrosion,

odor, and reduced treatability. Five major recommendations are proposed: (1) the retention of replicate sewage plant units of each type to reduce freezing hazards from prolonged detention periods, (2) covering or housing of all major units, (3) tank design to facilitate rapid and complete drainage, (4) design and installation of emergency heating units, and (5) determination of tank and filter capacities to allow for the adverse effect of low temperatures on treatment efficiencies and the rate of self-purification in receiving waters. An inexpensive portable heater for settling tanks is suggested to avoid density currents and degasification. A loading-performance relation is being developed to describe lowered efficiency behavior of trickling filters in the colder months."—SIPRE. Bibliography (47 items)

**26682. THOMPSON, WILLIAM FRANCIS, 1888-** The effect of fishing on stocks of halibut in the Pacific. Seattle, University of Washington Press, 1950. xii, 60 p., illus., tables, diagrs. (Publications of the Fisheries Research Institute, University of Washington).

Continuation of a discussion begun by the author in his, *Theory of the effect of fishing on the stock of halibut*, 1937, q. v. Statistics collected by the International Fisheries Commission from 1925 to 1948 form the basis for this study, a specialized, mathematical discussion of normal yield; catch per unit as an index to it; accumulated stock as it modifies the limit of this yield. Includes statistics for western and southern regions of Gulf of Alaska and changes in the yield; evaluation of term "catch per set of gear" and related terms; biological significance of limited productivity of accumulated stocks.

**26688. THOMSON, ANDREW, 1894-**, and **P. C. BREMNER**. Permafrost drilling and soil-temperature measurements at Resolute, Cornwallis Island, Canada. (Nature, Oct. 25, 1952. v. 170, no. 4330, p. 705-706)

"Shallow holes were drilled and ceramic resistance thermometers were inserted at depths of 8, 18, 39, and 60 in. [at this meteorological station 74°41' N. 94°55' W.]. Several deep holes were drilled to depths ranging from 6-453 ft. The overburden consisted of frozen gravel and was 6 ft. thick. The bedrock was limestone with occasional faults and cracks. Cables with temperature elements were inserted in each hole. Short-period fluctuations in temperature occurred at 8 in. depth and decreased with depth, becoming negligible at the 60-in. level. Seasonal temperature changes showed a lag increasing with depth and were perceptible almost to the 50-ft. level where a 6-mo. lag existed. The temperature remained constant for each level beyond 50 ft. The temperatures within 18 in. of the surface remained near the freezing point from Aug. 25 to Sept. 15 which indicates that the water in the active layers takes three weeks to freeze completely."—**SIPRE**. **Copy seen:** DGS; DLC.

Contains: Descriptive notes on 12 species of crane flies new to the fauna of Sweden, including *Austrolimnophila prolicicornis* found in the Abisko region of Torne Lappmark, previously known from Bohemia and Finland.

**Copy seen:** DA; MH-Z.

**26738. TJEDER, BO.** Norwegian Neuroptera and Mecoptera in the Bergens Museum. (Bergen, Norway. Museum, Aarbok; naturvidenskapelig rekke, 1944, pub. 1945, no. 1, p. 1-11, text map)

Contains a systematic list of 32 species of Norwegian neuropters and two species of mecopters in the zoological collection of the Bergen Museum, including at least 11 species native to northern provinces of Norway.

**Copy seen:** MH-Z.

**26739. TJEDER, BO.** Revision of the Norwegian Neuroptera and Mecoptera recorded by W. M. Schøyen. (Norsk entomologisk tidsskrift, 1943. Bd. 6, hefte 4-5, p. 133-39)

Contains a list of 32 species of neuropters and three of mecopters collected mostly by W. M. Schøyen (Siebke and Esmark) and deposited in the Zoological Museum at Oslo; with critical notes and (in some cases) re-determinations by the author; also a list of species added to Norwegian fauna since Schøyen's time.

**Copy seen:** MH-Z.

**26740. TJEDER, BO.** Revision of the Scandinavian Neuroptera (s. str.) and Mecoptera recorded by J. W. Zetterstedt, H. D. J. Wallengren, and others. (Opus-

scula entomologica, 1910. Bd. 5, häft. 2-4, p. 67-114)

Contains a critical revision of Scandinavian Neuroptera and Mecoptera, based on the study of collections of Zetterstedt, Wallengren and many other entomologists. A list (with their modern equivalents) is given of 277 specimens collected by Zetterstedt mostly in Lapland and deposited in the Museum at Lund. Collections of Wallengren (210 specimens) now in the Museum at Malmø, and of other entomologists include some species native to northern regions of Scandinavia. In all, 56 species of Neuroptera and five of Mecoptera represented in the old collections are dealt with in this article; a list of eleven species added now to the Swedish fauna is given on p. 110, also a scheme of the arrangement of fixed labels and specimens of Zetterstedt's Lapland collection, p. 112

**Copy seen:** DA; MH-Z.

**26741. TJEDER, BO.** Some thirty additions to the Swedish fauna. (Opuscula entomologica, 1941. Bd. 6, häft. 2-4, p. 56-63)

Contains descriptive notes on 30 species new to entomological fauna of Sweden, including four flies, *Limonia caledonica*, *Tipula simplicicornis*, *T. lacata* and *Chaetopteryx sahlbergi*, recorded for the first time from Swedish Lapland.

**Copy seen:** DA; MH-Z.

**26744. TOIVONEN, YRJÖ HENRIK, 1890-**. Pygmäen und Zugvögel; alte kosmologische Vorstellungen. (Finnisch-ugrische Forschungen, 1937. Bd. 24, p. 87-126, 4 illus.) **Title tr.:** The pygmies and birds of passage; an old cosmological conception.

Contains comparative data and discussion of a belief held by many Mediterranean, northern Eurasian and North American peoples. It and the stories which derive from it, concern a race of small men who dwell in the land where the migratory birds winter. It has been known (with variations) among the Greeks and Romans, Greenlanders (Olaus Magnus 1555), Finns (Ganander 1789), Lapps, Zyryans, Ostyaks, Voguls, Gil-yaks, Koryaks, Yenisey Ostyaks (i. e. Yeniseians or Kets) and North American Indians. Author concludes that this is a cosmogonic myth on the development

of the world, invented by peoples living beside a great ocean, whose concepts and traditions he explains. On the whole, it is one of the oldest cosmological myths, created by primitive man.

**26745. TOIVONEN, YRJÖ HENRIK, 1890-**. Spuren primitiver Seelenvorstellungen in der Sprache. (Finnisch-ugrische Forschungen, 1941. Bd. 27, p. 205-224) **Title tr.:** Traces of primitive conceptions of the soul in language.

According to the old beliefs of many peoples, certain psychical qualities of man (love, boldness, hate, etc.) are localized in the organs of the body, the living place of the soul: such as the heart, liver, kidney, blood, muscles, and others. Language gives numerous proofs of such beliefs. Examples are offered from the Vogulian, Lapp, Zyryan and other languages.

**26747. TOIVONEN, YRJÖ HENRIK, 1890-**. Ueber Alter und Entwicklung des Ackerbaus bei den finnisch-ugrischen Völkern. (Suomalais-ugrilainen seura. Toimituksia, 1928. no. 58, p. 229-40) **Title tr.:** On the age and development of agriculture among the Finno-Ugric peoples.

Contains a study based on etymologies of certain words. Conclusions: the Finno-Ugric peoples knew a very primitive form of agriculture already in their common Old Country and made a kind of porridge, probably from wheat. Their chief form of production, however, was hunting and fishing. There was progress in agriculture in the Finnish-Permian period with use of hoe, cultivation of rye, wheat, spelt, and barley, invention of the kiln, flail and sieve. In the Finnish-Volga period, the mortar and quern were introduced, and the people learned how to bake bread. The agricultural technique of Voguls, Ostyaks, and perhaps that of

Lapps, later degenerated, because they moved into regions unfavorable for agriculture. **Copy seen:** DLC; InU.

**26757. TOKAREV, S. A.** Shamanstvo u jakutov v XVII v. (Sovetskaja étnografiā. Sbornik statei, 1939. t. 2, p. 88-103) **Title tr.:** Shamanism among the Yakuts in the 17th century.

**Contains** information from archival records relating to the period of the Russian conquest of Yakutia, viz the "Yassak" books, i. e. lists of persons paying taxes: the shamans (males only) comprised three per cent of the entire population and were of all (from lowest to highest) classes of society; their principal

function was the magic treatment of the sick, for which they were paid in livestock. Shamans often were accused of bewitching men and animals, and sometimes were killed; "white" shamans (those of beneficent spirits) are also indicated in these documents, as is some worship of guardian spirits of the livestock; modes of burial, cremation, are noted. It is suggested that the orthodox Russian population also had recourse to services of the Yakut shamans. Summary in French.

Itinerary and brief outline of activities of this expedition led by the author to explore inland areas of the Taymyr Peninsula in 1928. See also *Arctic Bibliography* No. 17828 for similar account in German. **Copy seen:** DLC.

**26769. TOLONEN, K. J.** Kyläteiden suunnittelussa huomioonotettavia näkökohtia. (Maanmittaus, 1940. v. 15, no. 1-2, p. 1-20, illus., diags.) **Title tr.:**

Things to consider in building country roads.

Contains discussion on the planning of location, curves, rises, visibility, junctions and costs of roads. Of interest in relation to northern and far northern areas, are the earliest sections on road width, frost-proof instruction features in various soils, culverts and on construction materials. **Copy seen:** DLC.

**26770. TOLSTIKHIN, N. I.** K geologii Arkhangel'skoi i Vologodskoi gubernii. (Moskovskoe obshchestvo ispytatelei prirody. Bülleten', 1923-24. novaia seriia, t. 32. Otdel. geol. t. 2, vyp. 3, p. 279-95, text map) **Title tr.:** On geology of Arkhangel'sk and Vologda provinces.

Contains the results of a geological survey made by the author in 1921-23, of the northern section of Arkhangel'sk and Vologda, chiefly the watershed between Onega and Northern Dvina Rivers; with data on petrographic formations, Paleozoic sediment deposits, post-Tertiary, glacial, interglacial and post-glacial formations, tectonics and stratigraphy of the region. Summary in German.

**Copy seen:** DLC; MH-Z.

**26771. TOLSTIKHIN, NESTOR IVAN. OVICH, 1896-** . Podzemnye vody merzloz zony litosfery. Moskva-Leningrad, Gos. izd-vo geol. liter., 1941. 201, [3], p. illus., text maps, diags. **Title tr.:** Underground waters of the frozen zone of the lithosphere.

"General information is provided on permafrost, climate, flora, and fauna of the earth. Subterranean waters consist of supra-permafrost waters, inner-permafrost waters, and sub-permafrost waters, and may be classified according to the solid or liquid phase with further subdivisions and subgroups. Subterranean waters affect the formation of ground ice and may emerge on the earth's surface in the form of springs, icing, and hydro-laccolites."—SIPRE.

**Contents tr.:** pt. 1 (p. 4-58). Introduction, General information on the frozen-ground zone, history of investigation, the distribution of frozen ground, climate, flora and fauna, frozen soil zone. Pt. 2 (p. 59-70). Solid phase of underground waters: classification of ground ice, conditions of its formation, relation to surface and ground waters: Pt. 3. (p. 71-179). Liquid phase of ground waters: principles of classification (various types), conditions for the emergence of ground waters to the surface, a scheme of classi-

fication of ground waters: Pt. 4. (p. 180-94). Surface waters: rivers, lakes. Bibliography (189 items).

**26789. TOWNSEND, J. G.**, and others. Tuberculosis control among the North American Indians. (National Tuberculosis Association, Transactions, 1941. v. 37, p. 66-76, table, diagrs.) **Other authors:** Joseph D. Aronson, Robert Saylor and Irma Parr.

Contains report on tuberculin test examinations made among 8,240 Indians of various tribes, including the Tlingit, Haida and Tsimshian Indians of southeastern Alaska, supplemented by x-ray examinations of larger numbers, including that of 3,897 living in southeastern Alaska; and also the results of a B. Calmette Guerin (BCG) antitubercular vaccination. The overall results suggest that the incidence of the disease may be attributed to social and bionomic factors; the character of the tuberculous lesions as determined roentgenologically does not differ significantly from those in white man; the intracutaneous injection of BCG vaccine proved innocuous and was not complicated by a general reaction; the results obtained indicate that both the morbidity and mortality from tuberculosis is significantly lower among those vaccinated with BCG than among unvaccinated control groups; no definite conclusion should be drawn at this time as to the protective value of the vaccine.

Report on work continued in 1949 on the Alaska Insect Project under funds allotted by the National Military Establishment to the Bureau of Entomology and Plant Quarantine. Observations on residual effect of DDT that had been sprayed on several plots in 1948 as a prehatching treatment, and on treatments with several formulations of DDT, in 1949. Areas near Fairbanks and Anchorage were used, where a dosage of 0.1 pound of DDT per acre gave slightly higher mortalities than a dosage of 0.05 pound, both proving highly effective.

(incl. 3 sketch maps) fold. map. (Meddelelser om Grønland. Bd. 149, nr. 7. Copenhagen. Universitet. Mineralogisk-geologiske museum. Communications géologiques, no. 38)

Results of the Danish Thule and Ellesmere Land Expedition, 1939-41, presenting "an account of the main geological results," in combination with those of earlier investigators. Observations by the author were made during journeys along the North Greenland coast between Thule and Washington Land and on central Ellesmere Island from Bache Peninsula to Bay Fiord, Eureka Sound, Greely and Archer Fiords. Fossil and rock collections made by G. Thorlaksson in 1940, supply material on southwestern Ellesmere Island and south-

eastern Axel Heiberg Island. Author gives an account of the field work, remarks on the three available maps of Inglesfield Land (North Greenland). He describes the physiography, general structure (sketch map) historical geology, Paleozoic folding, Mesozoic or Cenozoic orogeny and faulting, stratigraphy (in detail), and the intrusive rocks; Bibliography (76 items) and geological map, scale 1:1,500,000, about 76°-83° N. 60°-90° W. are included.

**Copy seen:** DGS.

**26802. TROELSEN, JOHANNES C., 1913-** . Danish Pearyland Expedition, 1947-50. (Polar record, July 1952. v. 6, no. 44, p. 467-73, illus., map)

Contains note of previous travels (from 1882) in this northernmost part of Greenland, where little investigation has been possible till development of air transport. Then follows account of the expedition of 1947-50 (in which author participated as geologist). Organized by Eigil Knuth and Ebbe Munck, and led by the former, it had headquarters on Jørgen Brønlunds Fjord (82°11' N. 31°30' W.) serviced by Catalina flying boats from a base 560 miles to the south on Young Sund. Work of the field season of 1947-1948, winter of 1948-49; field season 1949, winter 1949-50, and field season 1950, is outlined. A summary of the scientific results in archeology, botany, geology and soil science, meteorology and glaciology; magnetic observations, topography, and zoology concludes the report. **Copy seen:** CaMAI; DLC.

**26803. TROELSEN, JOHANNES C., 1913-** . Geological investigations in Ellesmere Island, 1952. (Arctic, Dec. 1952. v. 5, no. 4, p. 199-210, illus., maps)

Contains an account of the author's studies of the Canyon Fjord region (ca. 80° N. 82° W.), especially of Caledonian Bay, east of Eureka in summer of 1952. Studies of the Ellesmere Island mountains; and previous expeditions to Canyon Fjord are noted; the author's itinerary and his geological investigations are reported, proving the essential correctness of Lauge Koch's early contention that the mountains of North Greenland and Ellesmere Island are of the Caledonian age; author's collecting of plants and microfauna, observations on animals (muskox, hare, fox, wolf, seals, birds) are mentioned. Bibliography (4 items).

**Copy seen:** DLC.

**26804. TROELSEN, JOHANNES C., 1913-** . Notes on the Pleistocene geology of Peary Land, North Greenland. (Dansk geologisk forening. Meddelelser, 1952. Bd. 12, p. 211-20, illus., 2 maps)

Contains notes on glacial valleys, erratic boulders and moraines of former glaciations, of which any striations have been eradicated by frost wedging and solution, and on a more recent, less extensive glacial advance evidenced by the overdeeping of Jørgen Brønlunds Fjord. Marine and kame terraces in Brønlunds and Independence Fjords are compared and discussed. The paper is based on observations made by the author in 1947 and 1948-49 incidentally to other work, and by T. M. Nielsen 1949-50, during participation in the Danish Peary Land Expedition of 1947-50. Bibliography (11 items).

**26806. TROILI - PETERSSON, GERDA.** Über den Kohlensäuregehalt der Atmosphäre. Stockholm, P. A. Norstedt, 1898. 17 p., 4 tables. (Svenska vetenskapsakademien. Handlingar, Bihang, afd. 2, bd. 23, nr. 6) **Title tr.:** On the content of carbon dioxide in the atmosphere.

"Extensive measurements of carbon dioxide were made in the air of the Arctic, North Atlantic and Patagonia. Data are presented in tables. The atmosphere over the Atlantic Ocean contained more carbon dioxide in the cold regions than in the tropical ones. The air in Patagonia contained less carbon dioxide than the air of Scandinavia, but more than the air of the adjoining sea."—*Meteorological abstracts and bibliography*, Mar. 1952. v. 3, p. 287. Bibliography (4 items).

**26808. TROLL, CARL.** Fünfundzwanzig Jahre nordisch-arktische Gletscherforschung unter Leitung von H. W. von Ahlmann. (Geologische Rundschau, 1943. Bd. 34, p. 282-93, incl. map) **Title tr.:** Twenty-five years of northern arctic glacier research under the leadership of H. W. von Ahlmann.

"Ahlmann's studies are primarily concerned with the heat balance of glaciers, their nourishment, ablation and run-off, dependence upon climatic factors, and the conditions of sustenance of glaciers in various climates. Glaciated areas investigated by Ahlmann since 1918 include Scandinavia, the Alps, Spitsbergen, Iceland, and Greenland. Glacier types are classified into temperate, polar, high-polar, and sub-polar glaciers according to the effect of summer temperatures. The variations of glaciers are explained by the ruling influence of temperature on the heat balance of glaciers. A definite relationship also exists between ablation and radiation and heat convection." Bibliography (37 items).—SIPRE. **Copy seen:** DLC.

**26809. TROLL, CARL.** Thermische Klimatypen der Erde. (Petermanns geographische Mitteilungen, März/Apr. 1943. Jahrg. 89, p. 81-89) **Title tr.:** Thermal types of climate on the earth.

The author proposes the use of daily temperature variations in studies of climatic types, previously determined on annual and monthly data; he discusses the presentation of temperature lapses over the whole time by means of thermoisopleths, and the use of such diagrams for characterizing climatic types; then offers examples of types, including Saga-

styr (Lena delta) and Mid-ice on the Greenland icecap. **Copy seen:** DGS.

**26813. TRUPAK, N. G.** Primenenie iskustvennogo zamorazhivaniia gruntov v SSSR. (Stroitel'naia promyshlennost', 1938. v. 16, no. 7:51-54, incl. tables, diags.) **Title tr.:** The utilization of artificially frozen ground in the U.S.S.R.

"The use of artificially frozen ground was initiated in Russia in 1928 during the sinking of a mine shaft. It was also extensively applied a decade later when Moscow subway was built. The process involves the creation of an ice wall around the structure to be erected. Holes are drilled in the ground and pipes with sealed ends are inserted into them. These pipes hold smaller, perforated pipes through which a refrigerant flows. The ground freezes as the refrigerant circulates through the compressor, pipes, cooling coils, and compressor. Soils, high in moisture content, are well suited for freezing. Clay is more difficult to overcome. The cost of artificial freezing is considerably less than that of chemical solidification."—SIPRE.

**26814. TRUPAK, N. G.** Zamorazhivanie gruntov v stroitel'noi industrii. Moskva, Gos. izd-vo stroit. lit-ry, 1948. 324 p., illus., diags. (2 fold.), tables. **Title tr.:** Frozen ground in the building industry.

Monograph deals with the problems of the freezing of the ground by natural or artificial means, during the digging of tunnels, mines, shafts, etc. The methods described are widely used in the subarctic and arctic areas of Siberia. "A theoretical review of physical and mechanical properties of frozen ground is followed by a detailed description of the entire process of artificial freezing of ground during the construction of foundations. Holes are drilled around the contour of the projected structure at 1.25 to 1.50 meter intervals and in rows 2.5 to 3.0 m. apart. Pipes 100-115 mm. in diameter with one end sealed are placed in the holes. Open pipes 35 mm. in diameter are lowered into the larger pipes and a refrigerant is circulated through the system until the surrounding ground is frozen solidly. The entire process required 40 to 60 days."—SIPRE. Bibliography (38 items).

Otdelenie geologo-geograficheskikh nauk, p. 170) Other authors: S. P. Kachurin and A. I. Popov. **Title tr.:** Permafrost conditions of the Soviet and non-Soviet Far East.

"A brief description is given of existing permafrost conditions in various physical-geographical regions. The description includes data on the thickness of the permafrost, the active layer, and supra-permafrost horizons. Data are presented on the trafficability of the areas and conditions relating to railroad construction. Maps showing the permafrost distribution are included. The assembled material is to serve as an aid in establishing the relationships between the development of seasonal and permanent frost and geographical peculiarities of given localities."—SIPRE. **Copy seen:** DLC.

**26841. TUMEL', V. F.** Nekotorye geograficheskie itogi sovetskogo merzlotovedeniia. (Akademiia nauk SSSR. Izvestiia. Seriia geograficheskai i geofizicheskai, 1946. t. 10, no. 2, p. 205-212) **Title tr.:** Some geographic findings of Soviet permafrostology.

"A review of U.S.S.R. permafrostology research from 1930 to 1945 is presented. The distribution and the thickness of permafrost in the northeastern U.S.S.R.

was determined more accurately. Hydrogeological investigations indicated that ground water in the Indigirka River region penetrated a 200-m. layer of permafrost and formed extensive icefields during winter. The extent of ground ice distribution was studied, and its origin traced to the glaciation period. The degradation of permafrost was ascertained by comparing Sumgin's recent data with Middendorf's data collected about 100 yrs. ago. The concept of the active layer and its dynamics during freezing and thawing was developed. A relationship was established between the characteristics of the active layer, the character of the permafrost and the relief."—SIPRE. Bibliography (19 items). Summary in English.

**26843. TUMEL', V. F.** O merzlotie v bassejne reki Vikhorev. (Akademiia nauk SSSR., Trudy komissii po izucheniiu vechnoi merzloty, 1935. t. 4, p. 7-93, incl. illus., tables, maps) **Title tr.:** Permafrost in the Vikhoreva River basin.

The Vikhoreva is a left tributary of the Angara, 768 km. above the latter's confluence with the Verkhnyaya Tunguska. "The basin of Vikhoreva located between 56°10' and 56°50' N. lat., and 100°25' and 100°30' E. long., occupies an area of approximately 5600 km<sup>2</sup>. The river attains a maximum width of 33 m. and a depth of 1.85 m. at Chupino, where the velocity is 1.5 m./sec. The area is characterized by low soil temperatures, an impervious permafrost layer, and the thawing of the suprapermafrost layer to a maximum of 70 cm. in swampy areas and 200 cm. along well drained terraces.

The seasonal freezing and thawing of saturated soils accelerates weathering processes and results in slides and soil flows which modify existing landforms."—SIPRE. Bibliography (18 items).

**26849. TUORI, HEIKKI.** Sounding through sea and lake ice in Finland. (Polar record, Jan. 1952. v. 6, no. 43, p. 336-39, illus.)

**Contains** description of a simple method already in use at the beginning of the 18th century, and still worthwhile for special soundings of a local nature, viz. in areas of shallow water (to 20 m.) where the ice does not shift (lakes, waters of inner coastal archipelagos), or where other methods are not preferred. It consists in marking a rectangular lattice on the ice, and at fixed intervals drilling holes through which the soundings are made. The equipment used by the Hydrographic Office of Finland for this work in coastal waters and inland lakes is described and figured, as well as the routine of measuring, drilling sounding, etc., and the transfer of soundings to maps.

**26851. TUOVINEN, ARNO.** Talviniputuksesta. (Metsä-taloudellinen aikakauslehti (Finska forstföreningen), 1950. v. 65, no. 1, p. 16-19, 24, illus., diagrs.) **Title tr.:** On winter bundling.

**Describes and illustrates** methods and equipment (bundling frames or cradles) for assembling 2-meter length logs in bundles of approx. 2 meter diameter.

This procedure is increasingly favored in Finland as winter work carried out at shore storage sites or on the ice of frozen-over waterways. After the ice goes out, the ready-bundled logs are floated down to mills. Similar equipment and methods used in Sweden and the U.S.S.R. are also briefly noted. Summary in English.

**Copy seen:** DA.

**26852. TURI, JOHAN OLAFSSON.** Turi's book of Lappland; ed. and tr. into Danish by Emilie Demant Hatt, tr. from the Danish by E. Gee Nash. *Original title:* "Muittalus Samid Birra". New York and London, Harper & Bros., [1931] 293, [2] p. incl. 14 plates (part. double), front. (part.)

**Contains** an account of Lappish life comprised of notes written down by a Fell-Lapp from Kautokeino. Though without any schooling, he could write and read in his own language and Finnish, and had lived all his life as a reindeer nomad and hunter. It took about one year to write down his notes (in 1907-08) with the editing assistance of Mrs. Hatt. The book touches upon almost all the aspects of the nomadic life: work and customs, care of the reindeer, the art of trapping, etc. It includes a section on Lapp doctoring (p. 148-72), tales and sagas about stallos (giants) and uldas (fairies); Lapp songs (joking), sagas about Lapp origin and wanderings; remarks on happenings in Kautokeino and on the hard life of non-domesticated animals in Lapland. The 14 extensive drawings by the author illustrate episodes and aspects of Lappish life. First published in Danish (1910) this was translated into German (1912), Swedish (1917), and English (1931). **Copy seen:** DLC.

**26853. TURI, JOHANN OLAFSSON, and P. A. TURI.** Lappish texts written by Johan Turi and Per Turi. With the cooperation of K. B. Wiklund, ed. by Emilie Demant-Hatt. København, Høst & søn, 1918-19. (Danske videnskabelnes selskab. Skrifter, historisk og filosofisk afdeling, række 7, af. 4, no. 2, p. 95-280)

**Contains** texts written down by two native Lapps, uncle and nephew, wholly engaged in the tending of reindeer, who sent their note-books since 1908 to Mrs. Emilie Demant-Hatt. The texts of Johan Turi represent the Kautokeino dialect, and though phonetically imperfect, they are valuable from the viewpoint of lexicology, phraseology, and

syntax. Those of Per Turi represent the Jukkasjärvi dialect and are written with fairly consistent orthography. These texts consist of 116 narratives in Lappish with parallel English translation, grouped as: magic and medicine (39 accounts of sacrifices in former times, deeds of shamans, charms and healing of diseases); "noaide" tales (16 stories about shamans and sorcerers); "Ulda" and other tales (41 stories about uldas or fairies, jocular stories, beliefs, riddles, omens, etc.); reindeer and hunting (9 stories); anecdotes from daily life (8). Linguistic footnotes are added by K. B. Wiklund, and folkloristic and ethnographic notes (p. 269-76) by the editor.

**26856. TURQUETIL, ARSÈNE LOUIS EUGENE, Bishop, 1876-** . Have the Eskimo the concept of a supreme being? (Primitive man, 1936. v. 9, no. 3, p. 33-38)

*Contains* sophistical reasoning on Eskimo deities: the Eskimo believes that the good spirits prevail over evil ones, and that the guardian spirits who assist the medicine man are good spirits; in illness, the Eskimo, lacking medicinal plants in his barren environment, depends on the medicine man's intervention with the spirits; the medicine man can also, using magic, lay a curse upon his enemy; beyond this there is no evidence that the Eskimo believes in any hierarchy of good spirits, or in one being superior to all others; the name of goddess *Nulia* 'pol, however, can be interpreted as "the one who has things produced", she is the mother of all men. Author has lived in northern Canada since the early 20th century as Oblate missionary.

**26857. TUSHINSKIĬ, G. K.** Èvolutsiia snezhnoi tolshechi; vzniknovenie firma i gletchernogo l'da. (Voprosy geografii, 1951. sbornik 24, p. 350-79, 10 illus. incl. 3 plates (1 fold.), diags.) *Title tr.:* The evolution of snow thickness; genesis of firn and glacier ice.

"A comprehensive summary of experimental and field studies on the evolution of snow thickness which brings about the formation of friable horizons within snow, giving rise to avalanches of old dry firn and of snow layers, on means of forecasting snowslides, and on the process of firn formation and the transformation of firn into glacial ice. These studies were carried out at the Khibiny geographical station of Moscow University and on the Ptysh and Alibek glaciers. The following topics are discussed: the factors of firn formation, namely the temperature régime of the snow cover and crystallization, developmental stages in the formation of snow cover; variations in the stratigraphy of snow thickness such as the process of transition of one type of snow into another and the conditions favoring the formation of friable horizons; the evolution of the mechanical properties of snow thickness; the compressibility of snow; determination of the degree of cohesion between different layers of snow;

and the classification of snow types. Photographs illustrating various stages in the formation of firn are presented."—*Meteorological abstracts and bibliography*, Oct. 1952. v. 3, no. 10, p. 1057-58.

**26870. TYSLOWITZ, R., and E. B. ASTWOOD.** The influence of the pituitary and adrenal cortex on resistance to low environmental temperatures. (American journal of physiology, Mar. 1942. v. 136, p. 22-31, 6 fig.)

Contains a study on hypophysectomized rats 35-40 days old, exposed to a 0° C. environment; over the first four post-operative days such rats became increasingly sensitive to cold, but thereafter showed a rather constant response to it. Crude pituitary extracts or purified corticotrophin increased the cold-resistance of hypophysectomized animals when administered one hour to 14 days prior to exposure; these extracts were ineffective in the absence of the adrenals but were active after thyroidectomy. Adrenal cortical extracts increased the resistance of hypophysectomized animals without thyroids or adrenals. The protection against cold offered to hypophysectomized rats by pituitary extracts paralleled the corticotropic activity. Bibliography (15 items).

**26880. U.S.S.R. GLAVNOE UPRAVLENIE PO DELAM OKHOTNICH'EGO KHOZIAISTVA.** Pushnye bogatstva SSSR. Moskva, Gos. izd-vo tekhn. i ekon. lit-ry no voprosam zagotovok, 1949. 180 p., illus., tables. **Title tr.:** The fur riches of the U.S.S.R.

Contains a series of articles on economically important fur bearers written by experts. Each article offers data on the life and ecology of the animal; ways of trapping or kill; the pelt and its value; processing the fur; farming, if any extant. In addition to the introductory article (p. 5-16) on hunting and farming of animals in the U.S.S.R., the following deal with arctic forms: polar fox trapping (p. 39-58), and Tyulen (Seal) Island and its hunting treasures (p. 171-79), the latter dealing with the seals and rookeries of this tiny island located near Mys Terpeniya in the Gulf of Tartary (49° N.-146° E.)

**26883. U.S.S.R. TSENTRAL'NŪ GO. SUDARSTVENNŪY ARKHIV DREV. NIKH AKTOV.** Otkrytiia russkikh zemleprokhodtsev i poliĀrnykh morekhodov XVII veka na Severo-Vostoke Azii; sbornik dokumentov. Sostavlenn N. S. Orlov, pod red. A. V. Efimova. Moskva, Gos. izd-vo geogr. lit-ry, 1951. 619 p., maps, facsim., incl. 19 fold. maps and 1 fold. facsim. in pocket. **Title tr.:** Discoveries of Russian travelers and polar seafarers in northeastern Asia during the 17th century; a collection of documents, assembled by N. S. Orlova under the editorship of A. V. Efimov.

Contains 231 documents or fragments of such, referring directly to geographical discoveries, and presenting incidentally considerable data on early Russian efforts at conquest, material is arranged in chronological order, in the following sections: (1) sea voyages to Mangazeti (a district east of Obskaya Guba, on the Taz River); (2) voyages down the Siberian rivers to the Arctic seas to the time of Dezhnev's voyage in 1648; (3) commercial activities on the Lena and other rivers by merchants of the Gusele-nikovs and Popov; (4) soldiers and hunters of the Yakutsk fort in the 1640's; the march of S. Dezhnev and F. Popov; (5) voyages in the Arctic and Pacific Ocean after Dezhnev's journey of 1648;

(6) the Anadyr fort under the bailiffs of Dezhnev and K. Tranov; (7) soldiers and traders of the Yakutsk fort, preparations for the voyages of 1650-1680; (8) biographical data on S. Dezhnev. Notes on the maps (p. 541-46) and extensive geographical (various forts indexed under "ostrog") and personal indexes (p. 547-99) are included. **Copy seen:** DLC.

Alaska. Survey of human adjustment problems in the northern latitudes. Morale survey of personnel assigned to Ladd Air Force Base, by Ernest L. McCollum, Feb. 1951. 39 p., tables.

*Contains* findings of a morale survey which emphasizes the following facts: 33 per cent of the airmen plan to reenlist; the others are younger men who have adjusted poorly to the demands of the service. Those with the lowest morale indicate displeasure with the services provided for them, lack of interesting things to do, inadequate social outlets, lack of faith in military law and framework.—From summary.

**26886. U. S. ARCTIC AEROMEDICAL LABORATORY.** Ladd Air Force Base, Alaska. Survey of human adjustment problems in the northern latitudes. Study of adjustive, non-adjustive behavior as reflected by variations of shifts in disposition by Air Force personnel assigned to Montana, Pre-Winter, by Anthony Debons. Feb. 1951. 20 p. (tables, diagrs.)

*Contains* a report on the technique and results of a survey, the latter indicating that the background did not appear to have any significant relation to the individual's adjustment status, but the men from the south were less content in Montana than the "northerners"; 35 per cent of the sample were maladjusting, 27 per cent were adjusting and 38 per cent were non-adjusting. Sociability and feelings of independence distinguish the three groups. Criteria for determining the degree of adjustments are given. Bibliography (2 items). **Copy seen:** DSG.

frozen soils. Fiscal year 1951 report. Wilmette, Ill., Snow, Ice, Permafrost Research Establishment, June 1952. 2 v.: xi, 88 p. 109 plates and append. A, 2 p., 4 plates; v. 2, append. B (investigational data), 17 tables, 153 plates. (SIPRE report no. 8).

"Results of exploratory tests to determine methods to describe, classify, and determine the strength characteristics of frozen soils are presented. Ten types of soils including sands, sandy gravels, silt and clay soils, and one peat soil were artificially frozen and tested. Artificially frozen ice specimens were submitted to the same tests. Results show that the temporary strength of frozen soils increases with decreasing temperature below the freezing point. Clean, cohesionless materials exhibited the highest frozen strengths and clays the lowest. Clean, uniformly graded sand has greater temporary strength in the frozen state than well-graded sandy gravels. The temporary compressive strength of frozen soils is 4-9 times greater at  $-10^{\circ}$  F. than at  $31.5^{\circ}$  F. Ice samples showed no definite correlation of temporary compressive strength with temperature. Peat and clay soils are more susceptible to plastic deformation than the more coarse-grained materials tested. Ice showed the least plastic deformation of all. Studies of ice crystals showed that crystal structure of ice specimens frozen simultaneously with soil specimens is not indicative of ice crystal structure in segregated ice lenses in frozen soil. A tentative description and classification system for frozen soils is appended."—SIPRE.

**26896. U. S. BUREAU OF RECLAMATION. ALASKA DISTRICT OFFICE.** Alaska; a reconnaissance report on the potential of water resources in the Territory of Alaska for irrigation, power production and other beneficial uses . . . [Washington] 1952. xiv, 287 p. front., illus., plates, maps (part fold.), diagrs. (part fold.). (U. S. Congress, 82d, 1st sess. House document 197). Also pub. in a preliminary edition reproduced from typewritten copy and dated May 2, 1949: 324, 3 l. illus., maps, diagrs.

*Contains* an introductory chapter (1) on the purpose of the report: extension of reclamation laws to the Territory of Alaska, investigation of hydroelectric power potentialities with the aim of producing cheap power for existing and potential industries, mining, agriculture, transportation, etc. (2) The land and the people (p. 6-24): physical land characteristics; geological history; regions and river basins; climate; exploration; settlement, population, government. (3) Present development (p. 25-73): fisheries and wildlife resources; timber products; agriculture; minerals; manufacture and trade; transportation and communication; land ownership; utilities; recreation.

(4) A look at tomorrow (p. 74-135): the next 10 years; fisheries and wildlife resources; agriculture and forest products; minerals and mining; manufacture, commerce, transportation, etc. (5) Using the water (p. 136-85): irrigation; drainage; flood control; navigation; municipal and industrial water supply; power. (6) Wealth from water (p. 186-90). (7: p. 191-324). Federal and territorial agencies (18) which cooperated in the production of this report, with statistical and other data on their activities and those phases of Alaskan life and resources with which they are concerned: agriculture, mining, climate, geology, native peoples, fish and wildlife, land, roads and communications, railroad, aeronautics, etc., public health, national parks, hydroelectric power development. This section offers a comprehensive factual survey of conditions in Alaska as of 1948-49, and the developmental programs of these 18 cooperating agencies.

**26899. U. S. COAST GUARD.** International ice observation and ice patrol

service in the North Atlantic Ocean. 1941, 1948. Washington, D. C., U. S. Govt. Print. Off., 1950. 118 p. in 2 pts. plates, tables, charts (part fold.), diags. (Its: Bulletins no. 31, 34). In continuation of reports for 1913-1940, 1943-1949 (see *Arctic Bibliography*, No. 18305).

1941. Soule, F. M. and C. A. Barnes. Physical oceanography of the ice patrol area in 1941. p. 1-62. The major portion of this study is devoted to volume of flow, minimum and mean temperature and temperature-salinity relationships of the Labrador Current in the Grand Banks area, with the influence of Atlantic Current waters included. Beginning on p. 31 is a short discussion of oceanographic observations made between South Wold Island off Labrador (about 53°47' N. 55°55' W.) and Cape Farewell, Greenland (59°47' N. 43°50' W.) July 24-29, 1941; it is accompanied by chart of dynamic topography of the sea surface, and vertical temperature distribution diagram. Data for the season are given in tables.

1948. Soule, F. M., H. H. Carter, and L. A. Cheney. Oceanography of the Grand Banks region and Labrador Sea, 1948. p. 67-118, incl. 20 p. of tables, 15 fold charts and diags., illus. This is a report on work on the Grand Banks during Apr.-June, and in the Labrador Sea and Davis Strait, July 4-Aug. 9, in the U. S. C. G. cutter *Evergreen* (with notes on outfit for oceanographic use). Introductory discussion of suitability of the tender-class cutter (180-foot) when hove-to, in wind velocities ordinarily experienced, for working oceanographic stations successfully. Description of the dynamic oceanographic research in both areas, dealing with the problems of the Labrador Current and other water masses in Davis Strait, and their extension to the limits of the Grand Banks; the volume of flow, velocities, temperature-salinity relationships, and directions. The discussion involves data on the West Greenland Current and Atlantic Current. Throughout, the 1948 material is compared with measurements made prior to 1941. Tables of 1948 data are given, and dynamic topographic maps supported by vertical temperature sections.

**Copy seen:** CaMAI.

**26900. U. S. COAST GUARD.** International ice observation and ice patrol service in the North Atlantic Ocean, season of 1949. Washington, D. C.,

U. S. Govt. Print. Off., 1951. 116 p. diags., maps (part fold.), tables. (*Its*: Bulletin no. 35) In continuation of reports for 1913-1948 (see items above).

*Contains* in the first section by L. A. Cheney (p. 1-48) report on the patrol of 1949. The year was marked by a scarcity of icebergs. Ice conditions were such that the two patrol vessels made no cruises, ice observation service being carried out by aircraft alone. Monthly reports and charts of ice occurrence are given, with chronological tabulation of ice and obstruction reports both south and north of 50° N. lat.; the effect of abnormal barometric pressure distribution on sea ice and icebergs; iceberg census of Baffin Bay.

Pt. 2. Physical oceanography of the Grand Banks region, the Labrador Sea and Davis Strait in 1949, by F. M. Soule (p. 49-116) reports on investigations of the Atlantic Current; the temperature-salinity relationships of the water masses of the Grand Banks region in 1949 and the subnormal volume of the Labrador Current in that region (due to deficient contribution of the West Greenland Current to the Labrador Current); the division of the Labrador Current north of the Grand Banks; the thermal conditions of the intermediate water of the Labrador Sea and the circulation in that Sea, as well as in Davis Strait and southern Baffin Bay; the nearly total absence of the Irminger Current at Cape Farewell in 1949, etc. *Appendix* (p. 89-115) presents tables of oceanographic data assembled, stations occupied, etc.

*Copy seen:* CaMAI; DWB.

**26901. U. S. COAST GUARD.** International ice observation and ice patrol in the North Atlantic Ocean, season of 1950. Washington, D. C., U. S. Govt. Print. Off., 1951. 127 p. tables, fold. charts. (*Its*: Bulletin no. 36)

*Contains* a section by L. A. Cheney (p. 1-59) reporting the 1950 activities and results of five surface cruises by two patrol vessels and 75 ice observation flights by two aircraft: data on ice conditions and their comparison with averages; a general discussion of ice conditions north of 50° N. lat.; radio communications of ice information; analysis of effects of winds and currents on the movement of drift ice and icebergs, with detailed chronological tables of ice conditions and ice obstructions, also monthly ice distribution and monthly isothermal charts.

The second section, Physical oceanography of the Grand Banks region and the Labrador Sea in 1950, by F. M. Soule (p. 61-127) deals with investigations conducted from the oceanographic vessel *Evergreen* as in previous years. Data on circulation, temperature-salinity relationships of the three water masses of the region and comparisons with earlier years; volume of flow and temperature of the Labrador Current in the Grand Banks area, and north of it are given. The division of the Labrador Current into eastern and western branches; northern limits of the Atlantic Current in relation to the strength of the Labrador Current; thermal characteristics of the intermediary water of the Labrador Sea and circulation in that sea; the Irminger Current, its continuing deficiency, causes thereof, etc. are dealt with. *Appendix* (p. 94-127) gives tabulation of the stations occupied and oceanographic data collected on them.

*Copy seen:* CaMAI; DWB.

**26902. U. S. COAST GUARD.** International ice patrol. Washington, D. C., U. S. Coast Guard. Public Information Division, 194? 26 p. illus. sketch maps. (C. G. 171)

*Contains* brief popular account (undated but probably prepared about 1948) of the history and work of the International Ice Patrol in the North Atlantic. It was inaugurated following the International Conference on the Safety of Life at Sea, London, Nov. 1913, the work being carried out by arrangement of the contracting governments, by the U. S. Coast Guard since 1914, excepting 1917, 1918 when no patrols were undertaken, and 1942-45 when international service was suspended. The contractual arrangements are summarized. The ocean currents and icebergs of the Newfoundland-Labrador-Greenland waters are briefly characterized and diagrammed. Nine photographs illustrate ice conditions and patrol vessel.

**26907. U. S. CONGRESS. HOUSE. COMMITTEE ON MERCHANT MARINE AND FISHERIES.** Alaska salmon fishery. Hearings before the Committee on Merchant Marine and Fisheries, House of Representatives, Seventy-fifth Congress, third session, on H. R. 8344. February 1 and 2, 1938. Washington, U. S. Govt. Print. Off., 1938. iii, 195 p. incl. tables.

*Contains* statements and testimony of government officials, the chairman of the International Pacific Salmon Fisheries Commission, representatives of labor unions and packing companies, also other interested persons, on a bill to prohibit vessels of foreign origin from fishing for salmon east of the international boundary in Bering Sea, within the 100-fathom depth line. *Appendices* give laws and fishing regulations in Alaska, especially Bristol Bay; also data on catch of Japanese fisheries, Japanese imports and exports of fishery products for 1934, and number of persons and vessels employed in Japanese fisheries, Japanese imports and exports of fishery products for 1934, and number of persons and vessels employed in Japanese fisheries in 1933.

*Copy seen:* DLC.

**26908. U. S. CONGRESS. HOUSE. COMMITTEE ON MERCHANT MA-**

**RINE AND FISHERIES.** Alaskan fisheries. Hearings before a subcommittee of the Committee on the Merchant Marine and Fisheries, House of Representatives, Seventy-Ninth Congress, second session, pursuant to the authority of H. Res. 38, a resolution authorizing investigation of the national defense program as it relates to the Committee on the Merchant Marine and Fisheries. Washington, U. S. Govt. Print. Off., 1946-47. 2 v. (iii, 246 p.)

Testimony, statements and reports contributing to the Committee's authorization to study and investigate "all problems concerning the operation of the Alaska fisheries including the allocation of traps, Indian priorities, regulations and related matters." Discussion of control and restriction of fisheries by a Territorial office rather than the federal Dept. of the Interior; extension of Indian reservations into the commercial fishing area of Alaska; limitations of mobile fishing gear, traps and canneries. **Copy seen:** DLC.

**26909. U. S. CONGRESS. HOUSE. COMMITTEE ON MERCHANT MARINE AND FISHERIES.** Fisheries in Alaska. Hearings before the Committee on the Merchant Marine and Fisheries, House of Representatives, Sixty-seventh Congress, first [-second] session, on H. R. 2394 . . . Washington, U. S. Govt. Print. Off., 1921-22. 2 v. (121 p. paged continuously) tables. Part 2 has subtitle: Hearings before the subcommittee of the Committee on the Merchant Marine and Fisheries on Fish and Fish Hatcheries [etc.] Hearings held Oct. 27, 1921-Jan. 18, 1922.

*Contains* testimony and statements of representatives of cannery owners, salmon-trap operators, fishermen's organizations and Alaskan natives, as well as spokesmen for the Fishery Bureau and other U. S. Government agencies. The bill provides for government regulation of salmon fishing in streams and lakes of Alaska, and for three miles beyond the mouths of streams. It represents the beginning of a struggle to eliminate stationary fish traps from Alaskan waters. **Copy seen:** DLC.

**26910. U. S. CONGRESS. HOUSE. COMMITTEE ON MERCHANT MARINE AND FISHERIES.** North Atlantic International Ice Patrol. Hearings before the Committee on Merchant Marine and Fisheries, House of Representatives, Seventy-fourth Congress, sec-

ond session, on S. 4348, an act to promote safety at sea in the neighborhood of ice and derelicts, and for other purposes. June 10, 1936. Washington, U. S. Govt. Print. Off., 1936. ii, 9 p.

The bill provided for congressional ratification of the renewal of an agreement reached in London, 1929, by The International Convention on Safety of Life at Sea, whereby thirteen other countries agreed to share operating expenses with the United States, the latter carrying out the patrol; an agreement first reached in 1914. **Copy seen:** DLC.

**26911. U. S. CONGRESS. HOUSE. COMMITTEE ON NAVAL AFFAIRS.** *Jeannette* inquiry. Before the Committee on Naval Affairs of the United States House of Representatives, Forty-eighth Congress. Washington, U. S. Govt. Print. Off., 1884. 2 p. l., 1046 p. (48th Cong., 1st sess. House. Misc. doc. 66)

Investigation of alleged unfair treatment of Jerome J. Collins by Lieut. G. De Long on the *Jeannette* arctic expedition (by Bering Strait, Kolyuchin Bay, East Siberian Sea, northwest into the Arctic Basin). Witnesses included J. W. Danenhower, G. W. Melville, and others of the *Jeannette* party, and relatives of deceased members (J. J. Collins, meteorologist, and G. W. De Long, leader). Journals, letters, telegrams and notes (official and unofficial) relating the expedition or to the search for its missing members form part of this record of the hearings. It includes lengthy testimony bearing upon the life and relations of the expedition's personnel, dissensions during the voyage, 1879-81, and the search for survivors in the Lena delta during 1882. **Copy seen:** DLC.

**26912. U. S. CONGRESS. HOUSE. COMMITTEE ON POSTOFFICE AND POST ROADS.** Air mail service for Alaska. Hearings before the Committee on the Post office and Post Roads, House of Representatives, Seventy-sixth Congress, third session, on H. R. 9851 and H. R. 9992, bills authorizing special arrangements in the transportation of mail within the territory of Alaska. June 13, 1940 . . . Washington, U. S. Govt. Print. Off., 1940. iii. 26 p. incl. tables.

*Contains* statements by the Alaska delegate to Congress, representatives of the Post Master General, the National Council on Business Mail, Air Transport Association of America, and the Air

Line Pilots Association, regarding bills calling for star route air mail service throughout Alaska (carrying of all classes of mail without special air mail rates).

*Copy seen:* DLC.

**26913. U. S. CONGRESS. HOUSE. COMMITTEE ON PUBLIC LANDS.** Alaska. Hearings before the Subcommittee on Territorial and Insular Possessions of the Committee on Public Lands, House of Representatives, Eightieth Congress, first session, pursuant to H. Res. 93. Aug. 30, 1947, to Sept. 12, 1947. Washington, U. S. Govt. Print. Off., 1948. iv. 420 p. (*Its*: Committee hearing no. 31)

Hearings were held in Anchorage, Seward, Fairbanks, Juneau, Petersburg, Wrangell, and Ketchikan, and at supplemental visits of the Subcommittee to Point Barrow, Nome, Kodiak and Cordova. Its purpose was to obtain views of Alaskan residents on Alaska statehood, the opening of public lands on expanded basis, on operation of the Alaska Railroad, coastwise shipping, air transport, and overland hauls, and on residents' willingness to bear taxation concomitant with statehood and to contribute to the Federal Treasury as do citizens of other states.

*Copy seen:* DLC.

**26914. U. S. CONGRESS. HOUSE. COMMITTEE ON PUBLIC LANDS.** Alaska veterans' homesteading act of 1947. Hearings before the Subcommittee on Public Lands of the Committee on Public Lands, House of Representatives, Eightieth Congress, first session, on H. R. 868 [and others]. Washington, U. S. Govt. Print. Off., 1947. iii, 260 p. (*Its*: Committee hearing no. 15) Hearings on H. R. 868, H. R. 1548, H. R. 4059, and H. R. 4060, Mar. 24, 25, 31, May 7, 8, June 7, 12, 26, 1947.

Contains statements of veterans organizations, government officials, and residents of Alaska, etc., with numerous letters and quotations from newspapers, mostly voicing decided opposition or approval of the bills, some including also information on agriculture, forest problems, grazing, public lands, and (in general) economic conditions in Alaska. The first two bills, known as the Lemke and Peden bills respectively, included provision for considerably greater acreage in homesteads than earlier laws allowed.

*Copy seen:* DLC.

**26915. U. S. CONGRESS. HOUSE. COMMITTEE ON PUBLIC LANDS.**

Compilation of material relating to the Indians of the United States and the Territory of Alaska, including certain laws and treaties affecting such Indians, by Subcommittee on Indian Affairs. H. R. 66 (81st Cong., 2d Sess.), June 13, 1950. ix, 1110 p., tables, maps. (*Its* Serial no. 30) Washington, U. S. Govt. Print. Off., 1950.

Prepared in the Legislative Reference Service, Library of Congress by Wm. H. Gilbert, and others, a factual analysis of Indian affairs in terms of individual Indian tribes, as an aid in solution of the problems involved in Federal control.

"This paper presents (a) descriptive and statistical summaries by tribes, and (b) legislative analysis by tribes. The first part includes historical summaries, contemporary census data, and statistical material gathered by the field offices of the Indian Bureau. The second part consists of legislative histories of the various tribes. A map is also presented for each important tribal group, showing its location and range, past and present. In addition there have been presented at the beginning, two alphabetical lists: (1) a directory of tribes and bands, and (2) a list of Indian land units. Basic historical accounts for most of the tribes have been extracted from the Handbook of the American Indian. Supplementary census material has been secured from the Indian census reports of 1890, 1910 and 1930. Current data on the tribes as they at present appear on the various reservations are secured from answers to a questionnaire which was submitted to the various area offices of the Indian Bureau . . . The last available facts on Alaskan tribes and bands are contained in the census of 1910. In recent years little attention has been given to tribal subdivisions in Alaskan reports . . . To these may be added the series of economic surveys made of Alaskan native villages, particularly in the period of 1938-41, available in the files of the Indian Bureau and presented here in appendix C."—Introduction, p. 3-5.

Contains 5 parts: (1) directory of tribes and bands; (2) reservations; (3) histories and sociological conditions of tribes; (4) analysis of Federal law, (5) maps of tribes; and 5 appendices on: (a) conditions; (b) finance; (c) Alaskan native villages; (d) tribal government; and (e) tribal and reservation data from

records of the Bureau of Indian Affairs. The directory (p. 9-57) gives name, ethnic affiliation, area, population, of tribe. The maps (Alaska p. 638-39) show Athapaskan and Tlingit Indian, Eskimo and Aleut village groups in 1950 also original range. *Appendix (a)* gives data on Alaskan Indians (p. 650-55): population; land acreage under various types of ownership; agriculture, livestock, timber and other resources; employment; health and disease; housing, clothing, family income; education; tribal units. *Appendix C*, Alaskan native villages (p. 887-1033) lists principal Indian, Eskimo and Aleut tribes with representative villages; gives brief data on about 155 native villages; presents results of economic surveys of more than 60 villages. This is a basic reference work on Alaskan natives. **Copy seen: DLC.**

**26916. U. S. CONGRESS. HOUSE. COMMITTEE ON PUBLIC LANDS.** Protection of Dall sheep, caribou, etc., native to Mount McKinley National Park. Hearings before the Committee on the Public Lands, House of Representatives, Seventy-ninth Congress, second session, on H. R. 5004 and H. R. 5401, bills to provide for the protection of the Dall sheep, caribou, and other wildlife native to the Mount McKinley National Park area, and for other purposes. July 23, 1946 . . . Washington, U. S. Govt. Print. Off., 1946. ii, 55 p., 1 illus.

Statements, letters, and Dept. of Interior reports on bills to make mandatory the reduction of predatory animals (especially wolves) in the Mount McKinley National Park, the Departmental reports opposing the bill. The hearing includes statements of two viewpoints of wildlife conservationists: (1) Adolph Murie's, the park as a theatre for natural selection and biological balance, (2) the need to bring wolves close to extermination. **Copy seen: DLC.**

**26917. U. S. CONGRESS. HOUSE. COMMITTEE ON PUBLIC LANDS.** Providing for the admission of Alaska into the Union. Report to accompany H. R. 5666. [Washington, U. S. Govt. Print. Off., 1948] 18 p. (U. S. 80th Cong., 2d sess., 1948. House. Report no. 1731) Favorable report from the Committee to the House of Representatives, analyzing the bill and presenting data on Alaska's economic and social

conditions in support of the granting of statehood. **Copy seen: DLC.**

**26918. U. S. CONGRESS. HOUSE. COMMITTEE ON ROADS.** The Alaska Highway. An interim report from the Committee on Roads, House of Representatives, pursuant to H. Res. 255, authorizing the Committee on Roads, as a whole or by subcommittees, to investigate the federal road system, and for other purposes. . . . Washington, U. S. Govt. Print. Off., 1946. xiii, 323 p. incl. forms. tables (1 fold.) fold. maps, diagrs. (part fold.). (U. S. 79th Cong. 2d sess. House. Report. 1705)

Report based on an inspection in Aug. 1945 of the highway and its feeder roads, and on "a 4-month investigation of Federal agency records and other pertinent material", showing (1) why the Highway was constructed, (2) its cost, (3) manner in which funds were expended, and (4) the present and future value of the highway. Detailed information on location, condition, routes, construction, maintenance, bridge construction, costs, equipment, capacity, camp, medical and sanitation facilities, disposition of surplus facilities and future of the Highway.

*Appendices A-Q* present maps, charts, tables of mileage and economic statistics, lists of pertinent information (shipping and air traffic) and government reports. **Copy seen: DLC.**

**26919. U. S. CONGRESS. HOUSE. COMMITTEE ON ROADS.** Proposed highway to Alaska. Hearings before the Committee on Roads, House of Representatives, Seventy-seventh Congress, second session, on H. R. 3095, a bill authorizing the construction of a highway to Alaska. February 4, 5, and 6, 1942. Washington, U. S. Govt. Print. Off., 1942. iii, 131 p. incl. tables.

Statements from Alaskan and Canadian government officials and interested citizen groups on the need, and strategic military value of an international highway, later known as the Alaska Highway. The statements include data on type of road, methods and time needed for its construction. **Copy seen: DLC.**

**26920. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Alaska coal lands. Hearings before the Committee on the Territories, House of Representatives, on Alaska coal lands. . . . Washington, U. S. Govt. Print. Off., 1913. 7 v. in 1. (304 p.)

Statements of James Wickersham and seven others in connection with an amendment to the "act [passed in 1908] to encourage the development of coal deposits in the Territory of Alaska." Judge Wickersham spoke to facilitate the settling of coal claims in Alaska made prior to Nov. 1906. The hearings include considerable criticism of the Dept. of the Interior's handling of various sorts of land claims.

*Copy seen:* DLC.

**26921. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Alaska Northern Railroad. Hearing[s] before the Committee on the Territories, House of Representatives, on H. R. 27017 and H. R. 28731, extension of time for completion of the Alaska Northern Railroad . . . Washington, U. S. Govt. Print. Off., 1913. 2 v. (44 p.), tables.

Statements by the railroad's officials, U. S. government spokesman, and others on the extending and financing of this railroad in relation to the possibility of the Government itself developing railroads in Alaska, and taking over this line or part of it.

*Copy seen:* DLC.

**26922. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** The building of railroads in Alaska. Hearings before the Committee on the Territories, House of Representatives, Sixty-third Congress, first session, on bills H. R. 1739, H. R. 1806, and H. R. 2145 . . . Washington, U. S. Govt. Print. Off., 1913. 9 pt. (467 p.)

Testimony on "the feasibility and desirability of the Government building railroads in Alaska." Statements of several business men and the Congressional delegate from Alaska (James Wickersham). Includes data on resources and trade of Alaska; comment on their limited development, lack of transportation facilities, activities of various American firms in Alaska; views for and against private also government building and operation of railroads; extended remarks on financing, routes, costs, potential industrial use of railroad, also on the geography and social and economic conditions in Alaska.

*Copy seen:* DLC.

**26923. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Commission form of government in Alaska. Hearings before the Committee on the Territories, House of Representatives, Sixty-third Congress, second session, on H. R. 15763. Washington,

U. S. Govt. Print. Off., 1914. 2 pt. in 1 v. (95 p.)

*Contains* (in pt. 1) letters of Secretaries Lane, Redfield, Houston, McAdoo, and Comptroller of the Treasury Mr. Downey and statement of James Wickersham, June 3 and 5, 1914; in pt. 2, letter of the assistant secretary of war and statement of Albert Johnson, June 12, 1914. Secretary of the Interior Lane's letter is accompanied by a statement "showing the interlocking and overlapping of administrative functions in" Alaska at the time the bill was introduced; also practical difficulties arising from this situation as they affected the people settling in Alaska.

*Copy seen:* DLC.

**26924. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Construction of Alaska railroad. Hearings before the Committee on the Territories, House of Representatives, Sixty-sixth Congress, first session, on H. R. 7417, authorizing the appropriation of the sum of \$17,000,000 in addition to the sum of \$35,000,000 heretofore authorized and appropriated for the construction of a railroad in Alaska between Seward and Fairbanks, with necessary sidings, spurs, and lateral branches. July 23, 24, 25, and 31, 1919. Washington, U. S. Govt. Print. Off., 1919. 201 p., 3 fold. maps.

Need for a supplementary appropriation to complete the last third of the Alaska Railroad rose from increased costs of construction following World War I. Text of the original bill passed in 1914 and present bill (covering additional funds) are given; also (1) memoranda from the Secretary of Interior reporting on Government purchase of the former Alaska Northern Railway, high caliber of work and management to date: labor policy, engineering construction and cost; (2) estimates (in detail); reports on resources of tributary regions, need for the railroad, requirements for its completion, its potential traffic. The hearings include considerable information on conditions of work and industry in Alaska, with extensive quotations from newspapers and other periodicals in support of the bill.

*Copy seen:* DLC.

**26925. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Government for Alaska . . . Sixty-first Congress, second session. Washington, U. S. Govt. Print. Off., 1910. 3 v. in 1 (125 p.)

Statements of three residents of Alaska on bills to create a legislative council in the Territory of Alaska; discussing need for territorial government, the reliability of census figures, and conditions generally in Alaska.

*Copy seen:* DLC.

**26926. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Government for Alaska . . . Sixty-first Congress, second session. Washington, U. S. Govt. Print. Off., 1910. 4 v. in 1 (70 p.)

Statements of four Alaskan residents on the form and powers of the proposed Territorial legislature, particularly on whether it should be an elective or appointive body.

*Copy seen:* DLC.

**26927. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Hearings before the Committee on the Territories, House of Representatives, Seventy-ninth Congress, second session, pursuant to H. R. 4785, H. R. 6431 and H. R. 6486, bills to authorize an appropriation for the establishment of a Geophysical Institute at the University of Alaska. May 10 and 11, 1946. Washington, U. S. Govt. Print. Off., 1946. iv, 60 p.

Testimony of scientists of government agencies in Washington and Alaska on need for, and proposed scope of the Institute, with (p. 17) outline of subjects for study.

*Copy seen:* DLC.

**26928. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Hearings before the Committee on the Territories of the House of Representatives on conditions in Alaska . . . Washington, U. S. Govt. Print. Off., 1912. 7 v. (169 p.)

Statements of officials and residents of Alaska, Bishop P. T. Rowe, Governor Walter E. Clark, James Wickersham and others, concerning: the health and welfare of Eskimos and Indians; need of social services for native and white population, increased transportation facilities by water, roads and railroad, revision of laws relating to mining and public lands, development of coal lands, etc.

*Copy seen:* DLC.

**26929. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Hearings before the Committee on the Territories of the House of Representatives, on H. R. 38, to create a Legislative Assembly in the Territory of Alaska, to confer legislative powers thereon,

and for other purposes. Washington, U. S. Govt. Print. Off., 1911. 108 p.

Testimony of James Wickersham (then congressional delegate from Alaska) answering objections to the bill, describing, under question, the political, social and economic conditions in Alaska, and strongly urging passage of the bill.

*Copy seen:* DLC.

**26930. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Hearings before the Committee on the Territories of the House of Representatives on the bill H. R. 18526, to construct a railroad and telegraph line in the district of Alaska, and the bill H. R. 18533, to aid in the construction of a railroad and telegraph and telephone line in the Territory of Alaska. February 2, 6, and 9, 1905. Washington, U. S. Govt. Print. Off., 1905.

Statements and testimony by representatives of the company seeking federal aid (by this bill) for construction of railroad and telegraph; also testimony by others on natural resources of Alaska (particularly coal) which would immediately be served, with remarks on costs of transportation generally in Alaska.

*Copy seen:* DLC.

**26931. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Hearings before the Committee on Territories of the House of Representatives, on transportation in Alaska . . . Washington, U. S. Govt. Print. Off., 1912. 4 pt. in 1 (120 p.)

Contains statements accompanied by letters to the six spokesmen, in support of a railroad for Alaska. The testimony represents varying views of legislators, business men and organizations on government versus privately-owned railroads, on costs, routes, and the ever-present problem of need for self-government in Alaska.

*Copy seen:* DLC.

**26932. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.** Hearings before the Committee on the Territories of the House of Representatives, on transportation in Alaska. Statement of Mr. O. P. Hubbard, Valdez, Alaska. February 27, 1912. Washington, U. S. Govt. Print. Off., 1912. 20 p.

The spokesman for Valdez states the case for that town as the terminus of an Alaskan railroad and adds testimony on the need for a railroad in Alaska.

*Copy seen:* DLC.

**26933. U. S. CONGRESS. HOUSE. COMMITTEE ON THE TERRITORIES.**

To conduct a study and investigation of the various questions and problems relating to the Territory of Alaska. Hearings before the Committee on the Territories, House of Representatives, Seventy-ninth Congress, first session, pursuant to H. Res. 236, a resolution directing the Committee on the Territories to conduct a study and investigation of various questions and problems relating to the Territories of Alaska and Hawaii . . . Washington, U. S. Govt. Print. Off., 1946. v. 236 p., fold. map.

Testimony in hearings held at Ketchikan, Juneau, Anchorage, and Fairbanks, Aug. 4-17, 1945, representing views of various organizations labor unions, business men, also letters, newspaper articles, text of laws and regulations, brought before the committee in support of: (1) statehood for Alaska; (2) highway construction; (3) revision of certain restrictions in financing by municipalities; (4) election of the governor of Alaska; (5) change from the existing control by the Dept. of Interior, especially in regard to native rights; (6) regulation of various types of fisheries; (7) control of withdrawal of land into public domain; (8) changes in timber permits; (9) aid for public health and education, public power, and various individual or local problems. **Copy seen:** DLC.

**26934. U. S. CONGRESS. HOUSE. COMMITTEE ON WAYS AND MEANS.**

The Alaska Commercial Company . . . Report. [Washington, U. S. Govt. Print. Off., 1876]. 143 p. (U. S. 44th Cong., 1st sess. House Rept. 623)

Contains the Committee's report (p. 1-13) on an investigation into "the lease made between the United States and the Alaska Commercial Company, of the right to kill fur-seals on the islands of Saint George and Saint Paul in Alaska," under the following heads: (1) was the lease made in pursuance of law, (2) was it to the best advantage of the United States, (3) were the interests of the United States properly protected by stipulations of the lease, and (4) had the Alaska Commercial Co. complied with its terms and conditions, and with the provisions, regulations, and limitations of the act of Congress, July 1, 1870 (under which lease was let)? The Committee reported affirmative answers to all four questions, pointed out that the policy or impolicy

of the law, under which the lease was made, was outside their inquiry, and appended (p. 14-143) the testimony on which the report was based.

**Copy seen:** DLC.

**26935. U. S. CONGRESS. SENATE. COMMITTEE ON COMMERCE.** Alaska fur seals. Hearing before the Committee on Commerce, United States, Sixty-ninth Congress, first session, on S. 3679, a bill to amend an act entitled "An act to prevent the extermination of fur-bearing animals in Alaska," etc. June 10, 1926 . . . Washington, U. S. Govt. Print. Off., 1926. ii, 84 p. incl. tables.

Hearing on a bill for the measurement, setting of minimum size, the recording and marking of fur-seal skins on the Pribilof Islands. Testimony of H. W. Elliott in support of the bill with statistical data, documents, etc., showing current practices by lessees under government contract in taking seals and curing the skins; also report and statement from Secretary of Commerce relating to Elliott's testimony. Testimony on the original bill was heard before this congressional committee in 1922 and 1923, and published under the title: *Fur seals. Hearings . . . on S. 3731, 1923, q. v.* **Copy seen** DLC.

**26936. U. S. CONGRESS. SENATE. COMMITTEE ON COMMERCE.**

Alaska water transportation. Hearings before the Committee on Commerce, United States Senate, Sixty-sixth Congress, second session, relative to S. 4012, a bill to provide for the improvement of transportation by water to and from and within the Territory of Alaska, and for other purposes. March 25, 26, 27, 29, and 30, 1920. Printed for the use of the Committee on Commerce. Part I. Washington, U. S. Govt. Print. Off., 1920. 183 p., incl. tables. No more parts were issued.

Testimony by persons in disagreement with aspects of this bill which affected public carriers (of freight and passengers) to and from Alaska and on the inland waterways in respect to their rates, services, and extension of routes to remote areas. **Copy seen:** DLC.

**26937. U. S. CONGRESS. SENATE. COMMITTEE ON COMMERCE.**

Arctic weather reporting stations. Report. <To accompany S. 765> [Washington, U. S. Govt. Print. Off., 1945] 5 p. (U. S. 79th Cong., 1st sess. Senate. Report 656)

Favorable report (without text of bill or amendments) containing a brief discussion of need and value of such stations to meteorology, air travel and national security.

**Copy seen:** DLC.

**26938. U. S. CONGRESS. SENATE. COMMITTEE ON COMMERCE.** Fur seals. Hearings before the Committee on Commerce, United States Senate, Sixty-seventh Congress, second and fourth sessions, on S. 3731, a bill to prevent the extermination of fur-bearing animals in Alaska. Washington, U. S. Govt. Print. Off., 1923. 204 p.

Testimony of Henry W. Elliott with statistical data and supporting documents to show that the taking of fur seals on Pribilof Islands by lessees of the U. S. Government, and the sale of skins to one house (Fouke Fur Co., of St. Louis, Mo.) was being carried on to the Government's disadvantage. Includes considerable information on the method of taking the seals, processing the skins, sizes, ages, etc., of the seals, and prices.

**Copy seen:** DLC.

**26939. U. S. CONGRESS. SENATE. COMMITTEE ON INTERIOR AND INSULAR AFFAIRS.** Alaska Indian reservations. Hearing before the Committee on Interior and Insular Affairs, United States Senate, Eighty-first Congress, second session, on orders of Secretary Julius A. Krug creating certain Indian reservations in Alaska. Feb. 2, 1950. Washington, U. S. Govt. Print. Off., 1950. iii, 50 p.

Statements of Governor Gruening and Alaskan Delegate to Congress E. L. Bartlett, with related documents, etc., on social, economic and political discrimination suffered by Eskimo and Indian natives in Alaska; testimony to show how proposed reservations will reinforce discriminatory practices; also how hunting and other aboriginal rights may be safeguarded without disadvantages of reservations.

**26940. U. S. CONGRESS. SENATE. COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE.** Alaskan shipping. Hearings before a subcommittee

of the Committee on Interstate and Foreign Commerce, United States Senate, Eightieth Congress, second session on S. 1834 . . . [and others] Apr. 14, 15, and June 7, 1948. Washington, U. S. Govt. Print. Off., 1948. iv, 259 p.

Hearings on Senate bills 1834 and 2092 and Senate joint resolutions, 218, 219 and 222, providing for certain ocean transportation services, to, from, and within Alaska. Testimony (of 18 witnesses, including the Governor and Congressional Delegate of Alaska, representatives of Government and transportation companies), deals with the inadequacy of shipping service between the U. S. and Alaska as operated by a small group of associated companies; high shipping rates; advantages and disadvantages of admitting Canadian shipping companies to this trade; hardships to residents of Alaska resultant from shipping legislation in force.

An article *Monopoly at Alaska's throat* by Richard L. Neuberger is reprinted (on p. 63-65) from *The Nation*, Mar. 13, 1948, v. 166, p. 300-301.

**26947. U. S. DEPT. OF THE INTERIOR. PRIBILOF ISLANDS SURVEY GROUP.** Pribilof Island survey reports. Observations and recommendations. Washington, 1949. 13, 5, 3 numb. 1. mimeographed.

Report (13 l.) of a group (M. A. Dawber, L. T. Oldroyd, J. R. Nichols, and A. E. Day) designated by the Secretary of the Interior to make a factual study of the living conditions and human problems of the natives of the Pribilof Islands. The study was conducted on St. Paul Island, Oct. 2-9, 1949. Authors note that 80 per cent of the world's fur seals summer on these islands, and that the U. S. Government manages the herds. They quote and discuss sections of the Fur Seal Act of Feb. 26, 1944, which deal with U. S. Government responsibility to the natives; state their findings in regard to income, physical condition, schools, medical facilities, and housing. They find conditions of Pribilof Island natives on a par with those of the best native communities in Alaska and criticism of U. S. Fish and Wildlife Service administration there unwarranted. They summarize the poor housing, health and economic conditions

of other settlements in the Bering Sea area, make recommendations for future improvement of conditions in these low-standard communities as well as specific suggestions for Pribilof Islands welfare.

*Appended* (5 l.) is a "Personal report of L. T. Oldroyd and M. A. Dawber" non-government members of the group, answering criticism of the Islands' administration which had made the survey necessary. They deal with alleged restrictions on natives' freedom of living, lack of native voice in local government, denial of natives to engage in private enterprise, poor food, severity of punishment, insufficient sanitary and educational facilities, etc.; and find criticisms in the main unwarranted, recommend larger appropriation and undivided administration. At end (3 l.) is "Special report on dairy herd," by Lorin T. Oldroyd, q. v.

The Survey Group's reports are reviewed in F. Martin's *Three Years of Pribilof progress*, 1950, q. v.

**U. S. LIBRARY OF CONGRESS. LEGISLATIVE REFERENCE SERVICE.** *see* U. S. Congress. House. Committee on Lands. Compilation Indians of U. S. & Alaska. 1950. No. 26915.

**26959. U. S. LIBRARY OF CONGRESS. REFERENCE DEPARTMENT.** Soviet geography, a bibliography. Washington, D. C., 1951. 2 pt. xii, xx, 668 p. numbered continuously.

*Contains* 4,421 entries in a broad subject (part 1) and regional (pt. 2) arrangement, with author and specific subject indexes appended. The first part includes such subjects as geographical science; explorations; historical, physical, economic, political and military geography; cartography; bibliography, etc. Pt. 2 contains literature on the administrative, natural and economic regions including the Northern European section (p. 361-78), Urals, Siberia, the Far East, etc.

This bibliography, it is stated, "does not delve deeply into publications pertaining to the Arctic regions, geology, atlases and maps . . . [nor] into the anthropogeography . . . except for a few representative titles." Nevertheless, it provides through its index (Alaska, Aldan, Apatite, Arctic, Barents, Bering, etc.) a useful entree to a considerable literature on the North. For each item, a holding library is indicated, and in the case of the Library of Congress, a call number is given.

**26960. U. S. LIBRARY OF CONGRESS. TECHNICAL INFORMATION DIVISION.** Annotated bibliography on snow, ice, and permafrost. Washington, D. C., 1951-1952. 2 v.: v, 226; 356 p. (SIPRE report no. 12, v. 1 (Sept. 15, 1951) - 2 (July, 1952))

*Contains* in v. 1, introductory outline of scope and organization of the project, followed by 780 abstracts prepared by

the Library of Congress, 318 abstracts and 580 references assembled by Purdue University, and 78 abstracts prepared by the University of Minnesota. Author and subject indexes accompany the Library of Congress abstracts. The Purdue and Minnesota materials are arranged in alphabetic order by author. Vol. 2 consists of 1620 abstracts prepared by Library of Congress personnel. The abstracts are arranged in numerical order and are supplemented by an author and a subject index. The second volume deals chiefly with construction in permafrost areas and frost action in soils.

These are the first two volumes of a bibliography planned to be issued semi-annually. The abstracts are likewise published weekly on 5 x 3 cards for authorized users. The work is carried out under contract with U. S. Army Engineers, Snow, Ice and Permafrost Research Establishment, and is directed by John Sherrod, formerly by Donald G. Yerg.

Contains a concise report on research projects planned or under way in applied and basic sciences. These were initiated in 1948 with the establishment of a field research station, which in 1950 was designated as the Arctic Health Research Center. The report covers the branches of: animal-borne diseases; entomology and insect control; environmental sanitation; biochemistry and nutrition; physiology, bacteriology and parasitology; biometrics; library and administration. For each branch, the personnel is listed, program and projects under way are summarized; for the library and administrative branch, organization and activities are outlined. Some general information on Alaska's health problems, mortality data, housing, incidence of illness, etc., is presented in the introductory chapter. An appendix contains a list of publications of the staff (about 60 items).

See also *Arctic Bibliography*, No. 154 and No. 18398 for previous reports in this field.

The study was undertaken to obtain information on the responses to localized frostbite and the role of histamine in its pathogenesis. Experimentally produced frostbite lesions were studied before and after histamine-antagonists were introduced locally by an electric current. The iontophoretic introduction of these substances (Pyribenzamine hydrochloride and Benadryl hydrochloride) inhibited the formation of wheals in human skin. No other effects on the type of progress of localized frostbite lesions were observed. It is concluded that histamine or a histamine-like substance is liberated in the human skin in the early stages of frostbite. Bibliography (7 items).

**26973. U. S. TREATIES.** The defence of Greenland. (Polar record, Jan. 1952. v. 6, no. 43, p. 408-412)

Contains editor's statement on agreement of Apr. 9, 1941 (see *Arctic Bibliography*, No. 18407), and, following formation of North Atlantic Treaty Organization (NATO), the new agreement between Denmark and the U. S. signed Copenhagen, Apr. 27, 1951. Then follows:

Agreement between the Government of the United States of America and the Government of the Kingdom of Denmark pursuant to the North Atlantic Treaty, concerning the defence of Greenland.

Taken from: Forslag til rigsdagsbeslutning i anledning af den i København den 27. april 1951 undertegnede overenskomst i henhold til Den nordatlantiske Traktat mellem Regeringerne i Danmark og Amerikas Forende Stater om forsvaret af Grønland, [pub.] J. H. Schultz A/S København, 1951. Text in 14 articles gives U. S. Armed Forces right of access to Greenland and specifies activities, services, etc., mutually to be undertaken there by the two countries. Includes articles on status of Grønland, on NATO.

**26995. USHAKOV, G. A.** Po nekhozhenoi zemle. Predislovie V. A. Obrucheva. Moskva, Izd-vo Glavsevmorputi, 1951.

400 p. illus., sketch map **Title tr.:** On untrodden land. Introduction by V. A. Obruchev.

Contains a detailed (though somewhat popularized and anecdotal) narrative, with some diary entries, of the exploratory expedition to Severnaya Zemlya in 1930-32, headed by the author. Following a sketch of the discovery of these islands (in 1913, by the ice-breakers *Taimyr* and *Vaigach*) and of explorations preceding the present one, the author outlines the plan and preparations for his expedition, a four-man survey party transported on the ice-breaker *Sedov's* 1930 trip, to winter there, explore and do mapping. He describes various physical features of the islands and coasts; climate in general and during summer and winter; animal life (and hunting) especially during summer: birds, polar bears; the party's dogs; wintering in the area; auroras; exploration trips into the interior, and around the islands (Bol'shevik, Oktâbr'skoï Revoliûtsii, Pioneer, Komsomolets and smaller islands); first traverse of Oktâbr'skoï Revoliûtsii Island. Exploration during spring and summer; mapping; discovery of the Shokal'skiy Sound; belugas and their hunting; exploration of Bol'shevik Island; etc. The narrative is extensively illustrated with drawings and photographs; a small sketch map (p. 392) shows roughly the party's track. For other papers from this expedition see *Arctic Bibliography*, No. 18427, 18433, 18443.

Contains an account of a group of hot springs, discovered and named by the authors in 1946. It is one of seven groups located 300 km. north of Petropavlovsk. The neighboring volcanoes and fumaroles are described; the springs discussed with data given on their temperature, physical characteristics, chemical composition, etc. *Bibliography* (3 items).

**Copy seen:** DLC.

**27005. UTSI, MIKEL.** The reindeer-breeding methods of the northern Lapps. (Man, 1948. v. 48, p. 97-101, 2 text illus., 3 illus. on a plate, map)

Reindeer-breeding is still the center of the northern Lapp mode of life. Its chief factors are the type of area, particularly as to the pasture it offers, and the weather, especially its effect on ice-snow. The third factor is the prevailing price for meat and hides. The author, a native of Karesuando (Sweden), describes a Lapp reindeer-herder's life and work throughout the year, and the so-called "method of extensive summer herding." Since 1890 the Kautokeino and Karasjok Lapps have been teaching Eskimos and Americans how to breed and herd reindeer in Alaska. During 1929-34 five northern Lapps drove successfully a nucleus herd from the Kotzebue Sound region of Alaska to the Mackenzie delta in northern Canada, to develop reindeer husbandry among Canadian Eskimos.

**27007. VADILO, P. S.** Methods for the investigation of the structure of ice. (Akademiia nauk SSSR. Comptes rendus (Doklady), 1939. nouv. ser., v. 23, no. 4, p. 343-44)

"The structure of ice may be studied by means of X-rays, a polarization microscope, or through carbon paper tracings of ice patterns. A method is devised which eliminates the disadvantages of the 3 existing techniques. River ice is exposed to damp air at a temperature slightly above 0° C. The temperature is then lowered to a few degrees above 0° C. Ice crystals, orientated to the crystal axes of the river ice sample, were formed by sublimation. The boundaries between the crystals of river ice and the crystals formed by sublimation could be identified because of the orientation. Another method of analysis consists of placing paper or a thin textile over ice, and making rubbings with a soft lead pencil. The boundaries between separate crystals become apparent."—SIPRE.

**27009. VÄISÄNEN, A. O.** Die Leier der Ob-Ugrischen Völker; ihr Bau, Gebrauch und Ursprung. (Eurasia Septentrionalis antiqua, 1931. v. 6, p. 15-29, 12 illus.) **Title tr.:** The lyre of the Ob-Ugrian peoples; its construction, use and origin.

Contains description of an Ob-Ugrian five-stringed instrument (Ostyak: *nares-juz* "musical wood"), how it is made

and played, on what occasions (as an accompaniment for the dance and epic songs, at dramatic performances during bear festivals, at burials and shamanistic performances). It is not Finno-Ugrie in origin; it probably has some relationship to the Hittite cultural cycle of Asia Minor and came to the North via the Caucasus. This paper is based on museum material of the National Museum in Helsinki (which has six lyres, several others are found elsewhere). The author makes frequent and controversial reference to other writers on this subject, Seraphim Atkanov, Tobias Norlind, and Otto Anderson.

**Copy seen:** DLC.

**27010. VÄISÄNEN, A. O.** Die obugrische Harfe. (Finnisch-ugrische Forschungen, 1937. Bd. 24, p. 127-52, 26 illus.) **Title tr.:** The Ob-Ugrian harp.

Among the Ostyaks and Voguls, two kinds of musical stringed instruments are very popular: a lyre which is older (investigated in the author's *Die Leier der Ob-Ugrischen Völker*, 1931, q. v.) and a harp. The Samoyeds adopted both instruments (excepting the name) from the Ostyaks, other Ob-Ugrian neighbours lacking such instruments. The Ob-Ugrian names for harp are indigenous and mean a "crane," or "swan," or "piece of wood with a crane's head (neck)." The Samoyeds call both the lyre and the harp by the name for "drum." Detailed description and measurements are given of harps preserved in the Finnish National Museum. The harp was used for accompaniment of heroic and sacrificial songs, and more frequently played for dances. The origin of this kind of harp probably was in the eastern Turkestan.

Account of previous work in the area, and of a collecting trip made for the University of Helsinki Zoological Museum in the summer of 1933. Field notes are given on the common animals found along the shores of different types and

at various depths; also common free-floating (planktonic) animals of the open sea. **Copy seen:** DLC.

**27012. VÄLIKANGAS, ILMARI. J. A.** Palmén's theories on migratory routes of birds in the light of later, especially Finnish, observations and results of ring-marking. Helsingfors, 1946. 34 p., 15 sketch maps. (Finska vetenskaps-societeten. Årsbok-Vuosikirja, 24:2)

**Contains** a centenary tribute to Johan Axel Palmén, 1845-1919, particularly to his fundamental work on bird migration *Über die Zugstrassen der Vögel* (Leipzig, 1876, 292 p., copy at MH). Author discusses "results of the ringmarkings in Finland started by Palmén himself," presenting further data on Palmén's "19 arctic species," waterfowl and shore birds which were found to breed in the archipelago north of the Eurasia or no further south than the northernmost parts of the continent. Author remarks on Palmén's theories developed from his researches on these "extreme-arctic" migratory birds and traces the controversial (and other) literature which followed the 1876 publication; also notes on which of these arctic species later experience has corroborated Palmén's theories. He discusses also (on the basis of observational data of recent decades), palaearctic water- and shore-bird fauna which Palmén treated mainly on a theoretical basis. Migration routes and recoveries are figured on the sketch maps. Bibliography (24 items). **Copy seen:** DLC.

**27013. VÄYRYNEN, HEIKKI ALLAN, 1888- .** Über die geologische Struktur des Erzfeldes Kammikivittunturi in Petsamo. (Finland. Geologiska kommission. Bulletin, 1930. no. 92, p. 19-32, fold. map, diagrs.) **Title tr.:** On the geological structure of the ore field Kammikivittunturi in Petsamo.

**Report** on a detailed examination of the field: the stratigraphy of the various formations; outline of the tectonics, and account on the occurrence and genesis of the sulphide ores of the area.

**Copy seen:** DLC.

**27014. VAINIO, ILMARI.** Zur Verbreitung und Biologie der Kreuzotter, *Vipera berus* (L.) in Finnland. (Suomalainen eläin- ja kasvieteellisen seuran Vanamo. Julkaisuja, 12:1, p. 1-19, map) **Title tr.:** The occurrence and

biology of the adder *Vipera berus* (L.) in Finland.

**Author** deals with this common adder's distribution (throughout Finland, its northern limit above the Arctic Circle in Finnish Lapland), color and size, habitats, food and reproduction.

**Copy seen:** DLC.

**27015. VÄINSHTEIN, S. I.** K voprosu ob étnogeneze ketov. (Akademiia nauk SSSR. Institut étnografii. Kratkie soobshcheniia, 1951. v. 13, p. 3-7, illus.)

**Title tr.:** On the problem of the ethnogenesis of the Kets.

**Contains** notes on a study made in a group of Kets (Yeniseians) on the Middle or Stony (Podkamennaya) Tunguska. On the basis of their folklore, some articles of dress, language and archeological evidence, the author postulates a southern origin of the Kets, possibly in the area now Tibet. **Copy seen:** DLC.

**27016. VÄINSHTEIN, S. I.** Kul'tura i byt ketskogo kolkhoza imeni Stalina. (Akademiia nauk SSSR. Institut étnografii. Kratkie soobshcheniia, 1950. t. 11, p. 60-69, 7 illus., map) **Title tr.:** Culture and life of a Ket kolkhoz named Stalin.

**Contains** description of a kolkhoz organized in 1934 and centered on Chernyi Ostrov in the Podkamennaya Tunguska River in Krasnoyarskiy Krai. Most of the Yeniseians, living in the Yenisey basin (see map) belong to the kolkhoz (which is 82 percent Yeniseian, 9 per cent Russian and 9 per cent Zyryan). The chief occupation is hunting and fishing, done in brigades of three to five persons and individually; attempts are made to plant vegetables (potatoes, cabbage and carrots), and to keep cows; small cabins are erected in the woods as shelter for hunters and equipped with supplies. The way of life has changed: the Russian clothes have been adopted, stable log cabins have replaced tents; there is a school, hospital, and a club with radio set, movies and newspapers (all young people can read and write); the shamans and diviners have become extinct, etc. Numbers of persons or families belonging to the kolkhoz, or earnings of a hunter or fisher are not indicated. The hunting animals are reindeer, elk, bear, and sable, also birds. The cultural institutions are accessible to only a few of the people because of the great distances.

(Suomen hyönteistieteellinen aikakauskirja, 1951. v. 17, no. 1, p. 22-25) **Title tr.:** Trichoptera collected from Petsamo and other parts of Lapland in the summers of 1928-1930.

Contains notes on previous investigations in this region followed by a simple list of 56 species of trichopters collected there by the author, of which 21 are new for the Petsamo region and five new for all Lapland. Bibliography (10 items).

**Copy seen:** DLC.

**27026. VALLE, KAARLO JOHANNES, 1887-** . Über die Odonatenfauna des nördlichen Finnland mit besonderer Berücksichtigung des Petsamogebiets. Zur Kenntnis der Odonatenfauna Finnlands IV. (Suomalainen eläin- ja kasvitieteellinen seura Vanamo. Julkaisuja, 1932. v. 12, no. 2, p. 21-46, maps, diagrs.) **Title tr.:** On the Odonata-fauna of

northern Finland with particular consideration of the Petsamo area. A contribution to the Odonata fauna of Finland IV.

Author lists 21 species of dragonflies from this area with their distribution, new localities and frequency. Bibliography (21 items). For the preceding papers (I-III) in this group see *Arctic Bibliography*, No. 18513-18515.

**Copy seen:** DLC.

**27027. VALLE, KAARLO JOHANNES, 1887-** . Die Verbreitungsverhältnisse der ostfennoskandischen Odonaten. Zur Kenntnis der Odonaten-fauna Finnlands VI. Helsinki, Sanoma Oy., 1952. 87 p. sketch maps 1-50. (Acta entomologica fennica, 1952. no. 10) **Title tr.:** Distributional relations of Odonata in eastern Fennoscandia. Contribution to the knowledge of Odonata fauna of Finland VI.

Contains data on geographic distribution of 50 species of dragonflies, inhabiting eastern Fennoscandia (p. 10-54) with lists of localities and sketch map for each species. Distributional groups are shown and a comparison made of Scandinavian and total distribution of Scandinavian species (p. 55-62). Factors influencing the distribution are discussed: general, topographical, edaphic, hydrographic, etc. (p. 62-72) and a bibliography (165 items) appended. Data on distribution in Finnish and Russian Lapland are included. Summary in Finnish.

**27042. VAN STOCKUM, RONALD R.** Big Delta: survival at 50° below. (Marine Corps gazette, Dec. 1951. v. 35, no. 12, p. 42-50, incl. illus., diagr.)

"Information on equipment and procedures for survival in low temperatures is given, based on experiences at the Officers' Winter Indoctrination Course at Big Delta, in the Tanana valley region of Alaska. The arctic tent, a pyramidal 5-man double-walled tent, heated by a Yukon stove, provides satisfactory shelter. The M29C (Weasel) is an ideal over-snow vehicle that can pull 8-10 skiers at up to 30 mph. Effective cross-country movement is possible only if personnel are equipped with skis and snowshoes. The trail snowshoe is better suited to long marches; the bear-paw snowshoe is more suitable for working around equipment."—SIPRE.

*Contains* account of an expedition to the Tungus in 1947-48, organized by the Institute of Ethnography and the Yakut Institute for Scientific Research in Language, Literature and History. Its purpose was to study the ethnography and language of Tungus living around Dzhugdyr (58° N. 138° E.) southeast of the Aldan River. The party visited all the kolkhozes in the Timptonsk district and a few in the districts of Chitinsk and Uchursk, traveling 2,300 km. by automobile, horse and reindeer. Material was collected on mode of living in former and present times (hunting and reindeer breeding), customs from birth to death, family relations, shamanistic beliefs, folk art, folklore, etc. Cultural relations with Yakuts, the present situation in use of languages, life in kolkhozes etc., are also noted. **Copy seen:** DSI-M.

**27062. VASILEVICH, GLAFIRA MAKAR'EVNA 1895-** . Ĭazykovye dannye po terminu *zél~kél*. (Akademiâ nauk SSSR. Muzei antropologii i étnografii. Sbornik, 1949. t. 11, p. 154-56) **Title tr.:** The linguistic facts about the term *zél~kél*.

*Contains* data and discussion on how the mammoth and its tusks are called in the languages of the Tungus, Tawgis-Samoyeds, Yeniseians, Yukaghirs, Zyr-yans and others. **Copy seen:** DLC.

**27063. VASILEVICH, GLAFIRA MAKAR'EVNA, 1895-** . Korytoobraznââ

narta synskikh évenkov. (Akademiâ nauk SSSR. Muzei antropologii i étnografii. Sbornik, 1949. t. 10, p. 93-97, 5 illus.) **Title tr.:** The trough-shaped sledge of the Évenki from Sym.

*Contains* short description of a light toboggan shaped like a flat-bottomed boat, and made of pine bark, to be drawn by man, or man and dog. It is used mostly by hunters on their trips through the forest. The harness for dog (also man) is shown. **Copy seen:** DLC.

**27064. VASILEVICH, GLAFIRA MAKAR'EVNA, 1895-** . Po kolkhozam dzhugdyrskikh évenkov. (Vsesoûznoe geograficheskoe obshchestvo. Izvestiâ, 1950. t. 82, no. 2, p. 163-73) **Title tr.:** In the collective farms of the Dzhugdyr Évenki.

A detailed itinerary of a journey made in 1948-49 to the Tungus living between the Aldan and Gilyuy Rivers (55°-60° N.) on the west, and the Okhotsk Sea on the east. A few data are given on the origin and occupations of these Tungus and on the character of their farms. **Copy seen:** DLC.

**27065. VASILEVICH, GLAFIRA MAKAR'EVNA, 1895-** . Russko-évenkiiskii (russko-tungusskii) slovar', okolo 20.000 slov. Moskva, Gosudarstvennoe izd-vo inostrannykh i natsional'nykh slovar'ei, 1948. 331 p., illus. **Title tr.:** Russian-Évenki (Russian-Tungus) dictionary, of approximately 20,000 words. **Copy seen:** DLC.

**27066. VASILEVICH, GLAFIRA MAKAR'EVNA, 1895-** . and M. G. LEVIN. Tipy olenevodstva i ikh proiskhozhdenie. (Sovetskââ étnografiâ, 1951, no. 1, p. 63-87, 12 illus.) **Title tr.:** Types of reindeer husbandry and their origin.

*Contains* discussion of reindeer chiefly as a transport animal. Types of sledges and their seats, harness, saddles and hitches are described and figured. Several types of harnessing are treated in detail: (1) Chukchi-Koryak, (2) Tungus-Yakut, (3) Samoyedic, (4) Lappish, and (5) Orobian. The authors favor the hypothesis that reindeer-breeding originated in the Sayan Mountains region. They think also that horse-breeding led to the idea of domesticating the reindeer and using it as a draft animal. **Copy seen:** DLC.

nik u narodov Sibiri. (Akademiâ nauk SSSR. Muzei antropologii i étnografii. Sbornik, 1949. t. 11, p. 42-61, 30 illus., col. plate) **Title tr.:** The Tungusian breastplate among the Siberian peoples.

Contains account of Tungus national costume with special attention to the breastplate which was adopted by many other Siberian peoples: Yakuts, Dolgans, Yukaghirs, Yeniseians, and Samoyeds.

**Copy seen:** DLC.

**27068. VAS'KOVSKIÏ, A. P.** Dlinnopalyi kulik-vorobel' v al'piskoi zone Okhotsko-Kolym'skogo vodorazdela. (Priroda, 1949. No. 1, p. 83) **Title tr.:** *Limonites subminuta* in the alpine zone of the Okhotsk-Kolyma watershed.

Contains a report of the find on the watershed between Kolyma River and Okhotsk, of two nests of *Limonites subminuta*, a bird previously known from Kurile and Commander Islands.

**Copy seen:** DLC; MH.

**27069. VASSY, A., and É. VASSY.** Recherches sur l'ozone atmosphérique et la température de la stratosphère en Laponie Suédoise. (Tellus, May 1950. v. 2, no. 2, p. 69-73, 3 figs.) **Title tr.:** Investigation of atmospheric ozone and the temperature of the stratosphere in Swedish Lapland.

"Measurements of ozone in the stratosphere were made by Barbier, Vassy and others at Abisko in Swedish Lapland from Dec. 1934 to March 1935 and during the summer of 1949 by the authors. Other studies made in the Northern Hemisphere are compared with those made in Lapland. An annual mean temperature variation of 100° C. is shown for the ozone layer at Abisko, due to the extreme annual variation in duration of insolation. The amount of ozone at various levels and seasons is discussed. Further studies and measurements necessary to answer questions as to origin of ozone."—*Meteorological abstracts and bibliography*, Nov. 1950. v. 1, no. 11, p. 708. Bibliography (17 items) and English summary are included.

**27074. VEDERMAN, JOSEPH, and C. D. SMITH.** The winter mid-troposphere circulation near the North Pole. (American Meteorological Society. Bulletin, June 1950. v. 31, p. 197-205, illus.)

"Analysis of 750 observations made at ½ hourly intervals on 40 flights, of which 31 reached the North Pole, give data for construction of the first accurate charts of mean height of the 500 mb. surface over the Arctic Ocean between Point Barrow and the Pole. Extreme variations (2,810 ft.) are noted in height of the isobaric surface, but not so much range in temperature (19° C.) compared with Ely, Nevada (1,630 ft. and 27° C. respectively). Heights and temperatures are lower than at Barrow, but the gradient is less than over the continent, and even lower temperatures are found at Eureka Sound, Canada, than at the Pole. Winds are weak and predominantly westerly. Individual flights are analyzed and illustrated by cross sections and synoptic charts; and the whole is tied in with theories of the general circulation and the best existing models of pressure over the Arctic."—*Meteorological abstracts and bibliography*, Aug. 1950, no. 8, p. 495.

**27078. VEINBERG, K. B.** K voprosu o primerzanii sanei. (Problemy arktiki, 1938. no. 4, p. 151-55, incl. tables) *Title tr.:* On the problem of sled adfreezing.

"A study was made to determine the force necessary to move sleds which have been stationary for a determined interval at temperatures below 0° C. Sleds were equipped with either 2 or 3 runners and the force required was determined with dynamometer. Data show that the temperature changes have the least effect on the force necessary to overcome inertia. The motivating force was dependent on the sled load and the time the sleds remained stationary. The force to move the sleds after 2 to 3 min. of rest was 2 to 4 times as great as that necessary to keep the sleds in motion. The force was about 12 times as great after 1 to 1.5 hours of rest. It is suggested that the sled be rocked prior to pulling to break up the adhesion between the snow and

the sleds."—SIPRE. Previously listed in *Arctic Bibliography*, No. 18646.

**27090. VESELKIN, P. N.** O vosstanovlenii serdechnoi deiatel'nosti i dykhanii u krolikov posle "klinicheskoi smerti" ot okhlazhdeniia. (Bülleten' éksperimental'noi biologii i meditsiny, 1943. t. 15, vyp. 1-2, p. 58-60) **Title tr.:** On restoration of cardiac activity and respiration in rabbits following "clinical death" by cooling.

Contains a study on rabbits made hypothermic by application of ice. Respiration, blood pressure, rectal temperature and heart-beat are recorded at various stages of hypothermia and the condition of the heart followed after the "clinical death." Respiration and heart-beat could be reestablished 20-30 minutes after "clinical death" by a combination of artificial respiration, heart massage, intra-arterial administration of glucose with adrenalin and quick rewarming. It is noteworthy that it was possible to reestablish heart-beat at body temperature lower than that at which heart-beating ceased. All rabbits were dead the next day.

**Title tr.:** Air-temperature measurement results over clay soil, farmed moorland, and drained and undrained wet sphagnum fuscum-pine-peat-bog.

Contains an introduction to the field; data on temperature observations above and on the surface of clay soil and farmed moorland during the years 1925-38 (these statistics are contrasted in various ways showing that clay and the air over clay is warmer); air measurements over drained and undrained peat bog and clay and farmed swampland during 1936-39; temperature measurements in relation to the depth of the ground water in drained and undrained peat bog; depth of frost and speed of melting of ice, 1937-39. The studies support in general the theory that the draining of swamps raises the temperature of the area and that clay is warmer, freezes later and thaws sooner. Bibliography (5 items). Summary in German.

**27097. VIBE, CHRISTIAN, 1913-** The marine mammals and the marine fauna in the Thule District (Northwest Greenland) with observations on ice conditions in 1939-41. København, C. A. Reitzel, 1950. 115 p., illus. (incl. 6 maps, tables, diags.), 2 plates (1 fold.). (Meddelelser om Grønland. Bd. 150, nr. 6)

Results of the Danish Thule and Ellesmere Land Expedition 1939-41; leader, James van Hauen. This five-man expedition used Nege on Murchison Sound as a base and made sledge journeys to Inglefield and Washington Lands in northwest Greenland and to Ellesmere and Axel Heiberg Islands. Introductory remarks include description (in some detail and with map) of ice conditions from Cape York to Hall Basin during the two winters 1939-40, 1940-41; the iceberg grounds, open water due to currents, and influence of ice on marine fauna. Full description and discussion follows of the distribution, migration, food, wintering, breeding conditions, hunting, and economic importance to the Polar Eskimo, of the walrus, the seals and the narwhal. Survey of distribution is given of the most important food elements for these mammals, the littoral fauna of the Thule region, and the marine animal life west of Ellesmere Island. Trichinosis in arctic mammals is discussed, its incidence and sources of infection; two subtropical crustaceans found north of Thule are noted; and a list offered of nearly two hundred marine invertebrate species collected during the expedition.

**Title tr.:** On the frost hazard to railroads and measures for preventing damage to the road bed.

**Contains** data on frost heave; its effect on railroads; measures (in detail) to reduce damage: by raising of the embankment and using coarse-grained gravel; by improved (open and sub-) drainage; by introducing insulating materials in conjunction with replacement of frost-susceptible soils.

**Copy seen:** DLC.

**27114. VILUKSELA, M.** Viimeaikaisista toimenpiteistä routimishaittojen vähentämiseksi. (Teknillinen aikakauslehti, Feb. 1940, v. 30, p. 22-25, incl. tables, graphs) **Title tr.:** Recent actions to reduce the frost damages to railroads.

"The swelling of frozen ground causes uneven and dangerous rising of the railroad tracks in the wintertime. Attempts to combat frost action effects consisted of replacing frost-susceptible soils with coarse-grained gravels, supplying ample drainage, and leveling the tracks by placing temporary wooden wedges between the rails and the cross-ties. These measures were ineffective in Finland. The newer methods of control consist of increasing the depth of ballasting to 80 cm. and extending the drainage operations to lower the level of the ground water near the railroad tracks. Sub-drainage is feasible when the size of

the soil grain is 0.06 mm and the velocity of the water ranges from 0.3 m/sec. to 1.0 m/sec. Recommendations for amount of ballasting and depths of drainage pipes are given."—SIPRE. **Coppy seen:** DLC.

**Title tr.:** The new Turukhansk oil-bearing region.

Summarizing the geomorphological,

stratigraphic and mineralogical indications of probable oil-bearing substrata in the Turukhansk region, the author, who prospected in 1938, urges a start in exploratory well-drilling in certain localities along the banks of Nizhnyaya Tunguska and Sukhaya Tunguska Rivers.

**Title tr.:** On the Cambrian of the Urals.

Contains a study of Cambrian deposits which includes the Northern Ural, prepared 50 years after A. P. Karpinski's classic work *Ocherk fiziko-geograficheskikh uslovii Ev. Rossii*, 1887, q. v., Data obtained since 1931 are summarized and recent data correlated; the author compares the Cambrian deposits of Northern Ural with those of Novaya Zemlya and Vaygach. In view of the peculiar lithological composition of the Cambrian in different parts of the Uralian folded zone, author thinks that its arctic and southern parts had common development with the Salaiskiy Kryazh in Western Siberia, and that the Middle and (partly) Northern Urals are similar to the Cambrian of the Siberian Platform. Summary in English.

*Contains* a study (completed in 1946) describing the life of the Lapps in the districts south of Varanger Fjord, most easterly of the big fiords in Finnmark (northern Norway). The topography of the land is described, as well as the vegetation. The reindeer and their care receives detailed treatment, also the migrations of the herds from the summer pastures on Varanger Peninsula to the winter pastures inland. Reindeer driving

is discussed, and equipment shown in photographs and drawings. Tents and camping places, food, household utensils, and clothing are all treated in text and numerous illustrations. A final chapter is devoted to the history of the development of the reindeer industry in the southern Varanger districts. Summary in English (16 p.). **Copy seen:** DLC.

**27196. VYSHINSKIĬ, ANDREĬ IĀNUAR'EVICH, 1883-** . Sudebnye rechi. Iŭridicheskoe izd-vo Ministerstva ūstitsiī SSSR. Moskva, 1949. 538 p. **Title tr.:** Court speeches.

Includes (p. 225-90) Delo byvshego nachal'nika zimovki na ostrove Vrangeliā Semenchuka i kaŭra Starŭseva. (The

case of Semenchuk, former head of the wintering party on Wrangel Island, and of Starfsev). This is a record of the trial, etc., of Semenchuk who was accused of denying food, fuel, etc., to the natives, of "bestial" behavior generally, even to the sick, and with aid of some subordinates, of suppressing efforts to inform higher authorities. Semenchuk, according to his own words, was "the prosecutor, the GPU and the court" of the place. The doctor of the party who was most active in fighting this corruption, was sent one day by Semenchuk to a nearby point under the guidance of Starfsev and did not return. His battered body was found later. Semenchuk's investigation, based solely on Starfsev's story, concluded that the doctor, apparently drunk, lost his way and froze to death. Later expert examination revealed that the doctor had been killed by a blow on the head. His widow was for long prevented from getting in contact with the outside world, but eventually court proceedings, in which the author was public prosecutor, took place in Moscow on May 17-23, 1936. Both defendants were sentenced to death. An appeal for clemency was rejected.

**27197. VYSHNEPOL'SKIĬ, S. A.** K probleme pravovogo rezhima arkticheskoi oblasti. (Sovetskoe gosudarstvo i pravo, July 1952, no. 7, p. 36-45) **Title tr.:** Contribution to the problem of the legal status of the arctic region.

*Contains bitter attacks upon the attitude of the U.S. on the ground that it opposes the sector principle in sovereignty of the Arctic as proclaimed in 1926 by Central Executive Committee of the U.S.S.R. Following the opinion of Prof. E. A. Korovin and other Soviet authorities, the author advocates the extension of this principle, to apply not only to lands and islands as it was established by the decision of 1926, but to all arctic waters as well, with the exception of the Barents and Bering Seas. He emphasizes the claim to Soviet sovereignty over Kara, Laptev, part of Chukchi, and East Siberian Seas, presenting special arguments in the case of each of these seas.*

**27205. WAGER, LAWRENCE RICHARD, 1904-**, and R. L. MITCHELL. The distribution of trace elements during strong fractionation of basic magma; a further study of the Skaegaard intrusion, East Greenland. (*Geochimica et cosmochimica acta*, 1951. v. 1, p. 129-208, tables)

The Skaegaard intrusion forms a large area on the east side of Kangerdlugsuaq, 68°10' N. 31°40' W. "A number of trace elements have been determined spectrographically in the rocks and minerals . . . The original basic magma had a normal trace element composition. The sorting out of the trace elements into the various mineral series produced by strong fractional crystallization of the original basic magma is traced in detail by means of analyses of the separated minerals."—From the author's abstract. Bibliography (80 items).

Preliminary contribution of data (upon which more observations and more study are needed) from the Alaska Crab Investigation 1940-42. The latter operated vessels in southern Alaskan waters (Frederick Sound to Alaska Peninsula) and in southeastern Bering

Sea to Saint Lawrence Island. Data cover relative growth, reproduction, growth processes, migrations, habitat, and food of the king crab. Note is given on protection of the fishery. Bibliography (6 items). **Copy seen:** DL.

**27238. WALLACE, WILLIAM STEWART, 1884-** . The literature relating to the Norse voyages to America. (Canadian historical review, Mar. 1939. v. 20, no. 1, p. 8-16)

*Contains* survey and discussion of Icelandic sagas and finds of relics (in Baffin Bay, Minnesota, and Ontario) from which derive evidence and claims of Norsemen's visits to North America. Critical correlation of modern (since 1705) literature on "Vinland," the Kensington rune stone and Beardmore relics is given, with conclusion that Norsemen from Greenland reached King-igtarsuk Island in Baffin Bay, almost certainly reached Gulf of St. Lawrence, and (from Vesterbygd early 14th century) may have penetrated to Hudson Bay, northern Ontario and Minnesota.

**27259. WARD, W. H.** Baffin bivouac. (C. I. L. oval, Apr. 1951. v. 20, no. 2, p. 14-16, illus.)

Popular account by one of the glaciologists, of P. D. Baird's Baffin Island Expedition 1950 for the Arctic Institute of North America; noting its flight to Clyde Inlet May 15-20, work of its various parties, glaciologists and meteorologists, biologists, mountaineers, geologists; and (especially) contribution

of modern scientific-industrial products to equipment and facilities of the expedition.

**Copy seen:** CaMAI.

**27260. WARD, W. H.** The glaciological studies of the Baffin Island Expedition, 1950, part II. The physics of deglaciation in central Baffin Island. (Journal of glaciology, Mar. 1952. v. 2, no. 11, p. 9-23, illus., plates, sketch map). From a paper read at a meeting of the International Commission on Snow and Ice, Brussels, 1951.

Contains discussion of "the shearing and ablation of 'cold' ice that leads to the formation of ablation and end moraines and the characteristic form of the S. E. edge of the Barnes Ice Cap. Some evidence suggests the existence of considerable areas of dead glacier ice extending well beyond the current moraines and completely insulated from melting by glacial debris. This debris consists of old moraines whose relief has been inverted and subdued."—Author's abstract.

Appendix (p. 22-23): Moraine plant succession at the edge of the ice cap, by M. A. Hale, who concludes "that the last stable position of the S. E. edge of the icecap occurred about 1860 and has been followed by retreat at an average rate of about three meters per year."

**27261. WARD, W. H.** The glaciological studies of the Baffin Island Expedition, 1950, part III. Equipment and techniques. (Journal of glaciology, Nov. 1952. v. 2, no. 12, p. 115-21, illus., diags.)

"A thermo-electric boring rig which achieved a maximum penetration of only 70 ft. due to low temperature and imperviousness of the ice is described. Thirty kw. would be needed to penetrate the ice with this equipment at a depth of 1000 ft. Mechanical drilling and temperature measurement in cold rock and ice are discussed. Cold ice may be drilled with a saw toothed coring tool, either dry or with a non-freezing liquid to flush the ice cuttings. Thermistors were used for the remote temperature measurements. The paper and pencil technique of crystal rubbings commonly used on temperate glaciers proved unsatisfactory on cold ice, since satisfactory rubbings can only be made on melting ice.—SIPRE. Bibliography (7 items).

**27263. WARD, W. H.** A note on elevated strandlines of Frobisher Bay, Baffin Island. (Geographical review, Oct. 1952. v. 42, no. 4, p. 651)

Contains challenge of view expressed by S. A. Wengerd, q. v. On the basis of two crossings by sea and one by air while a member of the Baffin Island Expedition of 1950, the author doubts that the strandlines of Frobisher Bay, or of the other bays along the east coast of Baffin Island, are necessarily indications of sea levels or uplift of land. He suggests that these strandlines may have been formed by glaciers cutting off bays and damming up their water, which subsequently changed levels independently of the sea; such phenomena occurring at present, in other places, are quoted in support.

Andrejef's indledning til den russiske udg. København, Rosenkilde og Bagger, 1948. 139 p., plates, fold. maps. **Title tr.:** Vitus Bering's adventurous voyage of discovery 1733-1743, portrayed by his fellow voyager and first officer. Preface by Hakon Mielche; with an extract from A. Andreev's introduction to the Russian edition.

Translated by Johan Skalberg from the original German ms., now in Publicnaia biblioteka, Leningrad. Also published in Russian (see item following) and English (above).  
**Copy seen:** DLC.

**27281. WAXELL, SVEN LARSSON, 1701-1762.** Vtoraiâ Kamchatskaia ékspeditsiia Vitusa Beringa; perevod s rukopisi na nemetskom yazıke fl. I. Bronshtefna; pod red. i s predisl. A. I. Andreeva. Leningrad, Izd-vo Glavsevmorputi, 1940. 127 p., illus., maps (part fold.) facsim. **Title tr.:** The Second Kamchatka Expedition of Vitus Bering; translation from the manuscript in German by fl. I. Bronshtefn; edited with an introduction by A. I. Andreev.

Account of the second Bering expedition, 1733-1741, by one of its participants, and after Bering's death, commander of the vessel *Sr. Petr*. The introduction contains the story of the manuscript (published here for the first time), and a biography of Waxell with an appreciation of his work. The journal includes sections on: the preparation, composition, scientific personnel and crew of the expedition; its aims: (1) search for a

passage from the Russian Arctic into the Pacific Ocean; (2) search for a route to Japan and clarification of Japan's location in relation to Kamchatka; (3) discovery of new places and islands in America. The itinerary is given, with descriptions of Tobolsk, Yakutsk, Okhotsk, Petropavlovsk and other settlements. Then follow accounts of the Japanese expedition; winter in Kamchatka; voyage to the northwest American coast in the summer of 1741, on which the author accompanied Bering on the *Sr. Petr*; description of Bering Island and life there during the wintering of 1741-42, in the course of which Bering died; activities on Kamchatka, description of its location, geography; natural resources; the inhabitants, their occupation and habits; common animals and plants. Some marine and terrestrial birds and mammals of Bering Island are described, including the now extinct sea cow (with illustrations), whose meat, according to the author, saved the expedition from scurvy and death.

This work was published in Danish translation from the original manuscript, also in English translation from the Danish edition (see items above).

**27289. WEBER, NEAL ALBERT, 1908-** A survey of the insects and related arthropods of arctic Alaska, part 1. (American Entomological Society. Transactions, Sept. 1950. v. 76, p. 147-206, 7 plates)

Based on work sponsored by the Arctic Institute of North America with funds provided by the U. S. Office of Naval Research. Brief introductory remarks on the author's reconnaissance in 1948 from the Brooks Range northward to the arctic coast; on the origin of arctic insects, the Brooks Range as a barrier since the close of the Cretaceous period, migratory routes, the nature of the fauna, and on the relation of insects with plants, fishes and mammals. Lists with localities and a few field notes, of the spiders, mites and ticks, the centipedes and insects, altogether 102 species. Bibliography (51 items).

**27290. WEBSTER, A. P.** Caloric requirement of man in cold climates: theoretical considerations. (Journal of applied physiology, 1952. v. 5, no. 3, p. 134-42, 3 fig., tables)

*Contains* a mathematical study of the heat necessary to warm and humidify the inspired air at various (including low) temperatures, and of the fraction of the total energy metabolism involved in the process. Tables and graphs show the increase in caloric requirement (food intake) of man which might be expected (in cold climates) at various air temperature.

**27291. WEBSTER, C. J.** The growth of the Soviet Arctic and subarctic. (Arctic, May 1951. v. 4, no. 1, p. 27-45, 3 maps)

*Contains* a brief summary of the Soviet concept of the Arctic and sub-Arctic, and the evolution of that of the far North. Then follows author's account of that part of European and Asiatic U.S.S.R. which lies north of 60° N. lat. The Soviet development of transportation, mining, fisheries, timber, furs and game, and agriculture is traced. Popula-

tion growth, shifts and present size are analyzed on the basis of 1926, 1939, and 1947 data for areas and populated places. Extensive sources are cited in footnotes. *Maps* show (1) administrative-territorial divisions with boundary of southern limit of Krainiy Sever (far North), (2) railroad lines, and (3) ethnography (present-day areas of northern native peoples).

*Copy seen:* DAI; DLC.

**27292. WEBSTER, C. J.** The Russian arctic sea lane: endeavour and achievement. (Arctic, Dec. 1952. v. 5, no. 4, p. 241-49)

Contains an analysis of the book *The Northern Sea Route*, 1952, by Terence Armstrong, q. v. The difficulties of a clear historical presentation of early Russian and foreign advances into the area are stressed and so is the one-sided or slanted character of some official Russian data used. The book is, in the opinion of the reviewer, written "with scrupulous care and artistry. The selection of statistics has been most judicious, . . . and the sources purged of their extravagance." *Copy seen:* DLC.

**27293. WEBSTER, J. H.** Eskimos glaze their sled runners. (Natural history, Jan. 1950. v. 59, p. 36-37, illus.)

Brief note to accompany photographs of the icing of sledge runners.

*Copy seen:* DGS; DSI-M.

**27294. WEBSTER, J. H.** Fishing under the ice. (Natural history, Mar. 1950. v. 59, p. 140-41, illus.)

Five photographs illustrating the fishing methods of the Copper Eskimos of the Western Canadian Arctic are accompanied by brief captions.

*Copy seen:* DGS; DSI-M.

**27295. WEBSTER, JACKSON DAN, 1919-** . Altitudinal zonation of birds in Southeastern Alaska. (Murrelet, May-Aug. 1950. v. 31, p. 22-26, incl. diagr.)

Characterization of habitat and avifaunas of the Canadian zone (sea level to 1,500 feet), Hudsonian zone (1,500-2,500 feet) and arctic-alpine zone (above 2,500 feet). Bibliography (16 items).

*Copy seen:* DSI-M.

**27296. WEBSTER, JACKSON DAN, 1919-** . Corrections concerning data on Alaskan birds. (Condor, Jan. 1951. v. 53, p. 54)

Author's record of redstart in Southeast Alaska is the second not a first record as

stated in his *Notes on the birds of Wrangell*, etc., 1950, q. v. Other errors are noted in earlier papers misnaming invertebrate species in connection with the black oyster-catcher.

*Copy seen:* DLC; DSI-M.

**27297. WEBSTER, JACKSON DAN, 1919-** . Notes on the birds of Wrangell and vicinity, Southeastern Alaska. (Condor, Jan. 1950. v. 52, p. 32-38)

On the basis of observations made during Mar.-Aug. 1946, mainly in the Canadian zone (some in Hudsonian), field notes on 51 species are given. The records are believed to be worthwhile for the area as a whole, in which much avifaunal work has already been done, and to be a contribution to the avifauna of the Stikine River above Point Rothsay. Bibliography (19 items).

*Copy seen:* DSI-M.

**27298. WEDOW, HELMUTH, and others.** Interim report on an appraisal of the uranium possibilities of Alaska. [Washington, D. C.] 1951. 5 p. l., 124 numb. l., 8 fold. maps, fold. tables. (U.S. Geological Survey. Trace elements memorandum report 235) Mimeographed. Other authors: M. G. White and R. M. Moxham.

Contains "summaries of the geology and mineral deposits, and appraisals of the uranium possibilities of the various regions of Alaska . . . based on known occurrences of radioactive materials and geologic criteria that suggest the presence of uranium . . . Seward Peninsula - Kobuk region and southeastern Alaska followed by the Alaska Railroad, Gulf of Alaska and lower Yukon-Kuskokwim regions are perhaps the more promising regions . . ." Bibliography (140 items).

**27320. WELLS, JAMES RALPH, 1893-** , and **P. HEINBECKER.** Further studies on immunity to diphtheria among Central and Polar Eskimos. (Society for Experimental Biology and Medicine. Proceedings, 1932. v. 29, p. 1028-30, tables)

Report on an additional study of eight Eskimo communities, made in 1931. Results of cultivation of throat flora, of Schick and serological tests indicate "that resistance...in these localities depends on the presence of antitoxin and suggest that carrier conditions, as well as latent specific infections are the probable sources of this immunity. Bibliographical footnotes.

**Copy seen:** DSG.

**27321. WELLS, JAMES RALPH, 1893-** , and **E. DIXON.** *Hemophilus influenza* from the throats of Polar Eskimos. (Journal of infectious diseases, 1932. v. 51, p. 412-15, illus.)

Report based on a study of 136 Eskimos from Robertson Bay (77°50' N. lat. northwest Greenland, Dundas Harbour (North Devon Island), Pond Inlet and Pangnirtung (Baffin Island). The isolation of *Hemophilus influenzae* from throat cultures of these four groups of Eskimos is reported and the principal characteristics of five of the strains are given. Four of these five belong to one serological group, corresponding to type "A" of Pittman. The findings indicate that the respiratory flora of the examined Eskimos is very similar to that of persons living in warmer climates, without a great degree of isolation.

**Copy seen:** DSG.

**27322. WELLS, JAMES RALPH, 1893-** , and **P. HEINBECKER.** Immunity studies among Central and Polar Eskimos. (Society for Experimental Biology and Medicine. Proceedings, 1931. v. 28, p. 887-89, tables)

Report based on material and data

collected in 1930 and including cultures and direct smears from throats of 115 individuals, also 19 specimens of sera and 60 Schick tests, representing seven isolated groups of Central and Polar Eskimos of all ages. The data, and the fact that the respiratory flora was found to be similar to that of groups living elsewhere make the authors believe, that the mechanism of the production of immunity to diphtheria among the Eskimos examined, is much the same as it is among people living in other latitudes.

**Copy seen:** DSG.

**27323. WELLS, JAMES RALPH, 1893-** . Occurrence of *Hemophilus influenza* in throats of Polar Eskimos. (Society for Experimental Biology and Medicine. Proceedings, 1932. v. 29, p. 801-802)

Report on a study of material from 115 Central and Polar Eskimos begun in 1930. From cultures of throat flora "18 strains of Gram-negative, hemophilic bacilli, possessing the accepted characteristics of *Hemophilus influenzae* were isolated." This strengthens the author's belief that the respiratory flora of the Eskimos studied, is very similar to that of persons living in warmer climates without a high degree of isolation found in the arctic regions.

**Copy seen:** DSG.

**27324. WELLS, JAMES RALPH, 1893-** . The origin of immunity to diphtheria in Central and Polar Eskimos. I. A study of the throat flora (American journal of hygiene, 1933. v. 18, p. 629-55, illus., tables)

Contains sections on: materials (from 250-275 persons of ten different settlements on Baffin, North Devon and Ellesmere Island and northwest Greenland, consisting of throat cultures, smears, blood sera, Schick test records and various health and epidemiological data: all material collected in 1930 and 1931); bacteriological studies and results; comparison of 1930 with 1931 findings; immunological studies; summary. Conclusions: 329 throat cultures and 301 direct smears examined and the composition of the flora determined, show that the "normal throat flora of these Eskimos is essentially the same" as that of persons in the U. S. A. and Europe. This finding suggests that the Eskimos' flora may have been influenced or determined by contact with foreigners. Several tests also indicate that typical *Carynebacterium diphtheriae* are present in the throat flora of the Eskimos and that

carriers of diphtheria exist among them. Bibliography (24 items).

**Copy seen:** DSG.

**27325. WELLS, JAMES RALPH, 1893-** . The origin of immunity to diphtheria in Central and Polar Eskimos, II. Epidemiological and serological studies (American journal of hygiene, 1933. v. 18, p. 656-73, tables)

*Contains sections on:* material (collected 1930-31; Schick test on 170 Eskimos of various age-groups and blood serum from 58 adults for direct titration of the antitoxin content); serum titrations; epidemiological considerations; habits of living; infectious diseases; discussion; summary. Conclusion: "The serological and epidemiological evidences herein reported, combined with the bacteriological findings already published, all justify the belief that immunity to diphtheria among the Eskimos in question is specific rather than the result of maturation phenomena." Bibliography (47 items).

**Copy seen:** DSG.

**27326. WELLS, JOHN CAMPION.** The gateway to the Polynia; a voyage to Spitzbergen. From the journal of John C. Wells. London, H. S. King & Co., 1873. 2 p. l., [vii]-ix p., 1 l., 355 p., front., illus., plates, fold. map., fold. plan.

Narrative of a whaling trip with Leigh Smith in summer 1872 to West Spitzbergen on the cruiser yacht *Samson* (reaching 80°30' N. 12° E.) which the author accompanied to confirm sea-water temperature observations made in the previous year by Smith. Includes introductory chapter on the history of arctic exploration and needed investigations, and (throughout the narrative) detailed remarks on hydrography, sea and land life, geology, icebergs, etc., observed.

**Copy seen:** DLC.

**27327. WELLS, L. J., and M. ZALESKY.** Effects of low environmental temperature on the reproductive organs of male mammals with annual aspermia. (American journal of anatomy, May 1940. v. 66, no. 3, p. 429-47, plate, table, diagr.)

*Contains account of a study on male ground squirrels, experimentally subjected to low temperatures, to see whether their annual sexual cycle would be modified by such treatment. A constant low (40° C.) temperature transforms the male from a seasonal breeder to one anatomically capable of breeding at any time of the year, provided treatment is begun*

during the mating season; under these conditions, sperm production and large accessory reproductive organs were maintained for more than 12 months. Low temperature treatment (4-18° C.) began during the aspermic period had little effect on the sexual cycle, and light had none. The mechanism by which low environmental temperatures seem to affect the sexual cycle, is discussed. Bibliography (14 items). **Copy seen:** DSG.

A monograph forming part of a synopsis of North Atlantic polychaete worms, based on all available literature and on the extensive collection in the Zoological Museum of Copenhagen University. Classified list is presented, with synonymy, references, full notes on occurrences, distribution and other remarks, of over 200 species; tabular presentation of distribution in Davis Strait, Baffin Bay and in certain fiords of West Greenland, with remarks; a series of charts illustrate distribution in the same waters. Bibliography (47 items).

Contains a brief description of the petrologic and structural relations and mineralization of the Brooks Mt. terrain. Granite, and felsic and mafic dikes intrude Cambrian or older black slate and the Port Clarence Paleozoic limestone. The granite and limestone are hydrothermally altered and uranium in the form of zeunerite is concentrated in trace amounts at a few locations. Results of radiometric analyses are included.

Geologiska undersökning. Afhandlingar och uppsatser. ser. Ca. no. 5, pt. 2) **Title tr.:** Observations of the Sulitelma Glaciers made in the summer of 1908.

The extent to which the Sulitelma Glaciers (in northwestern Sweden) had receded between 1898 (the date of the author's previous visit) and 1908 was determined. The ice ablation of the most important glacier of the group, the Stuorajekna, was measured, from July 14 to Aug. 7, and its mean rate per 24 hours was determined. Tabular information is presented on changes in the thickness of the snow cover on and near the Stuorajekna, the cover's specific weight, and the height of the front part of the Stuorajekna. The surface height of the glacier's front in 1908 is compared with its 1897 and 1898 height.

**27354. WHITHAM, PAUL PAGE, 1878-** Planning of Alaskan ports. Washington, U.S. Govt. Print. Off., 1916. 24 p., incl. maps, fold. diagr., 13 plates.

Engineer's report recommending government-planned development of Alaskan port sites. Appended are excerpts from articles on port terminal problems recently published in technical journals, and 12 illustrations (among others) of Alaskan harbors.

**Copy seen:** DLC.

**27355. WHITTAKER, HAROLD A., and others.** Disposal of garbage in permafrost areas. (National Research Council. Committee on Sanitary Engineering and Environment, Bulletin, 1949. p. 183-93) Other authors: Lloyd K. Clark, Ralph E. Fuhrman, Harvey G. Rogers and Harold A. Thomas, Jr.

Contains on the basis of information obtained "largely through correspondence or conference" with persons resident in the North, a review of garbage disposal practices of Eskimo and white population including the Armed Services, to deter-

mine the extent of rodent and insect problems, the health hazards, and to recommend improved techniques. The survey showed that Eskimos dumped waste into water courses about dwellings and nearby dumps, or fed the garbage to the dogs. Civilians usually established a collection system with final disposal into dumps, water courses, and sea. The Armed Services stored waste in covered containers which were collected for disposal in sanitary fills and incinerators. Rodent and insect infection hazards were combated with 1080 rat poison, petroleum-base DDT, and improved garbage disposal methods. No plagues or epidemics were reported. The presence of trichinosis in polar mammals and arctic dwellers was attributed to improper waste disposal. Adequate garbage disposal methods, preferably incineration are recommended.—From SIPRE.

**Coppy seen:** DSG.

**27356. WHITTAKER, HAROLD A.** Sanitation needs in Alaska. [Juneau] Alaska, Dept. of Health, 1949. 26 p. illus., diagrs.

The author, special consultant to U.S. Public Health Service, spent July-Aug. 1948 in Alaska to determine the acute problems of environmental sanitation there. From his field observations and official data, he reviews these problems and suggests research studies essential for their solution. The sanitation activities of the Alaska Dept. of Health are reviewed (p. 6-13); and sanitation conditions noted (p. 13-19) for Anchorage and Fairbanks, Juneau and Ketchikan, and for Klawock and Barrow as representative of native villages. Special problems of the permafrost area (some 370,000 sq. mi. covering 60 per cent of the Territory) are discussed (p. 19-22) in regard to building construction, water supply, water purification, sewerage and water distribution systems. Finally author characterizes the studies required in these problems as well as in rodent and insect control, shellfish poisoning, food handling and garbage disposal, clothing, waste disposal. The prevalence of enteric infections in Alaska is summarized by Dr. Ralph B. Williams (p. 22-24). Establishment of an Arctic Health Institute is recommended.

**27378. WIKLUND, KARL BERNHARD, 1868-1934.** De svenska nomadlapparnas flyttningar till Norge i äldre och nyare tid. Uppsala, Almqvist & Wiksell, 1908. 2 p. l., 248 p. incl. tables. **Title tr.:** The movement of the Swedish nomad Lapps to Norway in ancient and recent times.

Based on historical research and linguistic investigation, a study of the visits of Swedish Mountain Lapps and their reindeer from Västerbotten and Norrbotten to various localities in the Norwegian counties, Nordland and Troms. On basis of linguistic data, author believes that the Lapps lived as hunters and fishermen on the northernmost coast previous to the Old Norse period, when they were reindeer nomads and came into contact with the Norse people. Throughout the Middle Ages and subsequently to the present, Swedish Mountain Lapps have followed their reindeer, moving into Norway in summertime, for reasons of climatic and other natural conditions. In later times there has been a decrease in those going to Nordland county but an increase in those to Troms (statistical data for Troms 1884-1908). No details are available on the move from Norway back to Sweden.

Contains three articles on language of the Lapps; influence of the Teutonic languages. *Copy seen:* DLC; InU.

**27385. WIKLUND, KARL BERNHARD, 1868-1934.** The Lapps in Sweden. (Geographical review, Apr. 1923, v. 13, p. 223-42; illus., map)

Contains introductory remarks on contacts and cultural interchange between Lappish and Swedish peoples; discussion of the Lapps' origin and racial affinities, their penetration from the northeast into the Scandinavian peninsula with a Finno-Ugric language already adopted and their reindeer economy established; description of the considerable differentiation among the Lapps, particularly in dialect, and occupation; their migratory movements due to encroaching Swedish settlement and seasonally for pastures. The political and legal status of Lapps is analyzed, also their historic rights of migration in relation to international frontiers and to pioneering agriculturists from the south. In the latter half of the paper, the author offers data on numbers and distribution of Lapps, specific details on their dwellings, sledges, saddles and skis, dress and food. The elements of their religion are presented and the penetration into their nomads' culture, of modern Swedish institutions and practices: schools, language, sedentary occupation (farming) and business (meat and hide production). A realistic appraisal of their cultural position is given, correlating it with that of the Swedish peasant living in the same tract.

**27387. WIKLUND, KARL BERNHARD, 1868-1934.** Untersuchungen über die älteste Geschichte der Lappen und die Entstehung der Renttierzucht. (Folk-Liv, 1938. v. 2, p. 12-47, 362-404, 10 illus., 16 plates) *Title tr.*: Investigation of the earliest history of the Lapps and the origin of reindeer breeding.

Contains chapters on: man and reindeer; the subarctic hunters and fishers; animal husbandry and beginnings of agriculture on Lappish soil; reindeer breeding. Though the reindeer naturally associates easily with man, it is difficult to break in as a draft animal. It must be castrated and tamed, but never becomes domesticated like the cow or horse. The most successful taming is that by Samoyeds and Tungus who ride the animal's back. Lapps lure the wild reindeer by salt, camp-fire smoke (protection against mosquitoes) and decoys (domesticated reindeer). Lappish techniques for the breaking-in and harness (single) are described, and theories on the origin of man's domestication of reindeer discussed, with considerable reference to the Samoyeds and Tungus. The author discounts the theory (Kai Donner's) that Lapps learned reindeer husbandry from Samoyeds. He touches also on: development of skis and sledges (at first man-drawn) among the Lapps (they do not have snow-shoes); names and types of Lapp boats; hunting (especially of wild reindeer), fishing and trapping techniques, Lapp implements, utensils, and tools. He remarks on the Proto-Lapps' technique of fishing and hunting as taken over from the Chuds; and on tracing the development of agriculture by following the etymologies of Lapp words for victuals, domestic animals and crops: they are mostly the loan-words from the Scandinavians from whom very early Lapps learned something about agriculture, Troms and Salten districts being the points of contact.

**27389. WILBER, CHARLES G., and X. J. MUSACCHIA.** A comparative study of lipids in arctic marine mammals. (Journal of mammalogy, May 1950. v. 31, p. 162-67, tables)

Results of research, supported by the Arctic Institute of North America, on analyses of cholesterol, phospholipid, and fatty acids of the liver and kidneys of the polar bear and seal, the heart and liver of walrus and the whole blood of seals; showing unusually high level of fat metabolism in the seal. Bibliography (13 items).

**Copy seen:** DGS; DSI-M.

**27390. WILBER, CHARLES G., and V. E. LEVINE.** Fat metabolism in Alaskan Eskimos. (Experimental medicine and surgery, 1950. v. 8, no. 2-4, p. 422-25, tables)

*Contains* a study on the average values for serum lipids, made on 70 Eskimos of Point Barrow, representing about 10 per cent of the population. Results indicate consistently high mean lipid values for both men and women. The significance of these findings, especially in relation to the nearly total absence of cardiovascular-renal diseases in the population is discussed. Bibliography (16 items).

**Copy seen:** DLC.

**27391. WILBER, CHARLES G., and X. J. MUSACCHIA.** Fat metabolism in the arctic ground squirrel. (Journal of mammalogy, Aug. 1950. v. 31, p. 304-309, tables)

Results of research, supported by the Arctic Institute of North America, on the lipids in the blood, liver and kidneys of *Citellus barrowensis*, collected near the

Arctic Research Laboratory, Point Barrow, Alaska. Bibliography (14 items).

**Copy seen:** DGS; DSI-M.

**27392. WILBER, CHARLES G.** Fat usage in arctic as compared with temperate zone mammals. (St. Louis University, Medical bulletin, June 1952. v. 4, no. 6, p. 112-19, diagrs., tables)

*Contains* a study of lipid metabolism of various arctic mammals and a comparison with animals living in the temperate zone. Blood, liver and kidneys of the polar bear, seal, walrus, ground squirrel, etc. were analyzed. Fat was found to serve both as insulator against cold and as a source of stored energy; land animals have only a short feeding season and must store fat for the rest of the year; some, as the ground squirrel consume this fat during hibernation. This study was aided by the Arctic Institute of North America, the U. S. A. F. and the O. N. R. Bibliography (29 items).

**Copy seen:** CaMAL.

**27393. WILBER, CHARLES G.** Fur seal blubber. (Journal of mammalogy, Nov. 1952. v. 33, no. 4, p. 483-85, diagr., tables)

*Contains* a chemical analysis for total cholesterol and phospholipid of a sample of frozen orange blubber from the back of a three-year-old fur seal (*Callorhinus ursinus*) from St. Paul Island, Alaska. Comparison for the two compounds, with other land and aquatic animals are made and the cause of the orange color of the blubber discussed. **Copy seen:** DGS.

**27394. WILBER, CHARLES G., and X. J. MUSACCHIA.** A survey of lipids in arctic animals, Dayton, Ohio, April 1951. 20 p. tables, diagr. (U. S. Air Force. Wright Air Development Center, Wright Air Force Base, Aeromedical Laboratory, Report no. 6463)

*Contains* a report on lipid estimations from tissues of the following animals in the Arctic: tom cod, an amphipod, ground squirrel, jaeger, loon, snowy owl and eider. The birds showed a similarity of lipid pattern from one order to another. The tom cod tissues contained over 90 per cent of esterified cholesterol which is much higher than in the tissues of homothermes. The amphipod had a very high phospholipid content. Lipids in starving ground squirrels were similar to those in hibernating ones. Bibliography (12 items).

**27409. WILLIAMS, MERTON YARWOOD, 1883-** . Churchill, Manitoba,

a naturalists' rendezvous. (*Canadian geographical journal*, Feb. 1950. v. 40, 70-79, illus.)

Account of mammals and birds (47 species) amphibia, fish and insects, forests and plants, observed during June-July, 1947; with a bibliography (6 items).

*Copy seen:* DGS; DLC.

**27410. WILLIAMS, RALPH B.** The cedar waxwing, *Bombycilla cedrorum*, at Juneau, Alaska. (*Auk*, Oct. 1950. v. 67, p. 519)

Note on the records of this species of bird in 1948-49, previously without a published record of occurrence as far north as Juneau. *Copy seen:* DSI-M.

**27411. WILLIAMS, RALPH B.** Echinococcosis on hydatid disease. (Alaska's health, Feb. 1948. v. 6, no. 2, p. [7])

Description of the disease caused by the dog tape-worm and discussion of control measures, occasioned by a case found among Tanana Indians.

*Copy seen:* DLC.

**27412. WILLIAMS, RALPH B.** A laboratory grows. (Alaska's health, Mar. 1945. v. 3, no. 3, p. [4-5])

Sketch (by the director at Juneau) of the development of public health laboratories, beginning in Juneau, 1936 expanding in 1940 to Anchorage, and 1943 to Ketchikan.

*Copy seen:* DLC.

**27413. WILLIAMS, RALPH B.** Serum gamma globulin now available in Alaska. (Alaska's health. Nov. 1945. v. 3, no. 11, p. [7])

On the availability, methods of handling and administering of a globulin for prophylaxis and modification of measles, with data on incidence of the disease over a five-year period in Alaska.

*Copy seen:* DLC.

**27414. WILLIAMS, RALPH B.** Storage of biologicals at sub-zero temperatures. (Alaska's health, Sept. 1945. v. 3, no. 9, p. [6-7])

Practical directions for keeping small-pox vaccine, toxoids, bacterial vaccines, serums and antitoxins, and rabies vaccine.

*Copy seen:* DLC.

**27415. WILLIAMS, RALPH B.** Summary of *Salmonella* and *Shigella* of Alaska. (Northwest medicine, May 1950. v. 49, no. 5, p. 340, map)

Note on outbreaks of gastroenteric diseases in all parts of Alaska, and difficulty of epidemiologic investigation.

Isolation of Gram-negative bacteria of the genera *Salmonella* and *Shigella* of the family Enterobacteriaceae in 118 instances during 1944-49. Check list of cultures in which these bacteria were isolated at the Alaska Dept. of Health laboratories at Juneau 1936-49; and remarks on vaccination and sanitation as preventive measures against typhoid fever. **Copy seen:** CaMAI; DSG.

**27416. WILLIAMS, RALPH B.** Tularemia; first case to be reported in Alaska. (U. S. Public Health Service. Public health reports, 1946. v. 61, p. 875-76)

Contains a brief account of research work hitherto conducted in Alaska on the carriers of this disease (ticks) and a record of a definite case of tularemia, the first reported in Alaska (1945). The cause of disease, symptoms, blood count, etc., and treatment are given. The patient apparently contracted the disease while skinning muskrats. Occurrence in continental United States and foreign countries is discussed.

**Copy seen:** DSG.

**27417. WILLIAMS, RALPH B.** Tularemia in Alaska. (Alaska's health, Dec. 1945. v. 3, no. 12, p. [2-3])

Description of the disease, notes on infection in Alaskan wildlife and records of cases in the Territory.

**Copy seen:** DLC.

**27418. WILLIAMS, ROGER W.** Observations on the bionomics of *Culicoides tristriatulus* Hoffman with notes on *C. alaskensis* Wirth and other species at Valdez, Alaska, summer 1949. (Diptera, Heleidae). (Entomological Society of America. Annals, 1951. v. 44, no. 2, p. 173-92, tables)

Contains an account of the life history of the gnat *Culicoides tristriatulus* at the seaport of Valdez, where it is a serious pest, with the aim of developing

a control program, by destruction of the young stages. Data on: the breeding places and their physical and chemical conditions, larval and adult concentrations, eggs and development, emergence, hibernation, flight range, activity, etc., are offered. The pupae of a new species, *C. alaskensis* Wirth, were found in one area whose general physico-chemical conditions are outlined. Nine other species of Heleidae, none of any importance, were found in Valdez. Bibliography (7 items).

**Copy seen:** DSI-M.

**27419. WILLIAMSON, KENNETH.** The distraction behavior of the arctic skua. (Ibis, Apr. 1949. v. 91, p. 307-313)

Aggressive and passive forms of distraction displays of colonial nesters and a solitary pair, and various patterns of lure display are described. All are analyzed and the latter patterns are said to be "derived from the primitive food-begging of the chick, and elaborated with actions from courtship display." Bibliography (15 items).

**27425. WILSON, CLIFFORD.** editor. The new North in pictures. Toronto,

Ryerson Press [1947] 223 p. illus. (part col.), ports.

Contains photographic illustrations reprinted from the Hudson's Bay Co. journal, *The Beaver*, "in the past dozen years", Canadian wildlife, landscapes and settlements, Indians, Eskimos and white men "as they went along their daily tasks." Introduction by the editor includes brief notes on the photographers, professional and amateur, who contributed their work to *The Beaver*.

**Copy seen:** DLC.

**27426. WILSON, CLIFFORD.** White whale roundup. (Forest and outdoors, 1945. v. 41, p. 187-88, illus.)

Contains account of whaling in Kingua Fiord at the head of Cumberland Sound, with a description of the locale and the method used by the Eskimos to drive the whales over a shallow bank into the blind end of the fiord, the killing and flensing, etc.

**Copy seen:** DA.

**27427. WILSON, GEORGE S.** Barrow day school nutrition program. (Alaska's health, May 1949. v. 7, no. 5, p. 1-3)

Note on change of diet in North Alaska Eskimos in recent times, and description of the purpose, basic diet and results of the feeding program at Point Barrow.

**Copy seen:** DLC.

**27428. WILSON, J. WARREN.** Vegetation patterns associated with soil movement on Jan Mayen Island. (Journal of ecology, Oct. 1952. v. 40, no. 2, p. 249-64, plate, diagrs., map)

Contains a study on the effect of soil movements (caused by gravitation and/or solifluction) upon the vegetation of the island, which consists largely of moss mats with scattered flowering plants. These soil movements produce in certain places, vegetation-patterns of a polygonal, terraced or otherwise regular nature; the genesis of each type of pattern, the peculiar conditions of ground where they are formed, their movements, etc., are analyzed. The study represents "Botanical results of the Oxford University Expedition to Jan Mayen 1947, and the Jan Mayen Expedition, 1950, no. 2." Bibliography (16 items).

**27434. WILSON, WILLIAM S.** The Geophysical Institute at the University of Alaska. (In: Alaskan Science Conference...1950. Selected papers, 1952. p. 170-96, plate, diagrs.)

*Contains* brief history of the University of Alaska; general review of research in arctic geophysics, initiated in 1929; activities during the Second International Polar Year; legislation towards, and establishment of the Institute (1936-49), its facilities and means of operating: building (with plans), library, shop, field stations, personnel, etc.; present research in ionospheric and signal intensity measurements, auroral heights etc., and theoretical studies; plans for future work; role of the Institute in Alaskan research.

**Copy seen:** DAI; DLC.

**27435. WILSON, WILLIAM S.** Surface ozone at College, Alaska. (American Geophysical Union. Transactions, Aug. 1951. v. 32, no. 4, p. 552-54, diagrs.)

"Daily average values of the concentration of ozone in the atmosphere near the surface are determined by the oxidation by ozone of iodine to iodide which in turn oxidized sodium arsenite to sodium arsenate; a diagram of the absorption column is given. Measurements of ozone concentration obtained at College from Jan.-March 1950 indicate moderately large interdiurnal variations with the maxima considerably higher than the minima. The concentration of ozone increases with increasing altitude of the sun. The ozone values are much more irregular and averages much higher than those obtained at lower latitudes.—*Meteorological abstracts and bibliography*, May 1952. v. 3, no. 5, p. 434-35. Bibliography (5 items).

**Copy seen:** CaMAI; DWB.

**27436. WILSON, WILLIAMS S., and others.** Surface ozone at College, Alaska, for the year 1950. (American Geophysical Union. Transactions, June 1952. v. 33, p. 361-64, diagrs.) *Other authors:* W. B. Guenther, R. D. Lowrey, J. C. Cain.

*Contains* results of daily measurements of ozone concentration, reported with temperature and pressure data, and compared with data in other localities.

*Copy seen:* DGS.

**27437. WILSON, WINIFRED E.** Our new eider down industry. (Forest and outdoors, 1944. v. 40, p. 59-60, illus.)

*Contains* information on the U. S.-Canadian Migratory Bird Convention Act, a protective law which paved the way for this young industry; the four kinds of eider ducks occurring in Canada; regulations; seasons and ways of collecting the down; cleaning; marketing; substitutes; size of production.

*Copy seen:* DA.

*Account* of the author's work and life as teacher at the Jesse Lee Orphanage at Unalaska; includes description of the journey to Unalaska, the institution and its people, Unalaska Island, the Aleuts, etc., illustrated by photographs.

*Copy seen:* DLC.

**27439. WINFIELD, R. H.** The supply by air of Exercise "Musk-Ox," 1946. (Polar record, Jan 1952. v. 6. no. 43, p. 340-44, plate, map)

*Contains* an account of the activities of the Royal Canadian Air Force in supplying a mechanized force of 47 men traveling in 11 snowmobiles about 3,000 miles on the Barren Grounds north and west of Churchill during Feb.-May 1946. This force was supplied from bases at Churchill and Yellowknife with food, fuel, equipment, etc., dropped by parachute or delivered by landing aircraft. A total of 150 tons of supplies was delivered, with less than four per cent loss from para-

chute drops. The air supply unit of nine aircraft and two gliders was under command of Wing-Commander Showler. Its work is described indicating problems of supply from the air in the Arctic in regard to aircraft maintenance, navigation, landing, weather and ice conditions; handling the cargo, parachuting and dropping supplies; clothing, fatigue, emergency equipment, food, etc.

*Copy seen:* DLC.

**27440. WING, ANNE HINSHAW.** Notes on the song series of a hermit thrush in the Yukon. (Auk, Apr. 1951. v. 68, p. 189-93)

Detailed report on five songs, four in pentatonic scale, the fifth a single note, heard during June-Aug. 1948, at Johnson's Crossing on the Teslin River.

*Copy seen:* DSI-M.

**27441. WING, LEONARD WILLIAM, 1906-** . Cyclic trends in arctic seasons. (Journal of cycle research, Autumn, 1951. v. 1, no. 1, p. 19-25, diagrs.)

Following introductory remarks on usefulness of dates on freeze-up and break-up for phenological studies, the author figures and tabulates (on the basis of local records) opening and closing of the Lewes River at Whitehorse, Yukon River at Dawson, Chena River at Fairbanks, Tanana River at Nenana, also Peace and Smoky Rivers (in Alberta). Data from Preble\* on Athabaska, Peace, Nelson, Laird and Mackenzie Rivers is added. Author notes a rather marked trend in most rivers for progressively earlier opening. "Roughly speaking this trend is equivalent to a northward climatic march of 100-150 miles during period of record at Whitehorse and about 84 miles at Dawson."

**27444. WINGO, M.** Public health in Greenland. (U. S. Public Health Service. Public health report, 1945. v. 60, p. 676-78)

*Contains a brief account of the country, climate, population and quality of administration. Tuberculosis, probably introduced long before Danish administration, is the major public health problem with a death rate (1937) of 550 per 100,000. The government maintains 17 hospitals with 350 beds (19.4 per 100,000 pop.); 80 per cent of the beds are assigned to tuberculosis patients. An outline of therapy is presented. Syphilis does not exist among the natives due to strict regulations governing persons coming from other countries. Scattered cases of gonorrhea are reported. Measles and German measles do not occur. Smallpox vaccination is obligatory, with no reports of outbreaks among the native population. Measures taken to protect the workers at the cryolite mines at Ivigtut have prevented fluorine poisoning.*

**27446. WINKLER, HEINRICH, 1848-1936.** Samojedisch und finnisch. (Finnisch-ugrische Forschungen, 1912. Bd. 12, p. 115-27) **Title tr.:** Samoyedic and Finnish.

*Contains a linguistic investigation of the plural and dual forms in both languages. The author draws conclusion that linguistically Samoyedic and Finnish can be considered as twin-brothers.*

**Copy seen:** DLC; InU.

**27447. WINKLER, HEINRICH, 1848-1930.** Samojedisch und finnisch; zweite Mitteilung. (Finnisch-ugrische Forschungen, 1913. Bd. 13, p. 120-63) **Title tr.:** Samoyedic and Finnish: second contribution.

*Author traces the linguistic affinities of the two languages in an investigation of cases, pronouns, verbs, and syntax. From this and his several other studies on the question, he is convinced of a close relationship between these two languages.*

**Copy seen:** DLC; InU.

**27448. WINKLER, HEINRICH, 1848-1930.** Tungusisch und finnisch-ugrisch. (Suomalais-ugrilainen seura. Aikakauskirja, 1913-18. v. 30, no. 9, p. 1-28) **Title tr.:** Tungusian and Finno-Ugric.

*Contains linguistic investigation based on material collected by Maydell and Czekanowski. The author tries to prove that the building of grammatic forms and the construction of sentences in Tungus show great inner and outer similarity and partly a close relationship to the Finno-Ugric languages.*

**Copy seen:** DLC; InU.

**27449. WINN, BESS A., d. 1949.** Alaska's hopes and aims. (National Tuberculosis Association. Bulletin, 1944. v. 29, p. 211-12, illus.)

*Contains an outline of the history and achievements of the Association; the high rate of tuberculosis in Alaska and the founding of the Alaska Tuberculosis Association, its program, aims, cooperating organizations, etc.*

**Copy seen:** DSG.

**27450. WINSLOW, CHARLES-EDWARD AMORY, 1877-**, and others. Heat exchange and regulation in radiant environments above and below air temperature. (American journal of phy-

siology, Nov. 1940. v. 131, p. 79-92, 5 fig.)  
*Other authors:* A. P. Gagge and L. P. Herrington.

*Contains a study of skin and rectal temperature, metabolism and evaporative heat of two subjects placed in a room where air and wall temperatures were independent from each other and each could be changed within a wide range. Bibliography (6 items).*

*Copy seen:* DLC.

**27451. WINSLOW, CHARLES-EDWARD AMORY, 1877-**, and others. The influence of air movement upon heat losses from the clothed human body. (*American journal of physiology*, Oct. 1939. v. 127, p. 505-518) *Other authors:* A. P. Gagge and L. P. Herrington.

*Reports on metabolism, skin, head and rectal temperatures, and chilling of body tissues during four series of experiments on two young men, lightly clothed in a semi-reclining position in cool environments; with conclusion that the cooling effect of air movements (under conditions of this experiment), varies with the square root of the velocity.*

*Copy seen:* DLC.

**27452. WINSLOW, CHARLES-EDWARD AMORY, 1877-**, and others. The influence of atmospheric temperature and humidity upon the dryness of the oral mucosa. (*American journal of hygiene*, 1942. v. 35, p. 27-39, 3 fig., 2 tables) *Other authors:* L. P. Herrington and J. H. Nelbach.

*Contains a study on human subjects at various temperatures (including such below freezing) and humidities. The drying effect was found to be due to neither of them, but due to the vapor pressure. A vapor pressure of .40 inches appeared to be crucial, conditions above it maintaining moisture and those below it causing dryness of the mucosa. Bibliography (13 items).*

*Copy seen:* DLC.

**27453. WINSLOW, CHARLES-EDWARD AMORY, 1877-**, and A. P. GAGGE. Influence of physical work on physiological reactions to the thermal environment. (*American journal of physiology*, Oct. 1941. v. 134, p. 664-81, 6 fig.)

*Contains a study of two undressed males pedalling on a stationary bicycle at a rate, set to increase their metabolism to over 300 kgm.-cal. per hour; also a comparison with earlier results from similar subjects at rest in a semi-reclining position, with a metabolism of 80-100*

*kgm.-cal. Included are data on the radiation area; convection constant; sweat secretion; cooperative cooling; subjective feeling, etc. Bibliography (15 items).*

*Copy seen:* DLC.

**27454. WINSLOW, CHARLES-EDWARD AMORY, 1877-**. Man's heat exchanges with his thermal environment. (*In: American Institute of Physics. Temperature, its measurement and control in science and industry. New York, Reinhold Pub. Corp., 1941. p. 509-521*)

*Contains a review of studies largely made with a procedure called and described by the author as Partitional Calorimetry. It includes the following topics: heat production of the body; avenues of heat loss under varying environmental conditions; heat loss through evaporation, convection, radiation; heat storage; physiological control of peripheral blood flow, of metabolism, and of sweating; physiological adaptation to environmental caloric-demand; upper limits of evaporative regulation. Bibliography (about 50 items).*

*Copy seen:* DLC.

**27455. WINSLOW, CHARLES EDWARD AMORY, 1877-**, and others. Physiological reactions of the human body to varying environmental temperatures. (*American journal of physiology*, Sept. 1937. v. 120, p. 1-22, 5 fig.) *Other authors:* L. P. Herrington and A. P. Gagge.

*Contains a partitional calorimetric study over a wide range of environmental temperature (6.5° C. to 35.5° C.), made on two unclothed, semi-reclining subjects, one of them stout, the other slender. Observations include metabolic rates, skin temperatures, heat loss and its relation to skin temperature; relationships between skin temperature and body temperature, evaporation, storage, etc., Bibliography (18 items).*

*Copy seen:* DLC.

**27456. WINSLOW, CHARLES EDWARD AMORY, 1877-**, and L. P. HERRINGTON. Temperature and human life. Princeton, N. J., Princeton Univ. Press, 1949. xiv, 272 p. tables, diagrs.

*A scientific monograph on the thermal physiology of man and his physiological reactions to, and technological protection from, the thermal environment. Chapters on: production of heat in the life*

process; avenues of heat loss from the body; adaptation of the human body to varying thermal conditions; thermal protective influence of clothing; objectives of air conditioning; methods of air conditioning; influence of climate and season upon health; glossary. Of special interest for arctic studies are sections on: reactions of the body to a cold environment (p. 74-78), and most of chap. 4, thermal protective influence of clothing (p. 116-62). This deals with measuring the insulation properties of clothes, physiological response of the human body to clothing, protection of the extremities against extreme cold, etc. Bibliography (151 items).

Story of the author's trip in 1899 from Sitka to the gold fields, and his other travels in Alaska, life of prospectors and Eskimos, his dog "Whiskers."

**Copy seen:** DLC.

**27461. WIRTH, PAUL.** Die Wirtschafslandschaft von Schwedisch-Lappland. (Geographica Helvetica, Apr. 1948. v. 3, p. 143-55, illus.) **Title tr.:** The landscape of Swedish Lapland, from the economic viewpoint.

The three natural geographic regions, mountains, forests and sea coast (near the Gulf of Bothnia) are characterized. Highlands with only Lapp reindeer herding and an unexploited timber region lacking transportation facilities, are found over most of the territory; a flourishing iron ore industry is noted in the region of Kiruna and (to a lesser extent) Gällivare, and agriculture in the lower region.

**27470. WOLDSTEDT, FREDRIK WILHELM, 1847-1884.** Materialier till en ichneumonologia fennica. (Bidrag till kännedom af Finland natur och folk, 1874. Haft 21, p. 61-92) **Title tr.:** Material for an ichneumon fauna of Finland.

*Contains* a systematic list of 270 species of ichneumon flies with Finnish localities and names of collectors; in-

cludes Latin diagnoses of three new species and records of at least 35 species native to Finnish and Russian Lapland.

**Copy seen:** MH-Z.

**WOLDSTEDT, FREDRIK WILHELM, 1847-1884,** *see also* Hellén, W. Ichneumonidentypen F. W. Woldstedts. 1950. No. 22525.

**27471. WOLDSTEDT, PAUL.** Der Bewegungsvorgang beim Inlandeis. (Petermanns geographische Mitteilungen, 1952. Jg. 96, p. 268-70, illus.) **Title tr.:** The movement of inland ice.

*Contains* a brief discussion of present-day views on the physical processes and mechanics of glacier movement, with conclusion that the controversial theory of extrusion flow (Max Demorest) cannot be ignored in the study of inland ice movement.

**Copy seen:** DGS.

**27472. WOLDT, A.** Die Kultusgegenstände der Golden und Giljaken. (Internationales Archiv für Ethnographie, 1888. Bd. 1, p. 92-107, 2 tables) **Title tr.:** The objects of cult of the Golds and Gilyaks.

*Contains* description of 152 objects, brought by Captain J. A. Jacobsen in 1884-85 from the Amur countries and stored in Museum für Völkerkunde in Berlin: shamanistic clothes (caps, mittens, headgear, drums, sticks, ornaments, etc.), idols, amulets against diseases, etc.

**Copy seen:** DLC.

**27473. WOLF, STEWART, and J. D. HARDY.** Studies on pain; observations on pain due to local cooling and on factors involved in the "cold pressor" effect. (Journal of clinical investigation, Sept. 1941. v. 20, p. 521-33, 9 fig.)

*Contains* a report on studies made by the authors on each other. Pain evoked by local cooling appeared to be separate from the sensation of cold, but its intensity depended directly on the degree of cooling; it is apparently mediated through small, non-myelinated fibres of class C. The stimulus causing "cold pain" may be found in the thermal gradient in the tissues of the exposed part; this stimulus may bring about also a painful vasospasm. "Adaptation" may be brought about by decrease of the thermal gradient and relaxation of the vasospasm. The cold-pressor effect appears to be "a measure of reaction to pain." Bibliography (28 items).

**27474. WOLFF, FERDINAND LUDWIG von, 1874-** . Der Vulkanismus . . . Bd. 2: spezieller Teil, Tl. 1, Hälfte. 1-2. Stuttgart, F. Enke, 1923-29. xii, 828 p., illus. (incl. sketch maps) tables, 3 fold. maps. **Title tr.:** Vulcanology . . . v. 2, Special part, pt. 1, section 1-2.

This summary of volcanoes, their periods of activity and analyses of their lavas, includes the Kamchatka-Kurile are (p. 89-101); the Wrangell volcano-group (p. 567); and the Alaska-Aleutian are (p. 568-86). **Copy seen:** DGS.

**27475. WOLFF, NIELS L.** *Crambus bonifatellus* Hulst, an unexpected component of the lepidopterous fauna of Greenland. (Entomologiske meddelelser, 1950. Bd. 25, p. 421-24, illus.)

This moth previously recorded only from Colorado and more westerly states, has been found recently in five localities of West Greenland between about 60°-64° N. lat. Full description of wings and genitalia is given.

**Copy seen:** DSI-M.

**27476. WOLFF, RICHARD C., and K. E. PENROD.** Effect of altered metabolism on extreme hypothermia in dogs and albino rats. (Federation proceedings, Mar. 1949. v. 8, p. 170)

Contains an abstract of a study on the effects of extreme hypothermia on normally fed animals and those administered propylthiouracil and thyroid extract in their diet. The experiments indicate that during immersion in very cold water (4° and 7° C.) "the metabolic defenses of the animal are not capable of significant protection."

**Copy seen:** DLC.

**27477. WOLFF, RICHARD C., and K. E. PENROD.** Factors affecting rate of cooling in immersion hypothermia in the dog. (American journal of physiology, Dec. 1950. v. 163, p. 580-84)

Results include the following: "A heavy coat of hair offered significant protection against cooling but short hair proved no better than no hair. Shivering was found to have a significant effect in showing the cooling rate, but a minimal shivering showed a tendency toward an increased cooling rate when compared to no shivering. Although a definite trend toward slower cooling with increasing body weight exists, the differences were not found to be statistically significant. No difference between sexes was detected in

the cooling rate." Bibliography (4 items).

(Bidrag till Finlands naturkännedom, etnografi och statistik. Häft. 5) **Title tr.:** Birds of Finland and their plumage, part 1.

Contains a systematic list of 131 species of birds inhabiting Finland, with brief descriptions, dimensions, local names, distribution in Finland, and detailed data

on moult and sequence of plumages (male, female and young birds). Includes many species native to Finnish Lapland. For pt. 2 (especially on geographic distribution), see M. v. Wright, and J. A. Palmén, *Finlands foglar*, 1873.

**Copy seen:** DLC; MH.

**27494. WRIGHT, MAGNUS, von, 1805-1868, and J. A. PALMÉN.** *Finlands foglar, hufvudsakligen till deras dragterbeskrifna af Magnus von Wright. Senare afdelningen, efter författarens död omarbetad med särskild hänsyn till arternas utbredning och utgifven af J. A. Palméns. Helsingfors, Finska litter.-sällskap. tryck., 1873. xvii, 681, iv p. (Bidrag till kännedom af Finlands natur och fold. Häft. 22) Title tr.: Birds of Finland and their plumage described by Magnus von Wright, part 2; revised after his death, with special reference to the geographic distribution of the species, and edited by J. A. Palmén.*

*Contains a critically revised systematic list of 131 species native to Finland, based on the senior author's work of similar title published in 1859, q. v. Descriptions (male and female) are given, dimensions, plumage by seasons (by M. v. Wright), local names, critical notes and data on distribution in Finland, Scandinavia and Kola Peninsula. Includes many species native to northern regions.*

**27496. WÜRSCH, JOSEF, 1922-** . *Untersuchungen über die Lipode aus den Gonaden des Wales. Zürich, Dissertationenverlag, 1950. 56 p. diags. Title tr.: Investigations on the lipids from the gonads of whales.*

*Contains a doctoral thesis, dealing with neutral lipoids (fat-like substances)*

of the ovaries and testes of blue and finback whales. The material was collected and frozen on a whaler and kept at  $-0^{\circ}$  C. to  $-20^{\circ}$  C. till investigated. The neutral lipoids were extracted with ether according to the method of Ogata and Hirano, and examined for the presence of compounds occurring in small amounts. Procedures and lists of isolated substances, etc., are given. Bibliographical footnotes.

Note on the "relatively independent behavior of "deep and superficial tissues in a cold environment, based on experiments in exercise to produce heat when hands were chilled. Bibliography (5 items).

*Copy seen:* DLC.

**27506. WYNDHAM, C. H., and W. G. WILSON-DICKSON.** Physiological responses of hands and feet to cold in relation to body temperature. (Journal of applied physiology, Sept. 1951. v. 4, p. 199-207, diagrs.)

Experiments on subjects in full protective clothing, exposed in three-hour experiments at sea to ambient temperatures down to  $-12^{\circ}$  C. with varying wind, showed rapid and marked cooling of hands and feet during rest periods. After such cooling, the hands and feet consistently rewarmed when body heat content was restored as a result of comparatively light physical work. Thus the reflex control of blood flow appears to exert a dominating effect on extremity temperatures in cold. With the body heavily clad and body temperature raised by vigorous work, even bare hands were prevented from cooling; with body scantily clad, even raised rectal temperature did not prevent some hand cooling. Bibliography (12 items).

*Copy seen:* DLC.

**27507. WYNNE-EDWARDS, V. C.** The fulmars of Cape Searle. (Arctic, July 1952. v. 5, no. 2, p. 105-117, illus., col. plate, map)

Contains summary of earlier observations and references to the fulmar colony at Cape Searle (67°13' N. 62°30' W.) on the east coast of Baffin Island; a general account of the fulmar, its three geographical races, their characteristics (size of bill, build, coloration) and distribution (one in the North Pacific and two in the North Atlantic). Notes from the author's trip to Cape Searle in Aug. 1950, are given, his observations and estimate of the colony (minimum: upward of 200,000) its composition, etc. Bibliography (13 items).  
**Copy seen:** DLC.

**27508. WYNNE-EDWARDS, V. C.** Wheatears in the Mackenzie Mountains, District of Mackenzie, N. W. T. (Canadian field-naturalist, Mar.-Apr. 1952. v. 66, p. 67)

Contains a field record of *Oenanthe* from 6000 ft. elevation at about 64°20' N. 128°20' W. in the Mackenzie Mts., July 1944. This extends the bird's known range considerably to the southeast.

illus.) **Title tr.:** The struggle against puddles on airfields.

The very varied microrelief in the areas of permafrost due to mounds, holes, puddles, etc., makes it necessary to increase the development of summer airfields. Particularly puddles have to be eliminated, the depressions carefully cleared of peat and re-filled with non-porous soil. These wet spots re-form and should be treated during the dry season, in spring before (or in the fall after) the heavy rains. Troublesome stone deposits should also be removed and the holes thus created should immediately be filled with non-porous soil. **Copy seen:** DLC.

**27549. ZELENIN, DMITRIĬ KONSTANTINOVICH, 1878-** Obychai "dobrovol'noi smerti" u primitivnykh narodov. (In: Akademiâ nauk SSSR. Institut étnografii. Pamiaty V. G. Bogoraza (1865-1936), 1937, p. 47-78) **Title tr.:** The custom of "voluntary death" among primitive peoples.

Author develops the case that in speaking of the "voluntary death" among the Chukchis, Bogoraz (and other authors) have confused the practice of suicide in

the class society with examples of the survival of the archaic voluntary death of old and sick people. In former times, such persons were left to die or were directly killed, and such a violent death was considered both heroic and normal, so that old people themselves asked for it. In a society passing to the sedentary way of life and division of labor on the other hand, natural death came to be considered normal, and long-lived old persons became objects of the "cult of ancestors". To a later period belongs the "voluntary death" as a personal act of revenge, and as a means of class struggle.

**27550. ZELENIN, DMITRIĬ KON-STANTINOVICH, 1878-** . Tabu slov u narodov vostochnoi Evropy i Severnoi Azii, chast' 1-2. (Akademiia nauk SSSR. Muzei antropologii i étnografii. Sbornik, 1929, t. 8, p. 1-151; 1930, t. 9, p. 1-166) **Title tr.:** Tabu words among the peoples of the eastern Europe and northern Asia, pt. 1-2.

*Contains a comparative ethnological study. Pt. 1, Prohibitions in hunting and other occupations, deals with the widespread belief that wild animals can hear and understand human speech; therefore the hunter must not mention animals by real name but must use substitutes, names or words in a foreign language (hence the development of the hunters' secret language); animals have an acute sense of smell and dislike the odor of women's menstrual blood and other secretions. Therefore, hunters must stay away from women immediately before going on a hunt, or must purify themselves by fumigation and washing; the ceremonies performed for a slain animal are to help its rebirth; the spirit of the forest rules over wild animals, therefore the hunter must avoid offending this spirit (e. g. by mention of objects of Christian worship), or cheating him. These tabus the author shows have no connection with totemism, or animism, or animal worship; they derive simply from an exaggerated conception of wild animals' sense of hearing and smell. Throughout the study are many references to such beliefs and customs among the Yakuts, Aleuts, Ob-Ugrians, Zyryans, Tungus, Yukaghirs, Golds, Samoyeds, Lapps, and others.*

*Pt. 2, Prohibitions in domestic life, deals with the magic power of some words, e. g. names for domestic animals,*

*plants, fire and water, the names of diseases, spirits, gods and magicians, personal names of the living and dead, etc. Such words may not be used freely or carelessly, lest some mischief or misfortune befall. Summary in German (to pt. 1 only) t. 8, p. 146-51.*

*Contains account and appraisal of the career of Bogoraz who began his ethnographic work in 1889 when a political deportee in the Kolyma district of Yakutia. There he took records of folkloristic and dialect materials from the Russians on the River Kolyma. His ethnographic field work also began among these people but his life work became the study of the Chukchis. He was however, of the imperial regime and did not offer sociological analyses. Further he was influenced by the views of some American ethnographers, and by the fact that he was a literary man (a writer of prose and poetry) rather than a scientist. Brief biographical data are added.*

*An extensive monograph, based on 25 years' work on Russian seas by the author and his students. The first part is devoted to the arctic seas: general characteristics (p. 11-44); Barents Sea (p. 45-138); White Sea (p. 139-66); Kara Sea (p. 167-89); Laptev Sea (p. 190-94); and Chukchi Sea (p. 195-99). For each sea is given its general characteristics, history of its exploration; physico-geographical, hydrological, hydrochemical and geological characteristics; flora and fauna (plankton: composition, distribution, migration, food value, etc.; benthos: kinds, composition, distribution; biomass, etc.; the fish fauna: general composition; commercial fishes, their growth, food, migrations, etc.; fisheries); zoogeography. At the end (p. 519-38) is a bibliography for all parts of the volume (over 1000 items), also (p. 562-83) an index of species, as well as the usual subject-geographic and author indexes. Vol. 1 of this work has not been located, its scope is indicated (v. 2, p. 8) as: general oceanography, marine biology, ecology and zoogeography in general.*

Dal'nego Vostoka, 1935. vyp. 13, p. 83-88.

**Title tr.:** On whale fetuses.

Forty-five pregnant females and their fetuses were studied and the age of the latter estimated. On the basis of these studies conclusions are made as to the period(s) and areas of mating, duration of pregnancy; sexual maturity in adults, sexual differentiation in embryos and the rate of growth of the latter. This work results from trips in both arctic and antarctic whaling grounds of the Soviet "floating factory" whaler *Aleut*. Summary in English. **Copy seen:** DLC.

Trudy, 1940. t. 5, vyp. 3-4, p. 519-991, illus.) **Title tr.:** River fauna and water reservoirs: the problem of reconstruction of the fauna of rivers under the influence of hydrotechnical construction.

**Contents (tr.) include:** Chap. 7 (p. 698-722). Hydro-biological investigation of rivers of Kola Peninsula (Varzuga and Umba). 8 (p. 722-54). Comparative characteristics of faunistic living conditions in rivers, inundated estuaries and water basins. 9 (p. 754-853). System-

atic ecological estuaries and water-reservoirs. 10 (p. 858-919). Comparative survey of biocenoses of the same. 11 (p. 919-42). Influence of hydrotechnical construction on the biological régime and fauna of rivers. General and theoretical problems discussed include: the zoogeographical origin of the fauna studied; the imprint of the glacial period; penetration of marine forms into the fresh waters; biocenoses and biomes (including biomes of the northern rivers); theoretical basis for prognoses on changes due to hydrotechnical interference such as: construction of new channels, reservoirs, lakes, ponds, etc. Dealing with the vital problem of the productivity of fresh waters, the author shows the problem to center around the stocking of water with organic material, which he terms "accumulation". With the increase of "accumulation" there is an increase of biological productivity of the bottom fauna up to a certain, optimal, point. When "accumulation" increases further, a decrease in productivity of the bottom fauna takes place. Practical implications and applications of this theory are suggested. Author also defines the term hydrobiology to include not only the organism, environment relation, but also the laws governing the biological processes in a body of water and the body of water as a whole, from the biological standpoint. Bibliography (about 450 items). Summary in English, p. 982-91. **Copy seen:** DLC; MH-Z.

**Contains** a study of deflection in the structure of multicellular sporangia of *Pyraliella litoralis*, a brown algae widely distributed in the Barents Sea, and a comparison with similar phenomenon described by P. Kuekuek in *Ectocarpus siliculosus*.

**Copy seen:** MH-F.

**27614. ZINOVA, ELENA STEPANOVNA, 1874-1942.** Morskie vodorosli Komandorskich ostrovov. (Akademiia nauk SSSR. Tikhookeanskii komitet. Trudy, 1940. t. 5, p. 165-238, 11 illus.) **Title tr.:** The algae of the Commander Islands.

**Contains** report on seaweeds collected on numerous expeditions during the period 1871-1932. The general part (p. 169-75) offers data on the position, size and shores of the islands; the surrounding sea, its temperature, salinity, tides, and currents; meteorology; ice conditions and a general outline of the zones of seaweeds (according to depth). The special part (p. 176-238) deals with the morphology of the algae (in taxonomical order) anatomy, occurrence and distribution. 174 species are dealt with; eight represent new species or forms. Of all the species 134 are found also on the coasts of North America, 104 in the Sea of Japan, 95 in southern Kamchatka, 69 in the Sea of Okhotsk, 66 in the northern Bering Sea, and one in the southern Pacific, suggesting that the islands received a constant influx of seaweeds through current, traffic and driftwood. "Ice under alluvial deposits is often referred to as ground or buried ice. Ground ice is commonly found in the permafrost areas of Eastern Siberia and Alaska, and its preservation is usually

attributed to stable climatic conditions. Ground ice falls into two basic categories, ice older than its alluvial cover and ice younger than its cover. Old ground ice includes inactive glaciers, buried firn, dirt-covered snow patches and névés, and buried naleds, frozen lakes and marshes. Young ground ice covers ground ice formed as a result of condensation, ice formed in rock fissures, and islands of ice trapped between the ground surface and the upper permafrost layer.—SIPRE. **27622. ZUBOV, NIKOLAI NIKOLAEVICH.** Arctic ice and the warming of the Arctic; being chapters VI and VII of In the center of the Arctic, an outline of the history of arctic exploration and of the physical geography of the central Arctic. Northern Sea Route Directorate Press, Moscow-Leningrad, 1948. Translated by E. Hope. Ottawa, Defence Research Board, 1950. 2 p. l., 72, [4] p. 2 fronts. (maps) illus., 9 plates, errata sheet at end.

In these chapters, "the formation, variation, and movement of arctic ice are presented. The formation of sea ice is traced from the appearance of fine ice needles to the development of ice-fields. Conditions effecting the disintegration of ice include the absorption of heat from the atmosphere and surrounding water, absorption of solar heat, and decrease in concentration of the solution contained in the brine cells. The formation of permafrost is determined by severe winter conditions and a scanty snow cover to protect the ground from freezing. A general warming of the Arctic is indicated by the retreat of glaciers, higher atmospheric temperatures, decrease in the amount of ice, and various biological symptoms."—SIPRE.

For contents of Zubov's entire book see *Arctic Bibliography* No. 19994.

**27623. ZUBOV, NIKOLAI NIKOLAEVICH.** Dinamicheskaia okeanologiya. Moskva-Leningrad, Gidrometeorologicheskoe izd-vo, 1947. 430 p., diagrs., maps (1 fold.) **Title tr.:** Dynamic oceanology.

A comprehensive, scientific monograph with the following sections: (1) Some properties of sea water. (2) Principal

surfaces and forces in the sea. (3) Mixing of sea waters. (4) Waves in the ocean. (5) Tidal phenomena. (6) Tidal phenomena and ice. (7) Sea currents. (8) Wind and the movement of ice. (9) The ocean surface. (10) Conceptions on the general circulation of the atmosphere and the ocean. In addition to scattered information on polar conditions, chapters 6 (p. 241-56) and 8 (p. 336-53) are entirely devoted to arctic problems. They contain (chap. 6) general concepts; the influence of ice upon the tides; effect of the tides on the freezing and the ice cover of the sea; tidal cracks in the ice; tidal phenomena and stamukh ice (a single piece of ice stranded on a shoal or a shore); tidal movements of the ice; tidal compression of the ice; the concept of the "ice-hour" (mean time-interval between the culmination of the moon and the following ice compression); significance of tides for navigation in ice; tidal ice-charts; (chap. 8) drift caused by wind; drift of ice-fields (splochnyye l'dy); drift of an individual ice-floe; drift of broken-up ice; compressing and decompressing winds; ice drifts along isobars; ice movements across the baric systems. Bibliography (130 items).

**27624. ZUBOV, NIKOLAI NIKOLAEVICH, and K. S. BADIGIN.** Razgadka tajny Zemli Andreeva. (Priroda, Feb. 1952. v. 41, no. 2, p. 89-101, maps) **Title tr.:** Solution of the mystery of Andreev Land.

Contains an analysis of documents, especially the recently discovered report and log of Stepan Andreev's second voyage (1764) to the Bear Islands (Medvezh'i Ostrova, 70°50' N. 161°36' E. in East Siberia Sea) and beyond. According to these documents, Andreev saw the island, Novaya Sibir, 42 years before the accepted date of its discovery. Authors include accounts of Andreev's two voyages (1763, 1764) and the later search for "Andreev's Land" of which he believed he had seen indications, northeast of Bear Islands, 73° N. 170° W.; quotations from his notes and logs and their interpretation, etc. are given. Bibliography (7 items).

**27626. ZUEV, VASILII FEDOROVICH, 1754-1794.** Materialy po ètnografii Sibiri XVIII veka, 1771-1772. Moskva-Leningrad, 1947. 96 p. 5 illus. (Akademiia nauk SSSR. Institut ètnografii. Trudy, novaiia seriia, t. 5) **Title tr.:** Materials on ethnography of Siberia of the 18th century, 1771-1772.

Contains a foreword by N. N. Stepanov, and a biographical sketch with comments (by G. D. Verbov) of the academician Zuev (1754-1794) who took part as a young student in the expedition of P. S. Pallas across Siberia in 1769, and whose paper, *Opisanie zhivushchikh v Sibirskoi gubernii v Berezovskom uезде inovercheskikh narodov Ostiakov i Samoyedov* (A description of inhabitants of government of Siberia, in Berezov district, peoples of different religion, the Ostyaks and Samoyeds), written in 1771-72, is published here for the first time. It comprises 21 chapters on: dwellings, language, territorial boundaries of the Ostyaks, and Samoyeds, their origin and physical characteristics, clothing and ornamentation, way of life and economy (dressing of hides), crafts, food and beverages, sickness, laws, shamans, Samoyedic oaths (four texts with Russian translation), customs and behaviour, merry-making, courting and marriage, life of women, childbirth, burial, fishing (native names for fish), hunting, bird-catching, etc.; and finally an account of natural conditions in the area inhabited by these peoples in the Lower Ob basin: its weather, plants, auroras, visibility, etc. Appended is a shorter paper *Ob olenakh* (On reindeer), with a sketch

showing the animals in sledge harness.

discoveries*

Ergeb.—Ergebnisse - *results*

ethnograph.—ethnographische - *ethno-  
graphic*

ethnol.—ethnology

étnograf.—étnograficheskii - *ethno-  
graphic*

exped.—expedition(s)

explor.—exploration(s)

f.—für — *for*  
 finländ.—finländische — *Finlandic*  
 Förbered.—Förberedelse (—erna) —  
*preparation(s)*  
 försten.; forsten.—förstening (—en;  
 —ar); forstening (—er) — *fossil(s)*  
 förteckn.—förteckning — *list*

G.—Gulf (in geographic names)  
 g.—gora — *Mountain*  
 g.; gg.—god(a) — *year(s)* following dates  
 geog.—geography; geographical; geo-  
 grafische; geografiska; geografis;  
 geograficheskii  
 geol.—geology; geological; Geologie;  
 geologiske; geologiske; geologi;  
 geologicheskii  
 geomorf.—geomorfologi;  
 geomorfologicheskii — *geomorphology; geo-  
 morphological*  
 geomorph.—geomorphology; geomor-  
 phological  
 Gesell.—Gesellschaft — *Society* (in  
 names of institutions)  
 gidrograf.—gidrograficheskii — *hydro-  
 graphic*  
 gidrol.—gidrologi;  
 gidrologicheskii — *hydrology; hydrological*  
 gidrometeorol. — gidrometeorologi-  
 cheskii — *hydrometeorological*  
 glaciol.; glaziol.—glaciologiske; gla-  
 ziologiske — *glaciological*  
 Gt.—Great (in geographic names)  
 gub.—guberniä — *government district*

Halbins.—Halbinsel — *peninsula*  
 hist.—history; historical; historische  
 hydrograf.—hydrografiska; hydro-  
 grafische; hydrographique(s) —  
*hydrographic*  
 hydrol.—hydrologique(s); hydrolo-  
 giske — *hydrological*

I.—Island(s) (in geographic names)  
 iakttag. (iagttag.)—iakttagelse (—n;  
 —r) — *observation(s)*  
 Ins.—Insel(n) — *Island(s)*  
 insaml.—insamlade — *collected*  
 invest.—investigation(s)  
 issled.; izslēd.—issledovanie; izslē-  
 dovanie — *exploration*  
 ūzh.—ūzhnyi — *southern, or south  
 as an adjective*

Kennt.—Kenntnis — *knowledge*  
 khoz.—khoziästvo — *economy; estab-  
 lishment; farm*  
 khr.—khrebet — *mt. range*

L.—Lake(s); Lower (as part of geo-  
 logic era); Land (in geographic  
 names)

m.—mys — *cape*  
 M.—Middle (as part of geologic era)  
 magnēt.; magnet.—magnétisme; ma-  
 gnétique(s); magnetische — *magnetic*  
 meteorol.—meteorology; meteorologi-  
 cal; Meteorologie; meteorologiske;  
 meteorologiska; meteorologi;  
 meteorologicheskii  
 mineralog.—mineralogisk  
 Mitteil.—Mitteilung (—en) — *report(s)*  
 monograf.—monografiä; monogra-  
 fischeskii — *monograph; monographic*  
 Mt.—Mount  
 mts. (Mts.)—mountains

N.—north; northern; the North  
 nablūd.—nablūdenie (—iä) — *obser-  
 vation(s)*  
 naturwiss.—naturwissenschaftliche —  
*natural history (etc. used as adjective)*  
 nauch.—nauchnyi — *scientific*  
 NE.—northeast; northeastern  
 nördl.—nördlich — *northern; north-  
 erly*  
 nordv.—nordvestra — *northwestern*  
 NW.—northwest; northwestern  
 NWT.—Northwest Territories

o.; o—va; o—ve (and other case end-  
 ings)—ostrov — *Island* (in geographic  
 names)  
 O.—Ocean(s)  
 obl.—oblast' — *region; district; territory*  
 observ.—observation(s); observation  
 (—en; —er); observations  
 ok.—okean — *Ocean* (in geographic  
 names)  
 omkr.—omkring — *around; about*  
 opred.—opredelenie (—iä) — *determi-  
 nation(s)*  
 ornithol.—ornithology; ornithologi-  
 cal; ornithologiske; ornitholo-  
 gique

ornitol.—ornitologi; ornitologisk, —  
*ornithology; ornithological*  
 o—va; o—vov; o—vakh (and other case  
 endings)—ostrova — *Islands* (in geo-  
 graphic names)  
 oz.—ozero — *Lake* (in geographic  
 names)

paleobot.—paleobotany; paleobotan-  
 ical; paleobotanische  
 paleogeog.—paleogeography; paleo-  
 geographical; paleogeographische;  
 paleogeografiā

paleon.—paleontology; paleontolo-  
 giā; paleontologicheskii  
 paleozool.—paleozoologische — *pale-  
 ontological*

Pen.—Peninsula

petrog.: petrograf.; Petrog.—petro-  
 grafiā; petrograficheskii; petro-  
 grafisk

petrograph.—petrographische; Petro-  
 graphie

petrol.—petrologicheskii — *petrologic*

p—ov—poluostrov — *peninsula*

phytogeog.—phytogeography; phyto-  
 geographic

Pr.—proliv (—a) — *strait(s)*

Pr.—Prince (in geographic names)

predvar.—predvaritel'nyi — *prelimi-  
 nary*

Prelim.—preliminary; prélimi-  
 naire(s)

r.—reka — *river*, also *River(s)* in geo-  
 graphic name

R.—River(s) in geographic name

S.—south; southern

Sd.—Sound (in geographic names)

SE.—southeast; southeastern

sev. (siev.); Sev.—severnii (siev-  
 nyi); Sever — *northern; the North*

sev.—vost. (siev.—vost.)—severo—vos-  
 tochnyi — *northeastern*

skan.—skandinavisk — *Scandinavian*

St.—Strait (in geographic names)

St. (Ste.)—Saint(e)

stratig.—stratigraphische — *strati-  
 graphic*

suppl.—supplement

sv. (Sv.)—sviatoi; Sviatofa — *Saint(e)*

SW.—southwest; southwestern

terr. magnet.—terrestrial magnetism

topograf.—topografisk; topografi-  
 cheskii — *topographic*

u.—und — *and*

U.—Upper (as part of geologic era)

Umgeb.—Umgebung (—en) — *environ-  
 ment*

unders.—undersøgelse (—r); under-  
 søkelse; undersökning (—en; —ar)  
 — *investigation(s)*

univ.—university; Universität; uni-  
 versitet

Untersuch.—Untersuchung (—en) —  
*investigation(s)*

v.—von; vom — *from; of; by*

växtgeog. — växtgeografisk

Verbreit.—Verbreitung — *distribution*

Verhältn.—Verhältniss(e) — *relation(s);  
 condition(s)*

vorl.—vorläufige — *preliminary*

vost.—vostochnyi — *eastern*

W.—west; western

wiss.—wissenschaftliche — *scientific*

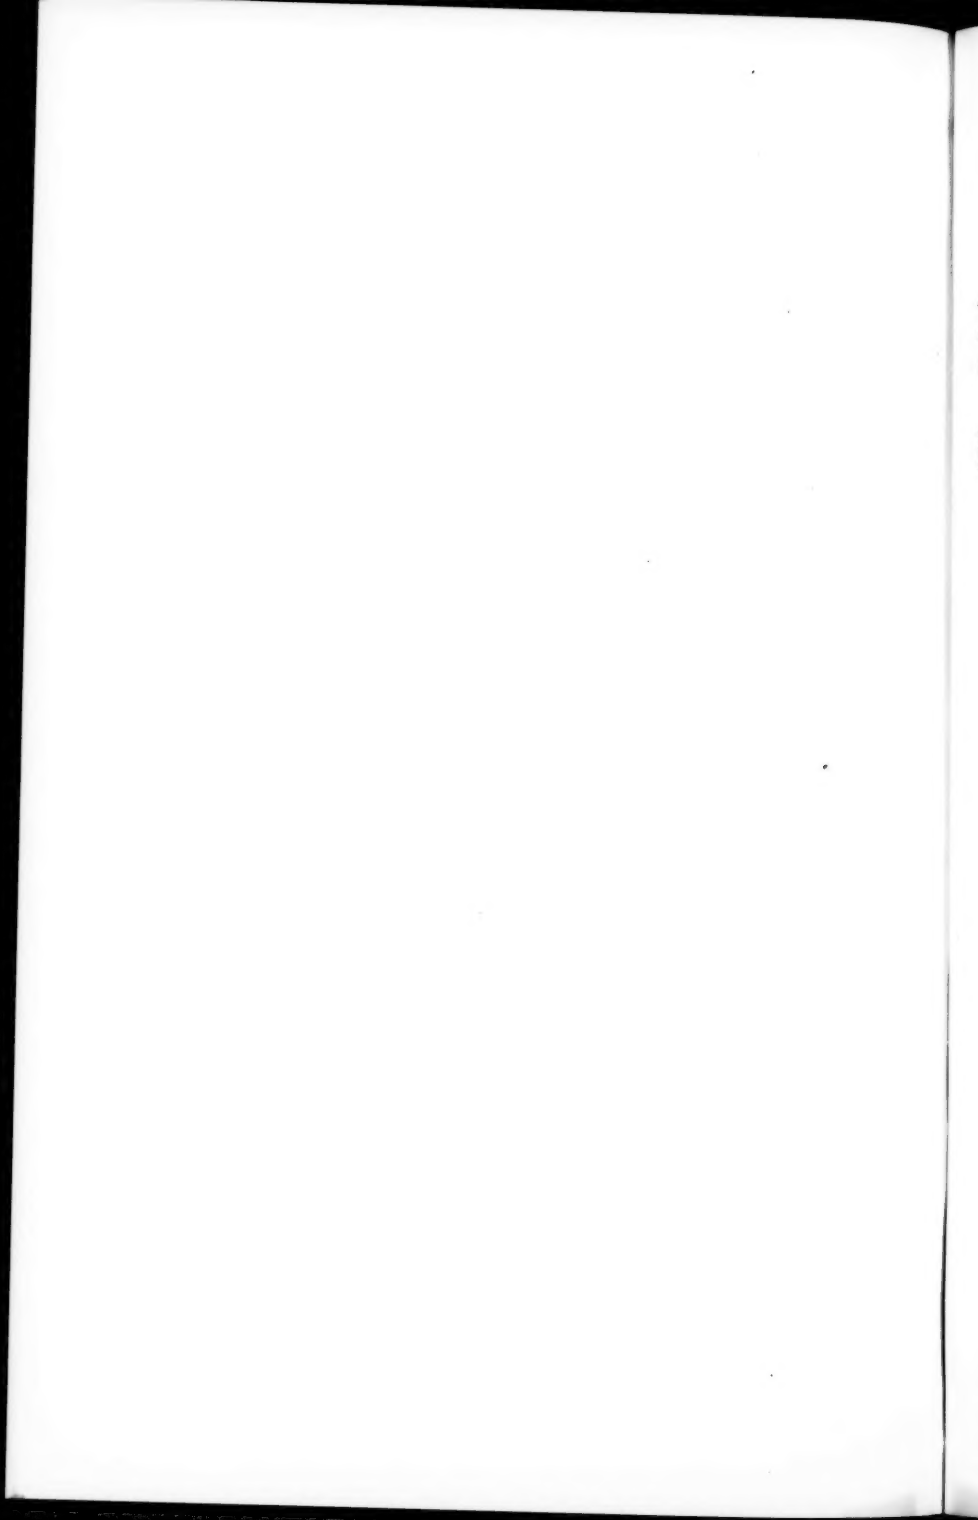

z.—zur; zum — *to, toward*

zal.—zaliv — *gulf*

zap.—zapadnyi — *western*

zem. magnet.—zemnoi magnetizm —  
*terrestrial magnetism*

zool.—zoology; zoological; Zoologie;  
 zoologische; zoologiska; zoologiā;  
 zoologicheskii
